Japan Platform for Patent Information

J-PlatPat

What you can do with J-PlatPat

You can check whether the same idea has already been applied for.

For example, before applying, you want to check the patent information that has already been published and decide whether to continue with your application.

First, let's try performing a simple search using keywords to check whether a similar idea has already been applied for.

Reference >>

2.1 Searching Industrial Property Rights Information [Simple Search]

You can check the contents of an application using the application number found on goods.

For example, you saw the words "Patent Pending XXXX-XXXXXX" on goods, and you want to check what kind of patent it is.

Let's try searching for the contents of the patent using the application number.

Reference >>

5.1 Searching for Patents and Utility Models by Document Number [Patent/Utility Model Number Search/OPD]

You can check the summaries of ideas that have already been published.

For example, you want to check the recent trends in your field of development.

Let's try narrowing down the results using a combination of multiple search items, such as the date and the theme.

Reference >>

5.2 Searching Patents and Utility Models by Keyword [Patent/Utility Model Search]

You can check the examination status and results for patent applications by other companies.

For example, you want to check the status after filing (Request for examination, Provision of information, examination result, etc.).

Let's try seeing the current progress of applications on History Information.

Reference >>

4.2 Searching History Information

You can check whether a new design for goods infringes on the rights of another company.

For example, before starting the production of new goods, you want to check whether the design for your goods is similar to the registered design of another company.

Let's try searching publications by the name of the goods you want to check.

Reference >>

6.2 Searching Designs by Keyword
[Design Search]

You can check whether a goods name is already a registered trademark.

For example, when deciding on a name for new goods, you want to check whether it is the same as a trademark owned by another company.

Let's try checking whether the name for the new goods has already been applied for or registered.

Reference >>

7.2 Searching Trademarks by Keyword
[Trademark Search]

You can confirm the current status of appeals by rival companies and understand the reasons for refusal.

For example, you want to know what happened when a rival company made an appeal against examiner's decision of refusal.

Let's try searching for trial decisions with the trial decision search.

Reference >>

8.1 Searching Trial Decisions and Judgment Gazettes [Trial Decision Search]

You can check the patent classifications provided with the FI and F-terms in published patent gazettes.

For example, you want to check the details for the patent classification assigned to your own patent application.

Let's try searching for the details of the FI or F-term.

How to Use This Manual

Intended Audience

This manual is designed for parties who wish to use J-PlatPat to search for information on industrial property rights.

Required Knowledge

The following knowledge is necessary for using this manual.

- Basic knowledge of using a computer or a mobile device
- Basic knowledge of executing searches using typical search sites

Manual Organization

The J-PlatPat manual contains the following items.

J-PlatPat Operation Manual (this document)

Provides an overview of and explains how to operate J-PlatPat. Details for items to be entered can be found in Help on each screen.

J-PlatPat Help

Explains screens, items to be entered, and so on in J-PlatPat.

About Notation

This manual uses the following notations.

- "Japan Platform for Patent Information" is referred to as "J-PlatPat".
- The four areas of law, that is, "patents", "utility models", "designs", and "trademarks", are collectively referred to as "four law categories".
- "Personal computer" is referred to as a "computer".
- The [xxxx] appended to the ends of titles indicate screen names.
- Italicized text strings such as *xxxx* indicate that the display changes depending on the situation.
- Numbers in the screen examples correspond to step numbers.

Screen Example

7.1 Searching Trademarks by Document Number [Trademark Number Search]

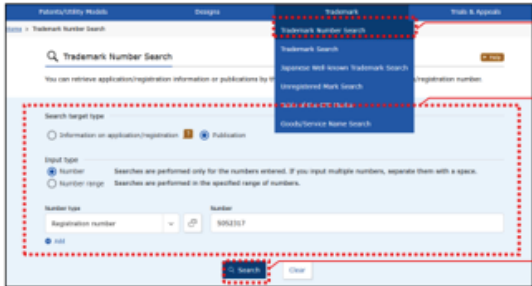

7.1 Searching Trademarks by Document Number [Trademark Number Search]

This section explains how to search trademark publications by entering document numbers such as application numbers.

Operation Example

Search for trademark registration number "5052317".

Step Number → 1. Select "Trademark" - "Trademark Number Search" from the global navigation.
⇒ The Trademark Number Search screen appears.

Corresponding Step Number → 1. 2. 3.

2. Enter the search criteria.
In this example, enter the following criteria.

- In "Search target type", select "Publication".
- In "Input type", select "Number".
- In "Number type", select "Registration number".
- In "Number", enter "5052317".

Marks used in this manual indicate the following details.

Attention indicates points to note when using J-PlatPat.

Tip introduces information that is useful to know when using J-PlatPat.

Operation Example indicates an example used when explaining operations.

Glossary indicates guidance for referring to "Appendix B Glossary" (P.186).

Trademarks used in this manual are as follows.

- Microsoft, Windows, Outlook and Excel are trademarks or registered trademarks of Microsoft Corporation in the United States and/or other countries.
- Adobe, Acrobat, Reader, and Adobe Reader are trademarks or registered trademarks of Adobe Systems Incorporated in the United States and/or other countries.
- Other company names, product names, and the like are trademarks or registered trademarks of the respective companies.

About Screen Examples

Please note the following points about the screen examples used in this manual.

- The screen examples used in this manual assume that the screens are displayed on a typical computer screen (with a horizontal resolution of 1,080 px or higher).

Note that the screen examples used in this manual may have differences from the actual screens.

How to Read This Manual

This manual should be read in the following order.

- For first-time users of J-PlatPat
 - (1) ["Chapter 1 About J-PlatPat" \(P.15\)](#)
 - (2) ["Chapter 2 Let's try it out Simple Search" \(P.25\)](#)
 - (3) ["Chapter 3 Basic principles of J-PlatPat" \(P.29\)](#)
 - (4) ["Chapter 4 Common Operations" \(P.41\)](#)
 - (5) Operation of law-specific service menus
 - Patents/Utility Models: ["Chapter 5 Patents and Utility Models" \(P.77\)](#)
 - Designs: ["Chapter 6 Designs" \(P.127\)](#)
 - Trademarks: ["Chapter 7 Trademarks" \(P.141\)](#)
 - Trial & Appeals: ["Chapter 8 Trial & appeals" \(P.171\)](#)

Viewing PDFs

A PDF viewer such as Adobe® Acrobat® Reader is required to view PDFs. See the manual of your PDF viewer for how to operate the viewer.

About J-PlatPat

This chapter provides an overview of J-PlatPat.

1.1 About J-PlatPat	16
1.2 How to Use J-PlatPat	18
1.3 Accessing J-PlatPat	21
1.4 Layout of the Screen	22

1.1 About J-PlatPat

National Center for Industrial Property Information and Training (INPIT) provides "J-PlatPat (Japan Platform for Patent Information)" as a service where anyone, at anytime, anywhere can search industrial property information for free over the Internet.

J-PlatPat provides industrial property information, including official gazettes and foreign gazettes on patents, utility models, designs, and trademarks issued by the Japan Patent Office (JPO) since the Meiji era, as well as progress information that allows you to easily check the examination status of each application. Please note that the information available on J-PlatPat is limited to gazettes issued by the JPO and foreign gazettes. Therefore, please note that if a gazette has not been published, you will not be able to search or inquire.

J-PlatPat also plays a role as a new information infrastructure that provides industrial property information through enhanced search functions and user interface, as well as a link to the JPO system, which enables users to efficiently find the industrial information they are seeking.

Our goal with J-PlatPat is to provide a user-friendly service where users can simply drop in and find the information immediately.

Tip

About industrial property information

Industrial property information refers to the information released in publications by JPO and the history information thereof. This information relates to applications that have been submitted for inventions and ideas (patents and utility models), designs, and trademarks.

Industrial property information is useful when you have a new idea, when you need information about the newest technology, when you come up with a great design, or when you need to name a new product. Does it already exist? Has it been registered? Looking up this information can be highly valuable.

 Tip**Benefits of utilizing industrial property information**

You can benefit from utilizing industrial property information in the following ways:

- **Checking rights**

The most important feature of industrial property information is that it is information about rights. If your business carries on without checking rights information, you could suddenly find yourself sued for infringement and ordered to pay compensation.

- **Preventing waste in development**

If you have a firm grip on the patents held by other companies, you can avoid developing products within the scope of those rights, and instead focus on research and development and business expansion that will benefit your business. In this sense, industrial property information is absolutely essential for determining your business's objectives for technological development.

- **Obtaining information on the newest technology**

Applications for patents on new technology are continually applied for, and the information on that technology is, after a certain period of time, released. Therefore, by obtaining information on new cutting-edge technology and using it to your advantage, you can improve the efficiency and pertinence of your research, development, and expansion into new fields of business.

1.2 How to Use J-PlatPat

According to the aforementioned purpose and intended usage of J-PlatPat, a few general rules have been laid out for using the service. Before using the service, we ask that you please read the following information and cooperate with our guidelines for appropriate usage of the service.

Searching with J-PlatPat

J-PlatPat is intended only for standard search/usage of basic information related to industrial property rights. Therefore, the provided information and search functions are limited to standard usage purposes only. For advanced searches or information with a high added value (i.e. professional use), it is recommended to use other services such as those offered by commercial patent information service providers.

Notes Regarding Browser Settings

In order to use J-PlatPat, the following browser settings must be enabled.

- Enable display of pop-ups (set J-PlatPat as a trusted site)
For how to configure the settings, see "FAQ" on the top page of J-PlatPat.
- Enable JavaScript
This is enabled in the default settings of the browser, so if you are still using the default settings of the browser, it is not necessary to change the settings.
For how to configure the settings, see Help for the browser you are using.
- Enable TLS1.2
This is enabled in the default settings of the browser, so if you are still using the default settings of the browser, it is not necessary to change the settings.
For how to configure the settings, see Help for the browser you are using.
- Enable cookies
This is enabled in the default settings of the browser, so if you are still using the default settings of the browser, it is not necessary to change the settings.
For how to configure the settings, see Help for the browser you are using.
- Enable local storage
This is enabled in the default settings of the browser, so if you are still using the default settings of the browser, it is not necessary to change the settings.
For how to configure the settings, see Help for the browser you are using.

Additionally, when using Firefox®, you may not be able to display PDFs within the browser.

In order to display PDFs within the browser, access "Tools" - "Options", and in "Program" change the handling method of PDF documents (PDF) to "Preview in Firefox".

Restrictions on excessive access/access by robots

Information about industrial property rights is available on J-PlatPat for public use. Therefore, downloads of large volumes of data and access by robots (periodic automatic data collection by computer programs), which may interfere with the usage of normal users, are prohibited. If the aforementioned inappropriate conduct or other similar conduct is discovered, your access to J-PlatPat will be restricted without prior notice, so please take note of this fact.

About Links

Generally, creating a link to J-PlatPat is permitted, however please contact the National Center for Industrial Property Information and Training before creating a link.

TEL: 03-3581-1101 (Extension) 2413

e-mail: ip-jh05@inpit.go.jp

However, for websites whose contents or operations correspond to any of the following, we ask that you do not link to our service.

- Websites which are in violation of public policy
- Websites which are in violation of laws or ordinances, including contents which are at risk of being deemed violations
- Websites which create links which do not make it clear that J-PlatPat is a free-of-charge service provided by the National Center for Industrial Property Information and Training (for example, links which display the contents of J-PlatPat as part of a frame within a website or which include a link to J-PlatPat as part of a paid service)

Furthermore, when creating a link to J-PlatPat, clearly state that the link is a link to the website of the National Center for Industrial Property Information and Training.

Copyrights

The patent claims, descriptions, text of overviews, drawings, or other information published in the publications provided by J-PlatPat are, generally speaking, the intellectual property of the original creator such as the applicant. Therefore, it may be necessary to receive permission before re-publishing the materials.

The copyrights related to the contents published in the Journal of Technical Disclosure (Japan Institute for Promoting Invention and Innovation) are held by the corporations (individuals) who disclosed the technology, so please be careful when using any contents obtained from the Journal of Technical Disclosure.

For non-patent documents (excluding the Journal of Technical Disclosure) retrieved during the patent/utility model search, the primary documents that are published are materials for which permission has been obtained from the copyright holder. Similarly, for design publication materials, the corresponding image data of the designs published are materials for which permission has been obtained from the copyright holder. Providing information to third parties (including publication to large parties) or otherwise enabling usage of the materials without prior confirmation of its terms may constitute to copyright infringement so please be careful.

Disclaimer

The National Center for Industrial Property Information and Training makes every effort to ensure that the information provided by J-PlatPat is accurate and up-to-date, however there may still be some typographical errors or omissions, incorrect or missing information, improper translations including machine translation, legal status information including whether IP right is active or not active, or a gap in time between the date when publications are issued and the date when the contents of those publications are provided by J-PlatPat. For the aforementioned reasons, JPO and the National Center for Industrial Property Information and Training do not take responsibility for any damage or injury caused as the result of using the information provided by J-PlatPat.

Changes to the Content

Please note that the contents provided by J-PlatPat may be changed at any time without prior notice.

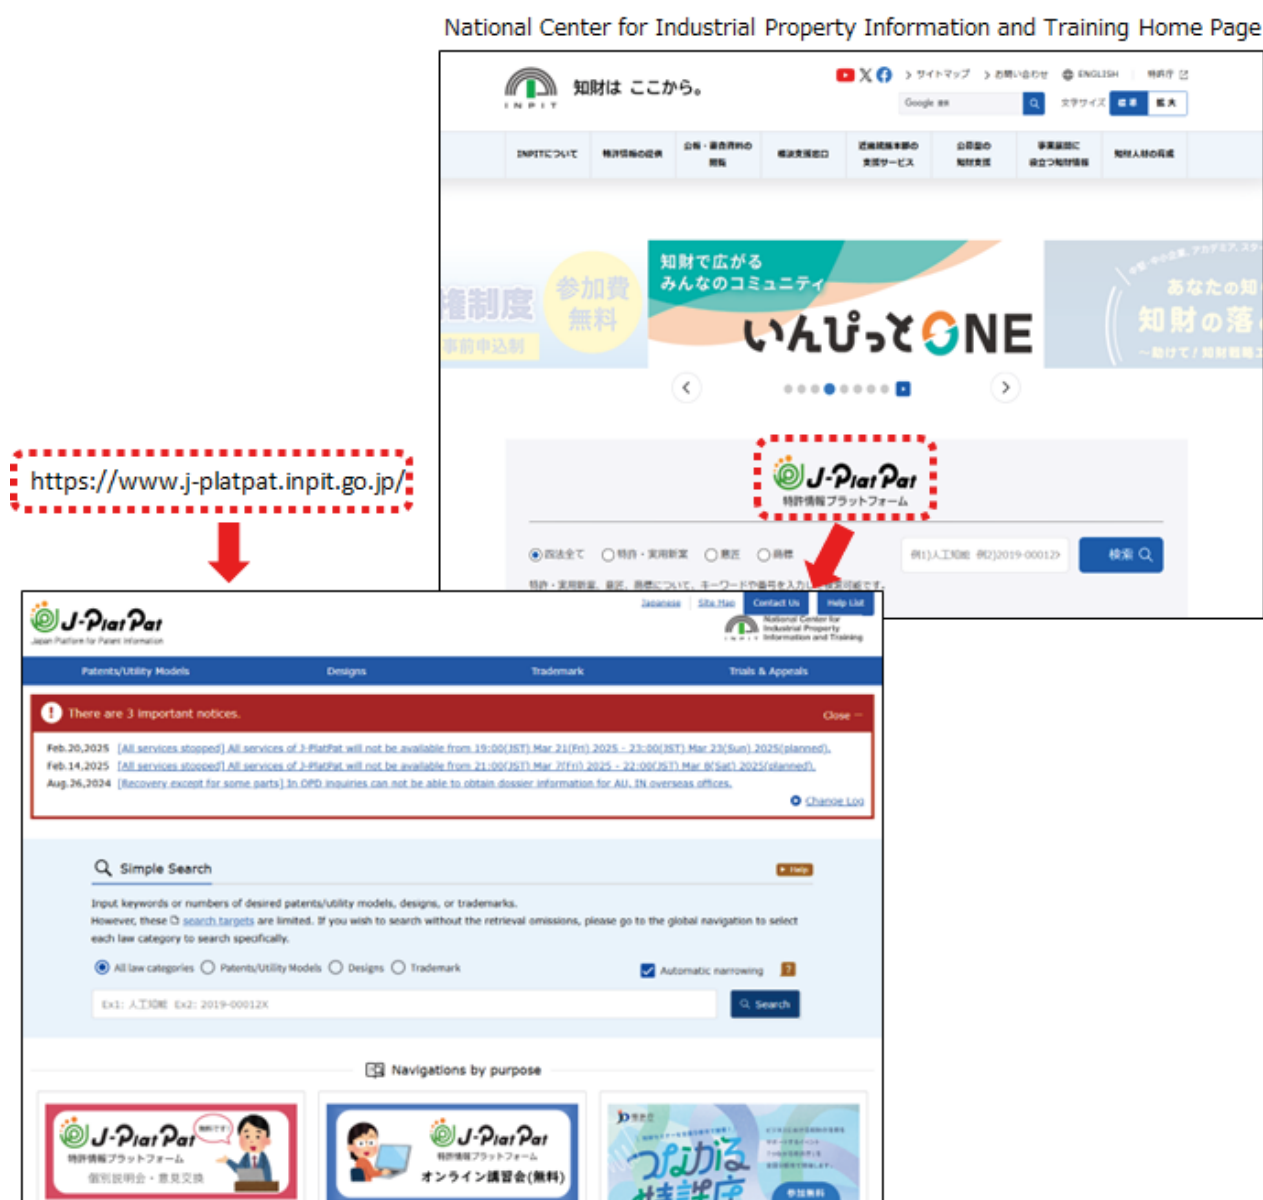

1.3 Accessing J-PlatPat

The URL of J-PlatPat is as follows.

<https://www.j-platpat.inpit.go.jp/>

You can also access on the National Center for Industrial Property Information and Training homepage (<https://www.inpit.go.jp/>).

The top page is displayed in Japanese. Select [English] at the top of the top page to switch to English.

1.4 Layout of the Screen

This section describes the J-PlatPat screen using the top page as an example.

The header and footer are the same across all services. For an explanation of the items on the screen for each service, see Help.

- (1) Click the J-PlatPat logo to display the top page.
- (2) Select "English" to switch to English display mode.
When using English display mode, "Japanese" is displayed and can be used to switch to Japanese display mode.
- (3) Select "Site Map" to display the site map.
- (4) Here is the contact information.
Additionally, there is a "FAQ" page available in the "Reference Information" section at the bottom of the top page. Please see "FAQ" before contacting the help desk. You may be able to resolve the problem yourself by referring to the information in "Frequently Asked Questions".
- (5) Select "Help list" to display the table of contents for the Help.
- (6) Click the logo for the National Center for Industrial Property Information and Training (INPIT) to display the home page of National Center for Industrial Property Information and Training.
- (7) This is the global navigation. Select a service from the menu to switch to the corresponding screen for each service.
- (8) Maintenance information and other important notices are displayed here.
- (9) This is the name of the screen. In this case, "Simple Search" is displayed.
- (10) Click  to display the Help for the screen currently being displayed. In this case, the Help for "Simple Search" is displayed.
- (11) Click  to display hints about the items on the screen. In this case, hints about "Automatic narrowing" are displayed.
- (12) Helpful information and other recommendations for using J-PlatPat are displayed here.
- (13) Events, plans, and other notices are displayed here. Select a link to confirm the details of the notice.
- (14) Select "Change Log" to confirm the history of the articles published in the "Notices" section.
- (15) Document coverage information and other reference information for using J-PlatPat is displayed here. Select a link to confirm the details.
- (16) Seminar/training information related to J-PlatPat is displayed here. Select a link to confirm the details of the event.

- (17) This is a collection of links to home pages that can be used as references for the usage of industrial property rights information.
- (18) Click  to return to the top of the screen.
- (19) Select "Questionnaire" to display a questionnaire page about your usage of J-PlatPat. This questionnaire is provided in order to improve the J-PlatPat service in the future. We thank you for your cooperation.
- (20) Click "Privacy Policy" to confirm our privacy policy. Please read this information before using the service.
- (21) Select "Information on Usage" to confirm important information about using J-PlatPat. Please read this information before using the service.

 Attention

- Do not use the back button on your browser.

If you want to return from the search result list to the main search screen, click  in the bottom right of the screen. The main search screen is at the top of the search result list.

- The gray text displayed in the keyword field is an input example. It is not necessary to erase the gray text from fields with no input (they are automatically recognized as having no input).
- Depending on the size of the screen you are using, **(2)**, **(3)**, **(4)**, **(5)**, and **(7)** may be displayed as  MENU.

Let's try it out

Simple Search

This chapter explains operations of the Simple Search.

See Help for a description of each item in the screen. For how to display Help, see ["Viewing Help"](#) (P.45).

2.1 Searching Industrial Property Rights Information [Simple Search]	26
--	----

2.1 Searching Industrial Property Rights Information [Simple Search]

This chapter explains how to perform a simple search using keywords or numbers, rather than specifying advanced criteria.

Details for the number entry format, search targets when using the simple search, and the like can be found in Help.

Because the simple search has limited search targets, if you want to conduct a more detailed investigation, you will need to select desired service from the global navigation and search with detailed criteria.

Operation Example

Search for industrial property rights information pertaining to "風鈴".

1. Enter the search criteria in "Simple Search" on the top page. In this example, enter the following criteria.

- Select "All law categories".
- Enter "風鈴" in the keyword field.
- Check "Automatic narrowing".

Searching with "Automatic narrowing" checked automatically adds search criteria so that search results exceeding an upper limit of 3,000 are automatically narrowed down to the most recent 3,000 results.

The screenshot shows the 'Simple Search' page of the J-PlatPat system. The page has a blue header with navigation tabs: 'Patents/Utility Models', 'Designs', 'Trademark', and 'Trials & Appeals'. Below the header, the 'Simple Search' section is highlighted with a red dashed box labeled '1.'. Inside this section, there is a search bar with the text 'Ex1: 人工知能 Ex2: 2019-00012X'. Below the search bar, there are four radio buttons for selecting law categories: 'All law categories' (selected), 'Patents/Utility Models', 'Designs', and 'Trademark'. To the right of these radio buttons, there is a checkbox labeled 'Automatic narrowing' which is checked, and a question mark icon. A red line points from the 'Automatic narrowing' checkbox to a red label '2.'. At the bottom right of the search section, there is a blue 'Search' button with a magnifying glass icon, also highlighted with a red dashed box and a red line pointing to it.

2. Click the "Search" button.

⇒ The Search Result List screen appears.

Selecting "All law categories" for the search target makes it possible to switch the law category to be searched using the tabs in the Search Result List screen. Clicking the link in the "Search Result List" for the document number whose details you wish to view brings up the corresponding publication.

Details on the Search Result List screen can be found in Help.

 Tip**How to perform AND searches for keywords and OR searches for document numbers in simple searches**

Entering keywords separated by spaces will perform an AND search, while entering only the document numbers (Patent application number, Publication number, Patent number etc.)separated by spaces will perform an OR search.

- Example of AND search with keywords separated by spaces

風鈴 光

- Example of OR search with space-separated document numbers

2019-00012X 2019-00013X

- If you enter a keyword and a document numbers separated by a space, an AND search will be performed for the keywords

風鈴 2019-00012X

Please refer to ["3.1 AND Search, OR Search, and NOT Search" \(P.30\)](#) for an explanation of AND and OR searches.

In addition, only simple search allows you to enter keywords separated by spaces to perform an AND search.

Please note that when searching for each service from the global navigation, keywords separated by spaces will perform an OR search.

Basic principles of J-PlatPat

3

This chapter explains the basic search methods in J-PlatPat.
Please refer to the help for explanations of the items on the screen.
For detailed instructions, please refer to the Search Tips.

3.1 AND Search, OR Search, and NOT Search	30
3.2 Exact Match and Partial Match	34
3.3 Wildcard	39
3.4 About Expansion to Different Notations	40

3.1 AND Search, OR Search, and NOT Search

J-PlatPat allows you to perform OR search to find all results that meet any of multiple search criteria, AND search to find only results that meet all of multiple criteria, and NOT search to exclude specific search criteria.

For details, please refer to the help for each screen.

Regarding AND and OR searches, simple search differ from the basic principles.

Please refer to ["2.1 Searching Industrial Property Rights Information \[Simple Search\]" \(P.26\)](#) for an explanation of simple search.

Regarding AND search, the Patent/Utility Model Classification Inquiry (PMGS) differ from the Basic Principles.

Please refer to ["Searching Classifications \(FI, F-term, IPC\) by Keyword" \(P.112\)](#) for an example of AND search operation of the Patent/Utility Model Classification Search (PMGS).

AND Search

This method searches only for entries that fulfill all of multiple search criteria.

If you perform an AND search for "あい" and "うえ", "あいうえ," and "あいうえお" are displayed as search results because they fulfill both of the criteria, but " あ い お " and " う え お " are not because they include only one of the criteria.

By performing an AND search, you can narrow down the search results.

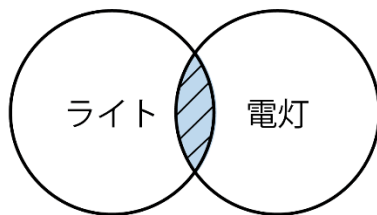

On J-PlatPat, an AND search is performed by using the search items before and after the ANDs displayed on the screen.

The screenshot shows the J-PlatPat search interface. At the top, there is a 'Search keywords' field. Below it, the 'Search item' is set to 'Abstract'. The 'Keyword' field contains 'ライト' (Light). To the right of the keyword field is a 'Proximity Search' button. Below the keyword field, there is a red dashed box containing the text 'AND'. To the left of this box is a 'Delete' button. Below the 'AND' box, the 'Keyword' field contains '電灯' (Light bulb). To the right of this field is another 'Proximity Search' button. Red arrows point from the 'AND' box to the 'ライト' and '電灯' keyword fields.

Search for "ライト" and "電灯" by performing an AND search

The overlapping portion is displayed as the search results

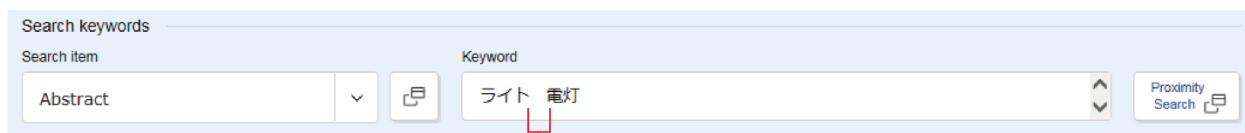

OR Search

This method searches for all entries that fulfill one of multiple search criteria.

If you perform an OR search for "あい" or "うえ", "あいうえお", "あいお", "うえお" and all other entries including either of the criteria are displayed as search results.

By performing an OR search, you can search for entries that refer to the same subject with different terms.

On J-PlatPat, you can perform an OR search by inserting a space between keywords.

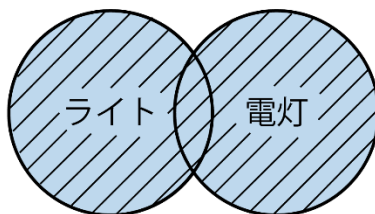

The screenshot shows the J-PlatPat search interface. At the top, there is a 'Search keywords' field. Below it, the 'Search item' is set to 'Abstract'. The 'Keyword' field contains 'ライト 電灯' (Raito Denkou), with a red bracket indicating the space between the two terms. To the right of the keyword field is a 'Proximity Search' button.

Search for "ライト" and "電灯" with a space in-between to perform an OR search

Items that meet at least one of the search conditions are all displayed as search results

NOT Search

This method searches for entries that exclude specific search criteria.

If you perform a search for "あい" but set "うえ" as an exclusion keyword for a NOT search, entries such as "あいお" and "あいう" are displayed as search results, but "あいうえお" is not displayed because it contains "うえ".

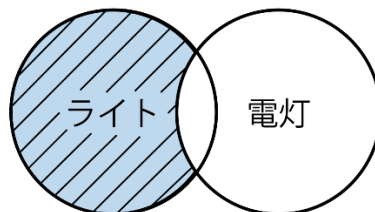

By performing a NOT search, you can narrow down the search results.

On J-PlatPat, you can perform a NOT search by entering words you wish to exclude from the search into the Exclusion Keywords field.

Search for "ライト" while excluding "電灯"

The search results for "ライト" are displayed while excluding results for "電灯"

3.2 Exact Match and Partial Match

This section explains the phrases "exact match" and "partial match", which make up one type of search criteria.

The search criteria for exact matches and partial matches differ depending on the item being searched for on each screen. Please see the tips below for main search items. For details, refer to Help on each screen.

Exact Match

As the search result, this method of searching only displays the terms that exactly match the character string entered in the search criteria.

Partial Match

As the search result, this method of searching displays the terms that partially match the character string entered in the search criteria.

To perform a partial match search on a search item that employs an exact match search, add a question mark "?".

■ Begins-with search

When searching for a term that begins with certain characters, enter a "?" following those characters.

For example, if you want to display "ディスプレイ", "ディスプレイー", and "ディスプレイ用金具" as search results, add a "?" after the shared section of the search term, "ディスプレ", before you search. Since the characters the search term begins with are searched for, it is called a begins-with search.

ディスプレ?

■ Ends-with search

When searching for a term that ends with certain characters, enter a "?" before those characters.

For example, if you want to display "液晶ディスプレイ" and "LED ディ스플레이" as search results, add a "?" before the shared section of the search term, "ディスプレイ", before you search. Since the characters the search term ends with are searched for, it is called an ends-with search.

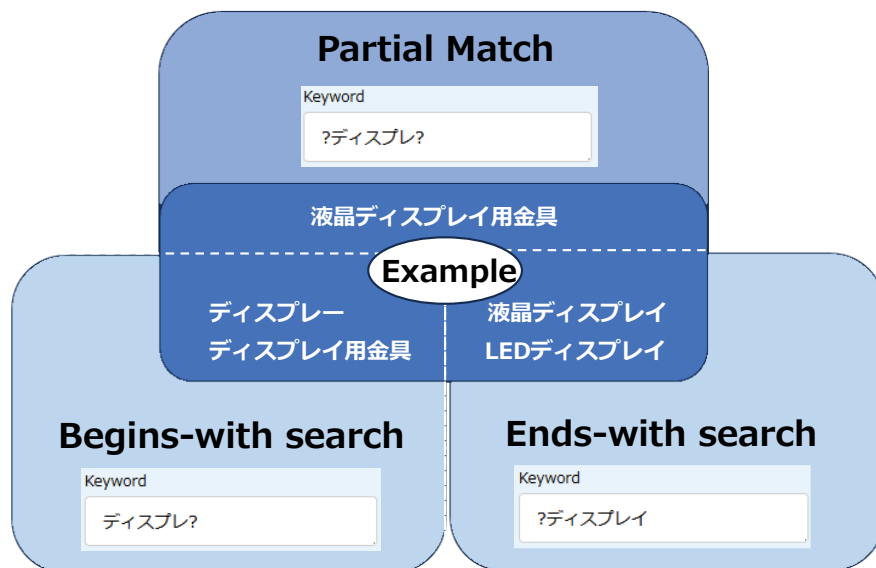

?ディスプレイ

■ Partial match search

To search for a term that contains the search term, add a "?" before and after the term.

For example, if you want to display "液晶ディスプレイ", "LED ディ스플레이", "ディスプレイ", and "ディスプレイ用金具" as search results, add a "?" before and after the shared section of the search term, " ディスプレ ", before you search. Since entries that match part of the search term are searched for, it is called a partial match search.

?ディスプレイ?

Tip

Major search items for the Patent/Utility Model Search

In the Patent/Utility Model Search, either an exact match search or a partial match search will be performed depending on the search items.

The most common search items are as follows:

Search item	Search Criteria for each Keyword, etc.	
	Exact Match Search	Partial Match Search
Full text	-	Yes
Bibliography	-	Yes
Title/name of invention or device	-	Yes
Abstract	-	Yes
Free word by examiner	Yes	-
Organization of applicant/right holder/author	-	Yes

For search items and details other than those mentioned above, please refer to the search tips on the Patent/Utility Model Search screen.

Tip

Major search items for the Design Search

In the Design Search, either an exact match search or a partial match search will be performed depending on the search items.

The most common search items are as follows:

Search item	Search Criteria for each Keyword, etc.	
	Exact Match Search	Partial Match Search
Relevant articles	-	Yes
Description of article to the design	-	Yes
Description of the design	-	Yes
Japanese design classification/D-term	Yes	When the wild card "?" is used, it will be prefix match
Applicant/Right holder	-	Yes

For search items and details other than those mentioned above, please refer to the search tips on the Design Search screen.

 Tip**Major search items for the Trademark Search**

In the Trademark Search, either an exact match search or a partial match search will be performed depending on the search items.

The most common search items are as follows:

Search item	Search Criteria for each Keyword, etc.	
	Exact Match Search	Partial Match Search
Trademark (for search)	Yes	The wild card "?" is available
Pronunciation (simple text search)	Yes	The wild card "?" is available
Applicant/right holder/Holder	Yes	Yes

For search items and details other than those mentioned above, please refer to the search tips on the Trademark Search screen.

3.3 Wildcard

A wildcard allows you to search for a keyword that contains one or more undetermined characters. Specify the undetermined character or characters for your search by using a question mark (?). For details on the search items in which you can use wildcards, refer to Help of each screen. In the Patents/Utility Models Search, keywords must be enclosed in single quotes " ' ". Enter question marks (?) and single quotation marks (') in half-width characters.

- Example of inputting a keyword that includes one undetermined character in between "無電源" and "発光"

```
'無電源?発光'
```

- Example of inputting a keyword that includes three undetermined characters in between "無電源" and "発光"

```
'無電源???発光'
```

Additionally, when searching for Patents/Utility Models, if the search target is English, you can also use an asterisk " * " to indicate any number of characters (0 or more).

This wildcard can only be specified after character strings of three or more characters.

- Example of inputting a keyword that includes zero or more undetermined characters after "memory"

```
'memory*'
```

3.4 About Expansion to Different Notations

In publications, items having the same meaning may sometimes be indicated by different notations. Searches are carried out by expanding entered keywords into different notations (different notation expansion).

Notations to which the search is automatically expanded are as follows.

- Long vowel symbol for Japanese (—), minus sign (－), hyphen (-), em-dash (—)
For example, when you enter "1 - 2", "1 － 2", "1 – 2", "1 - 2", and "1 — 2" are searched for.
- Contracted sounds and the geminate consonant in hiragana and katakana ("ア" and "ア", "ツ" and "ツ", "よ" and "よ", and so on)
For example, when you enter "シエア", "シ**エ**ア", "シ**エ**ア", "シ**エ**ア", and "シ**エ**ア" are searched for.
- Full-width and half-width characters
For example, when you enter "book" in half-width characters, "**b o o k**" in full-width characters, and "book" in half-width characters are searched for, but also "**b**ook", "b**o**ok", "bo**o**k", "boo**k**", "**b**ook", "**b**ook", "**b**ook", "b**o**ok", "bo**o**k", "bo**o**k", "**b**ook", "**b**ook", "**b**ook", "bo**o**k" are searched for.
- Latin alphabet upper and lowercase
For example, when you enter "ABC" in uppercase, in addition to "ABC", "aBC", "AbC", "ABc", "Abc", "aBc", "abC", "abc" are also searched for.

Searches are not automatically expanded into different notations other than those listed above. For other variants, enter a space between keywords as shown below to perform an OR search.

プレイヤー プレーヤー

バイオリン ヴァイオリン

センチメートル cm

However, in English searches are automatically expanded to different conjugated forms of the entered word.

For example, when you enter the verb "see", the past tense "saw", the past participle "seen", the present participle "seeing", and the third-person singular "sees" are searched for as well.

Common Operations

4

This chapter explains operations common for the four law categories.

See Help for a description of each item in the screen. For how to display Help, see ["Viewing Help" \(P.45\)](#).

4.1 Viewing the Manual/Help	42
4.2 Searching History Information.....	46
4.3 Copying Document URLs.....	48
4.4 Watching the History Information [RSS function]	50
4.5 CSV Output of Search Result List.....	54
4.6 Downloading PDFs of Documents	57
4.7 Batch Downloading PDFs of Multiple Documents.....	63
4.8 Viewing a Range of Information [Document Coverage Information].....	66
4.9 Saving Search Criteria and Repeating Search Using Same Search Criteria...	69

4.1 Viewing the Manual/Help

This manual is available as a booklet and in PDF and HTML formats. A description of each item in the screen can be found in "Help" (HTML).

Viewing and Downloading the PDF Version of This Manual

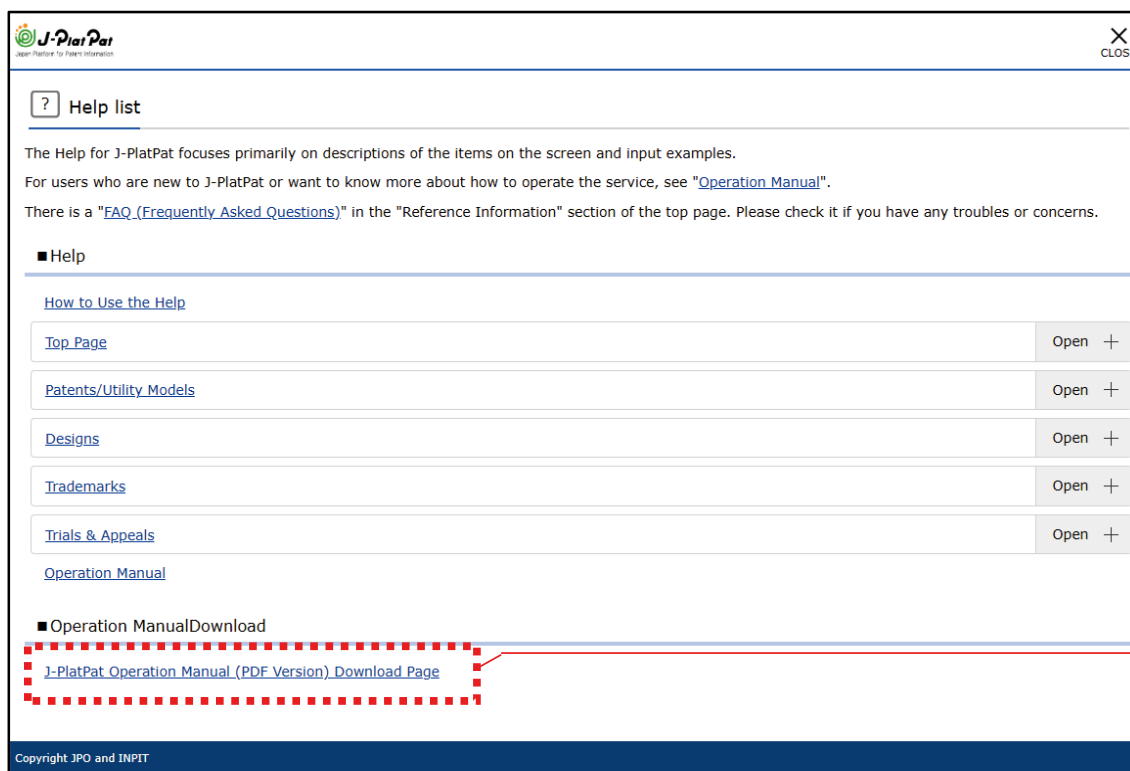

This section explains how to view and download the PDF version of this manual.

1. Click "Help list" at the top of the top page.

⇒ The "Help list" appears.

2. Select "J-PlatPat Operation Manual (PDF Version) Download Page".

⇒ The download page appears.

3. Select the PDF you wish to download.

About Japan Platform for Patent Information (J-PlatPat)

Service contents

Japan Platform for Patent Information (J-PlatPat) is a service that can be used by beginners and advanced users. Please see the following site about service contents, operation method etc.

- How to Use J-PlatPat
- Site Map
- How to Use Services
- Document Coverage Information Menu

Operating Environment

Japan Platform for Patent Information (J-PlatPat) is available in the following environments:

- Using on personal computer

OS	Windows8.1 or later, macOS El Capitan or later
Browser	Microsoft Edge17 or later, InternetExplorer11, Mozilla Firefox (the latest version), Google Chrome (the latest version), Safari12.0.1 or later (However, if the OS is El Capitan, 11.1.2.)
Display	Recommended resolution 1024 × 768 or more
Communication environment	Optical fiber equivalent Line speed or later
- Using on Tablet or Smartphone

OS	iOS12.1 or later, Android9 or later
Browser	iOS Safari11.1.2 or later, Android google chrome(the latest version)
Display	Tablet: Recommended resolution 768 × 1024 or more, Smartphone: Recommended resolution 360 × 640 or more
Communication environment	4G (LTE) or later

Operation Manual

Operation Manual (2021.02) [PDF : 18.1MB]

Support

If you have trouble operating Japan Platform for Patent Information (J-PlatPat), please refer to the help page and FAQ below.

- Help list
- FAQ (Frequently Asked Questions and Answers)

Copyright © 2004-2020 INIT All Rights Reserved.

⇒ The PDF appears.

When downloading the PDF, use your PDF viewer (such as Adobe® Acrobat® Reader) to save the PDF in the location you desire. See the manual of your PDF viewer for how to save PDFs.

Viewing the HTML Version of This Manual

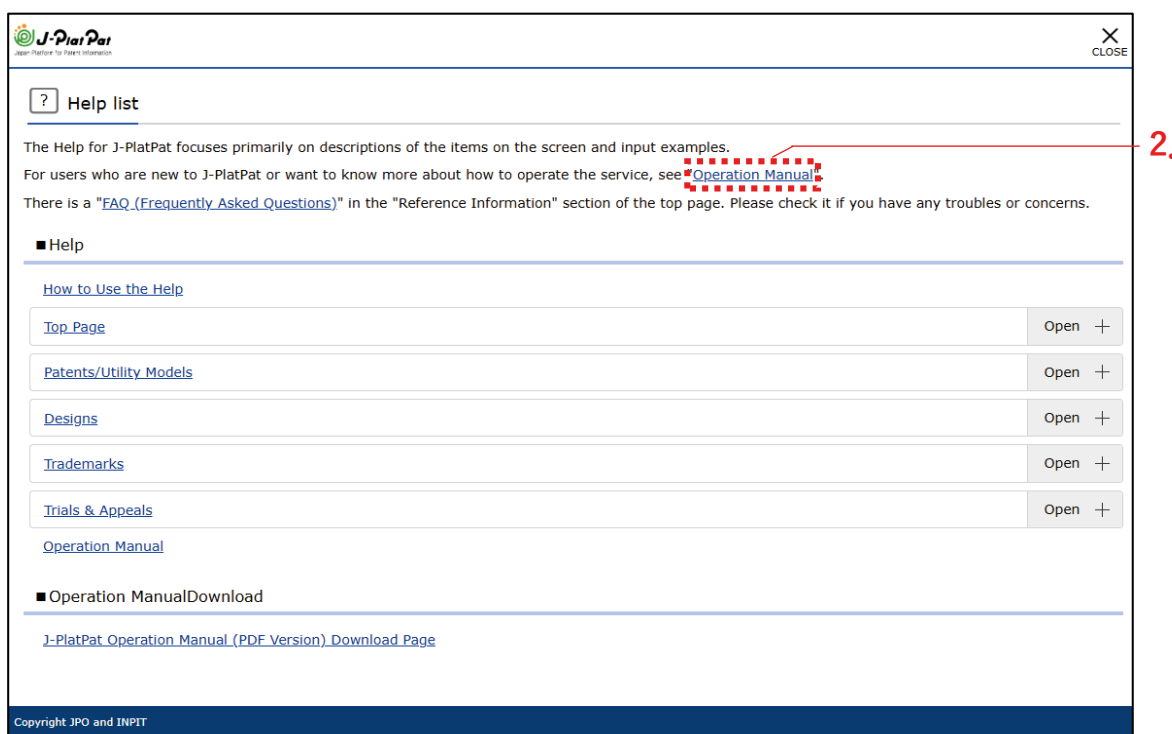

The following explains how to view the HTML version of this manual.

1. Click "Help list" at the top of the top page.

⇒ The "Help list" appears.

2. Select the "Operation Manual" link.

⇒ The HTML version of this manual appears.

Viewing Help

This section explains how to view Help.

1. Click "Help list" at the top of the top page.

⇒ The "Help list" appears.

2. Select a help topic to view.

▶ Tip

How to easily display Help in the current screen

To open Help directly from the current J-PlatPat screen, click the "Help" icon  next to the title of the screen.

4.2 Searching History Information

History information such as the state of examinations, rights, and other application information can be viewed from the search results in each category of law. The gazette information has not changed since it was published, so checking history information allows you to confirm the examination process about the reasons for refusal or the amendment, and so on. This section explains how to view history information.

The history information is not a substitute for publications.

Operation Example

Search for examination records or registration information for patent application number "2011-176674".

1. Search for the document in question.

For how to search, see the following:

- "Chapter 5 Patents and Utility Models" (P.77)
- "Chapter 6 Designs" (P.127)
- "Chapter 7 Trademarks" (P.141)
- "Chapter 8 Trial & appeals" (P.171)

In this example, search for patent application number "2011-176674" in the "Patent/Utility Model Number Search/OPD".

⇒ The Search Result List screen appears.

Search Result List

Domestic Documents (1) Foreign Documents (-) Non-patent document (-)

You can check the relationship between the entered number and the search results. ([Matching list](#))

Search list options Close

Display format of list page : ☒ Number only ☐ Simple bibliography

Display format of document display page : ☒ Text ☐ PDF [Download Multiple PDFs](#) [Print List](#) [CSV Output](#)

You can select 20 documents at most for the multiple PDF download.

No.	Application number ▲	Publication number ▲	Publication number of examined application ▲	Registration number ▲	Appeal or trial number	Other	Status ▲	Options
1 ☐	JP,2011-176674	JP,2012-081735.A	-	JP,5165783.B	-	-	Grant Full renewal or maintenance fee paid.	Details OPD URL

2. Click the "Details" button in the Search Result List screen.

⇒ The Inquiry of history information screen appears.

For examination records, clicking the link for each document brings up the content of that document.

If the file size of the document is very large, a compressed file is downloaded.

The screenshot displays the 'Inquiry of history information' interface. The top section shows patent details for 'PatentsApplication 2011-176674' and 'Publication2012-081735'. Below this, there are tabs for 'History Records', 'Application Information', and 'Registration Information'. The 'History Records' tab is active, showing a list of documents under the 'Examination Records' section. A red arrow points to the 'Notice of Reasons for Refusal' link in the list. To the right, a detailed view of this document is shown, including application number, date of drafting, examiner, and the specific reason for refusal.

Examination Records

Notice of Reasons for Refusal (PatentsApplication2011-176674)

*** NOTICES ***
 JPO and INPIT are not responsible for any damages caused by the use of this translation.
 1.This document has been translated by computer. So the translation may not reflect the original precisely.
 2.**** shows the word which can not be translated.

Notice of Reasons for Refusal

Application number: Japanese Patent Application No. 2011-176674
 Date of Drafting: Heisei 24(2012) October 31
 Patent examiner: MIYAMOTO, Akihiko 9226 2B00
 Representative/Applicant: MATSUMOTO, Takashi (and 1 others)
 Applied Provisions: Article 29(2), Article 36

This application should be refused for the reason mentioned below. If the applicant has any opinion(s) against the reason, a written opinion should be submitted within 60 days from the date on which this notification was dispatched. Reason

<Reason 1>
 The application does not comply with the requirement stipulated in Article 36 (6) (1) of the Patent Act in the following points : (2).

Note that history information can also be searched by clicking the "Details" button in the Document Display screen that appears after clicking the document number link in the Search Result List screen.

4.3 Copying Document URLs

This section explains how to copy a document URL to the clipboard.

URLs copied to the clipboard can be pasted in emails, set as browser bookmarks, and the like. The following services permit the copying of document URLs.

- Patent/Utility Model Number Search/OPD
- Patent/Utility Model Search
- Design Number Search
- Design Search
- Trademark Number Search
- Trademark Search

Aside from trial decisions, fixed addresses (URLs) copied from the previous J-PlatPat can be used as-is with the current J-PlatPat.

Operation Example

Copy the URL of the document with patent application number "2004-106468".

1. Search for the document in question.

For how to search, see the following:

- ["Chapter 5 Patents and Utility Models" \(P.77\)](#)
- ["Chapter 6 Designs" \(P.127\)](#)
- ["Chapter 7 Trademarks" \(P.141\)](#)
- ["Chapter 8 Trial & appeals" \(P.171\)](#)

In this example, search for patent application number "2004-106468" in the "Patent/Utility Model Number Search/OPD".

⇒ The Search Result List screen appears.

Search Result List

Domestic Documents (1) Foreign Documents (-) Non-patent document (-)

You can check the relationship between the entered number and the search results. ([Matching list](#))

Search list options Close

Display format of list page : ☒ Number only ☐ Simple bibliography

Display format of document display page : ☒ Text ☐ PDF Download Multiple PDFs Print List CSV Output

You can select 20 documents at most for the multiple PDF download.

No.	Application number ▲	Publication number ▲	Publication number of examined application ▲	Registration number ▲	Appeal or trial number	Other	Status ▲	Options
1	JP,2004-106468	JP,2005-287741,A	-	JP,4182222,B	-	-	IP right ceased IP right expired.	Details PDF URL

2. Click the "URL" button in the Search Result List screen.

⇒ The URL is copied to the clipboard and the URL Copy screen appears.

URL Copy

The URL information for JP,2004-106468 has been copied.

<https://www.j-platpat.inpit.go.jp/c1801/PU/JP-2004-106468/10/en>

Close

The URL displayed in the URL Copy screen is the URL that was copied to the clipboard.

3. Click the "Close" button.

⇒ The URL Copy screen closes.

The URL has been copied to the clipboard and can thus be pasted as desired.

4.4 Watching the History Information [RSS function]

You can receive a notification of an item when it is updated. We explain its operations below.

As you register, your data collection time can be shortened. Also, you cannot happen to overlook the information such as documents sent from the JPO or the applicant. So that, you can prevent missed confirmation.

The RSS function can be used with the following services.

- Patent/Utility Model Number Search/OPD
- Patent/Utility Model Search
- Design Number Search
- Design Search
- Trademark Number Search
- Trademark Search

Operation Example

Register RSS of the publication of Trademark application number "2006-094273"

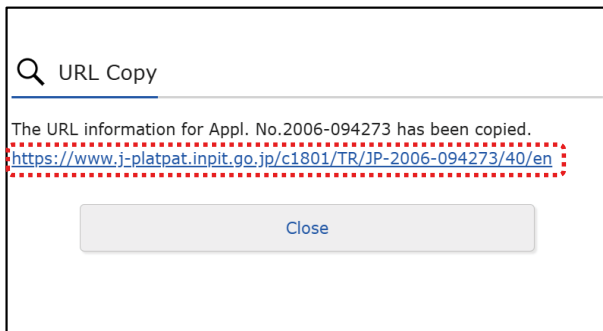

- 1.** Search for the document in question, and then copy document URL.

Please see below for instructions on how to copy the URL of a document.

- ["4.3 Copying Document URLs" \(P.48\)](#)

In this example, search for trademark application number "2006-094273" in the "Trademark Number Search", and then copy the document URL.

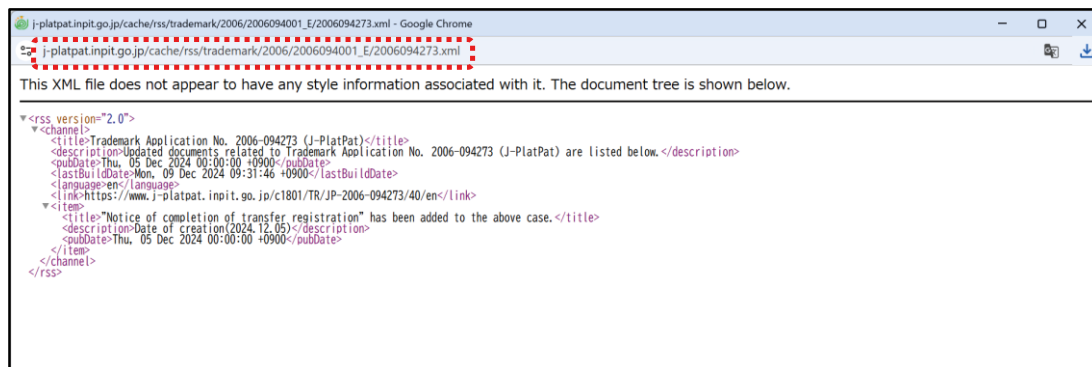

2. Click the URL displayed.

3. Click the "RSS" mark next to the title of the "Trademark Inquiry (Fixed Address)".

No.	Application number/ Registration number/ International registration number	Specimen of trademark	Trademark (for search)	Pronunciation criteria	Pronunciation (reference information)	Class	Applicant/ Right holder/ Holder	Filing date/ Date of the international registration (date of subsequent designation)	Registration date	Status
1	Reg.No.5052317 (Appl.No.2006-094273)		INPIT	-	インビット	09 16 41 ...	独立行政法人工業所有権情報・研修館	Sep.27,2006	Jun.08,2007	LIVE-REGISTRATION-Issued and Active

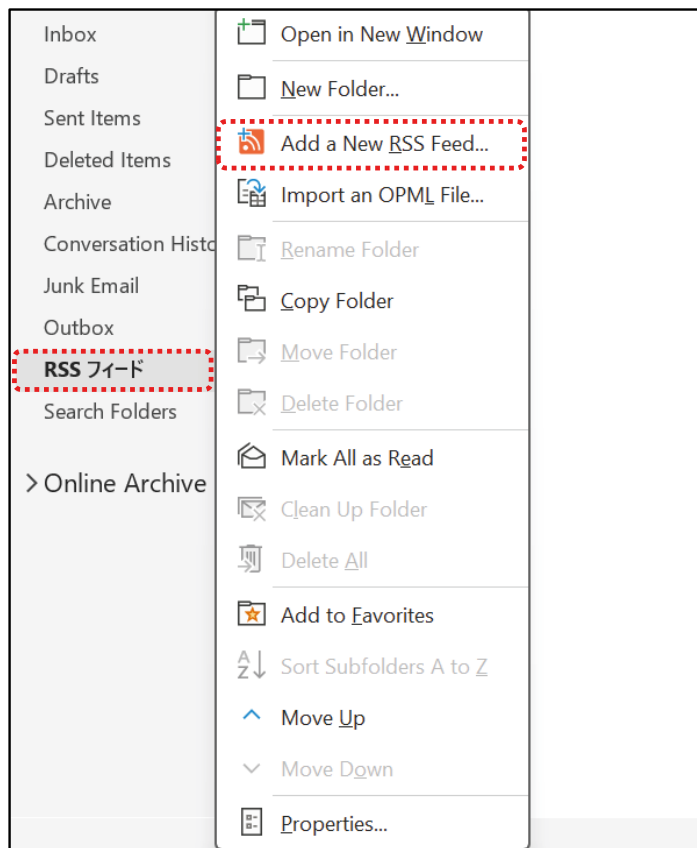

4. Copy the next page URL "jplatpat...(omitted)....xml".

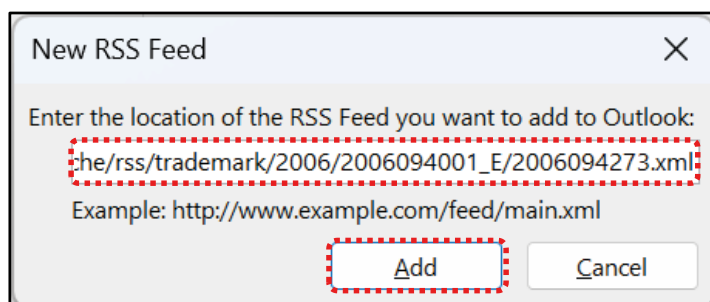

5. Register the URL copied to the RSS reader.

The following describes an example of registering to the RSS reader (RSS feed of Outlook).

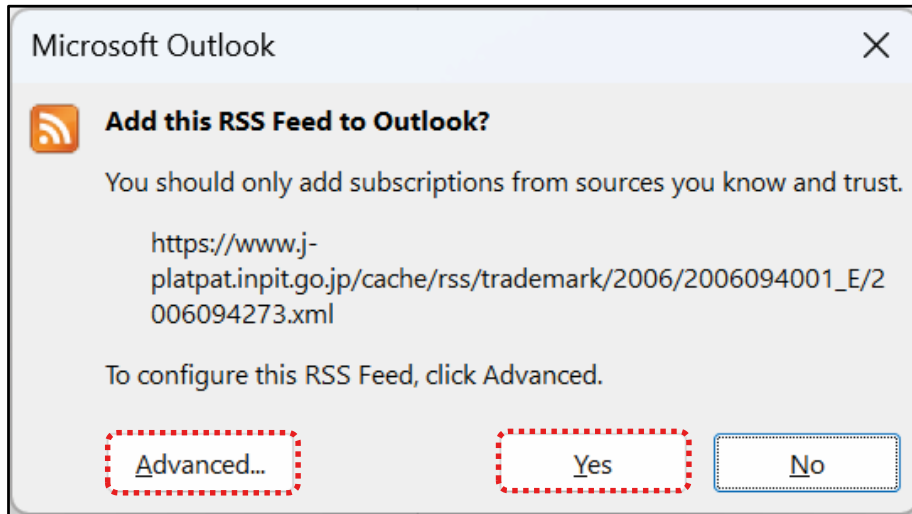

- (1) Click the "Add a new RSS Feed" on the menu by right-clicking on the RSS feed of Outlook.

- (2) Paste the URL copied in the text box of the new RSS feed, and then click the "Add" button.

- (3) Click the "Yes" button after setting "Advanced Settings" if necessary.
Registration is done.

► **Tip**

About documents for which notifications can be received by RSS function.

You can only receive the notification of documents that are displayed in the "History Information". The documents that are not displayed in the "History Information" are unavailable to receive the notification.

4.5 CSV Output of Search Result List

This section explains how to output a search result list as a file in CSV format.

The CSV format can be used by software that supports CSV files, such as Microsoft® Excel®.

- Advance application is required for outputting files in CSV format. This section will also explain registration for authentication.
- The following cases can be output to 500.
 - When including an abstract in a patent/utility model search
 - Trial decision search
- You cannot select the CSV output items on your desire.

Operation Example

Output the similar readings to "プラットフォーム" displayed in the Search Result List screen (trademarks) in CSV format.

1. Search for the document in question.

For how to search, see the following:

- ["Chapter 5 Patents and Utility Models" \(P.77\)](#)
- ["Chapter 6 Designs" \(P.127\)](#)
- ["Chapter 7 Trademarks" \(P.141\)](#)
- ["Chapter 8 Trial & appeals" \(P.171\)](#)

In this example, search for "プラットフォーム" in the Trademark Search.

⇒ The Search Result List screen appears.

2. Click the "CSV Output" button in the Search Result List screen.

⇒ The Authentication for CSV Output screen appears.

Authentication for CSV Output [Click Here for the Use Application](#)

Input your User ID and password.

User ID
xxxxxxxx

Password
.....

[Change Password](#) [Click Here If You Forgot Your ID/Password](#)

[Login](#) [Close](#)

3. Enter your "user ID" and "password".

If this is your first time using the CSV output service, apply by selecting "Click Here for the Use Application" in the upper-right part of the Authentication for CSV Output screen. An email containing your user ID will be sent to the registered mail address.

◆ Attention ◆

If ten minutes have passed after applying for CSV output use and you still have not received your user ID, check the following:

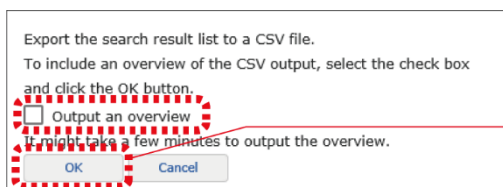

- Whether the correct mail address was used in the application.
Confirm your mail address and try applying again.
- Whether the email was incorrectly marked as spam.
Check your spam folder. To prevent the email from being sent to the spam folder, mark "@j-platpat.inpit.go.jp" as safe in your email settings.

If you have forgotten your password, reset your password by selecting "Click Here If You Forgot Your ID/Password".

4. Click the "Login" button.

⇒ A confirmation message will be displayed in the patent/utility model search.

If the search results of the patent/utility model search are 500 or less, you can include an abstract in the CSV output items.

5.

5. Click the "OK" button.

⇒ In the event of a successful login, the "CSV download" button appears in the lower-right part of the screen.

6.

6. Click the "CSV download" button.

⇒ The CSV output process starts. Follow the prompts in your browser to save the file.

4.6 Downloading PDFs of Documents

This section explains how to download the PDF of a document. A downloaded PDF can be printed or saved.

Operation Example

Download a PDF of design registration number "1568234".

1. Search for the document in question.

For how to search, see the following:

- "Chapter 5 Patents and Utility Models" (P.77)
- "Chapter 6 Designs" (P.127)
- "Chapter 7 Trademarks" (P.141)
- "Chapter 8 Trial & appeals" (P.171)

In this example, search for design registration number "1568234" in the "Design Number Search".

⇒ The Search Result List screen appears.

2. Select the link for the number (in this case, the registration number) of the document to display in the Search Result List screen.

⇒ The publication appears.

No.	Registration number ▲	Application number ▲	International registration number+ Design number ▲	Appeal or trial number	Other	Options

4. Save the PDF.

See the manual of your PDF viewer for how to save PDFs.

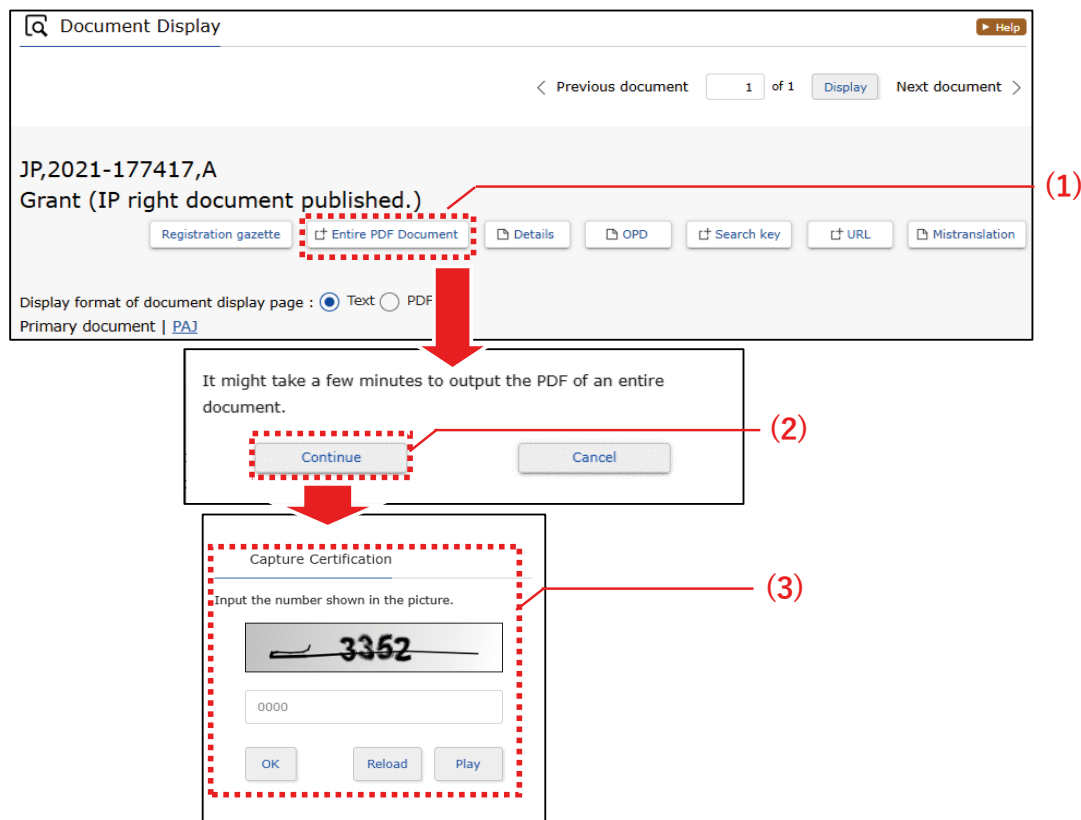

Tip

Downloading entire patent and utility model documents as PDFs

For patents and utility models, clicking the "Entire PDF Document" button in the Document Display screen allows PDF files of domestic documents, foreign documents, or non-patent documents to be downloaded.

- (1) Click the "Entire PDF Document" button in the Document Display screen. A warning pertaining to outputting the entire PDF document appears.

- (2) Check the message and click the "Continue" button to open a CAPTCHA authentication screen.
- (3) Input the 4-digit authentication number that is displayed in the image into the input field in half-width characters and click the "OK" button.
If authentication is successful, the "PDF download" button appears in the lower-right part of the Document Display screen.

If there are multiple PDFs or the document is divided into multiple parts, the Entire PDF Document screen appears, and the documents to be downloaded can be selected from the list of files.

- (4) Click the "PDF download" button.

The PDF appears. See the manual of your PDF viewer for how to save PDFs.

The downloaded PDF may be divided into several files if the PDF is very large.

For details about combining files, refer to the "[When the downloaded PDF is divided into multiple files](#)" (P.61).

Tip

When the downloaded PDF is divided into multiple files

The downloaded PDF may be divided into several files if the PDF is very large.

This section describes how to combine divided downloaded files. Note that combining files cannot be performed on mobile devices such as smartphones. To combine files, use a computer.

- (1) Check the extension of the downloaded file.

Correct extensions:

```
xxxx-merge.zip (combining program) xxxx.zip.0001 xxxx.zip.0002
xxxx.zip.0003
```

File extensions are sometimes changed by the browser used to download the file. Confirm that the files aside from the combining program have the extension format "xxxx.zip.nnnn".

If the file extension has changed to "xxxx.zip.0001.zip", "xxxx.zip.zip", "xxxx.zip.", or the like, return the file name to the format indicated above in "correct extensions" (that is, "xxxx.zip.nnnn").

- (2) Double-click the downloaded combining program (xxxx-merge.zip).

The file is decompressed and the combining batch file "xxxx.bat" is created. You may need archiving software to decompress the compressed file. See the manual of your archiving software for how to decompress files.

Make sure all the downloaded "xxxx.zip.nnnn" files are stored in the same folder as the combining batch file "xxxx.bat".

- (3) Double-click the combining batch file "xxxx.bat". This creates a compressed file "zzzz.zip".

- (4) Double-click the compressed file "zzzz.zip".

The file is decompressed and the combined PDF "zzzz.pdf" is created.

4.7 Batch Downloading PDFs of Multiple Documents

This section explains how to download the PDFs of multiple documents in a batch. However, this function can only be used for the following document types.

Patents/utility models	Domestic documents
Designs	Domestic gazette
Trademarks	Publication
Trials and appeals	Publication

Operation Example

Download the PDFs of multiple documents pertaining to technical information published as of October 2005 for "風鈴".

1. Search for the document in question.

For how to search, see the following:

- "Chapter 5 Patents and Utility Models" (P.77)
- "Chapter 6 Designs" (P.127)
- "Chapter 7 Trademarks" (P.141)
- "Chapter 8 Trial & appeals" (P.171)

In "Patent/Utility Model Search", find out what kind of technical information has been published as of October 2005 for "風鈴".

⇒ The Search Result List screen appears.

Search Result List

Domestic Documents (6) Foreign Documents (-) Non-patent document (-)

Search list options

By publication years : All | 2005(6)

By FI : All | A63(2) | A44(1) | A47(1) | B44(1) | B65(1) | C11(1) | H04(1)

Display option of list page ? : ☒ Prioritized and earliest published applications ☐ Prioritized publication/registration

Display format of document display page : ☒ Text ☐ PDF

Various Ranking Download Multiple PDFs Print List CSV Output

You can select 20 documents at most for the multiple PDF download.

No.	Document number ▲	Application number ▲	Filing date ▲	Publication date ▲	Title of the invention ▲	Applicant/Right holder	Status ▲	FI	Options
1			Apr.15,2005	Oct.27,2005	結露活用五感刺激心地よいコッ プ		-	A47G19/22@B	Details OPD URL

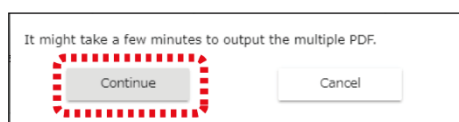

2. In "No.", select the number of a document whose PDF is to be downloaded.

Documents can no longer be selected if the number of selectable documents is exceeded.

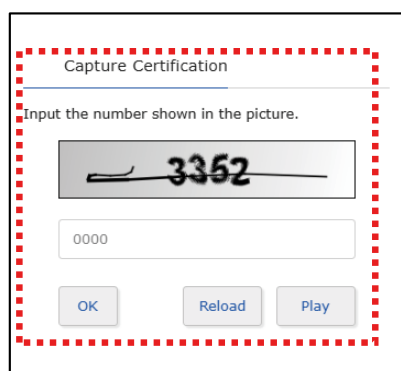

3. Click the "Download Multiple PDFs" button.

⇒ A warning pertaining to outputting multiple PDF files appears.

4. Check the message and click the "Continue" button.

⇒ A CAPTCHA authentication screen appears.

5. Input the 4-digit authentication number that is displayed in the image into the input field in half-width characters and click the "OK" button.

⇒ If authentication is successful, a compressed file including multiple PDFs (PDFDL_ZZ_yyyyMMddhhmmss.zip) is downloaded.

ZZ indicates the law category code, and yyyyMMddhhmmss indicates the file creation date.

The law category code represents one of the following.

PU : Patents/utility models

D : Designs

T : Trademarks

J : Trials and appeals

6. Save the compressed file (PDFDL_ZZ_yyyyMMddhhmmss.zip) and then decompress the file.

- The contents of the compressed file (PDFDL_ZZ_yyyyMMddhhmmss.zip) after decompression are as follows.

PDFDL_ZZ_yyyyMMddmmss.csv : Catalog file

Folder named by document number

└ XXXXXXXX.pdf

Folder named by document number

└ XXXXXXXX.pdf

⋮

The catalog file gives the document number, publication type, relative path of the PDF file, and error information for each document that was selected.

If a PDF file for the publication does not exist, "The specified publication does not exist." is displayed in the error information.

- The downloaded PDF may be divided into several files if the PDF is very large.
For details about combining files, refer to the ["When the downloaded PDF is divided into multiple files" \(P.61\)](#).

4.8 Viewing a Range of Information

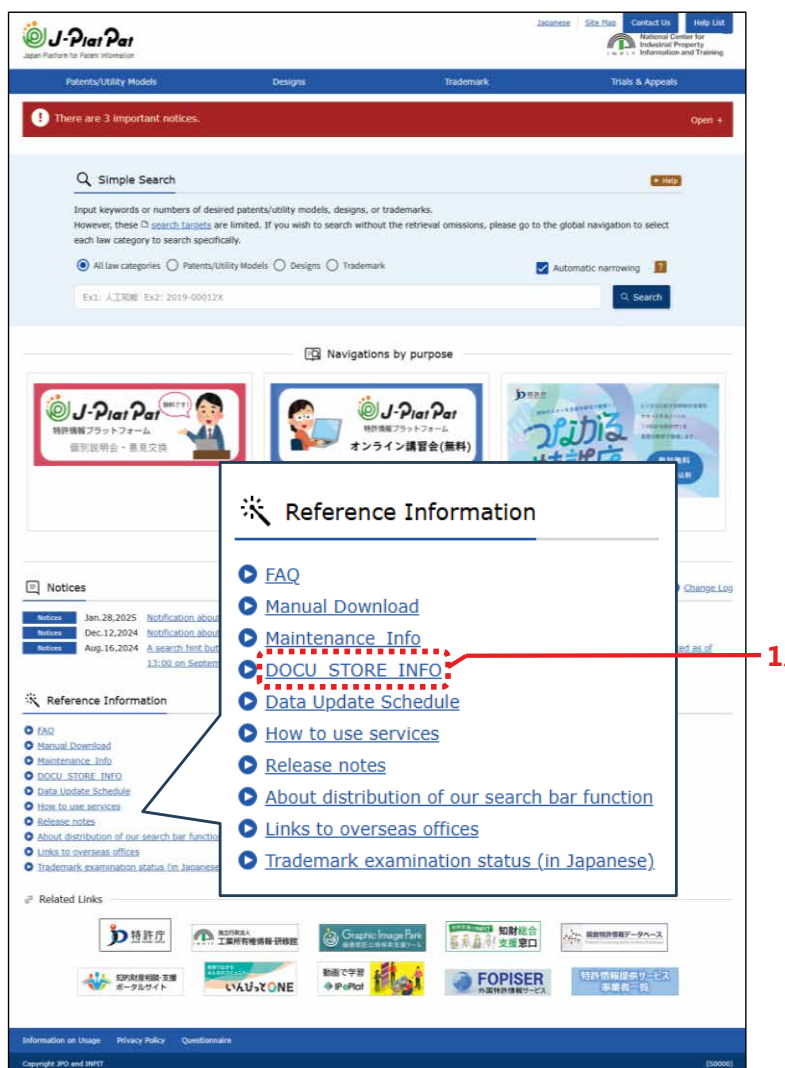

[Document Coverage Information]

The range of information provided by each service can be confirmed through document coverage information. This section explains how to view document coverage information.

Operation Example

Search a range of domestic documents, namely "Publication of unexamined patent application (A)", which can be searched in "Patents/Utility Models".

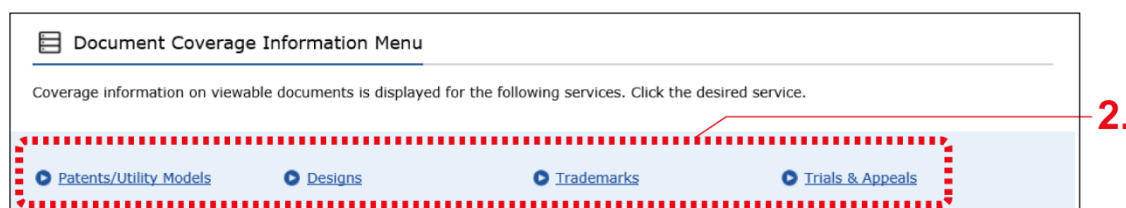

1. Select "Document Coverage Information" in the "Reference Information" section of the top page.

⇒ The Document Coverage Information Menu screen appears.

2. Select a service to view.

In this case, select "Patents/Utility Models".

⇒ A range of information provided by the service appears.

The document coverage information is updated as needed.

For example, if the coverage range of "A:Publication of unexamined patent application" is "1971-000001 to 2018-161056", the search range used when searching "Publication of unexamined patent application (A)" corresponds to documents from "1971-000001" to "2018-161056".

Document Coverage Information/Patent		
The coverage of available documents is as follows.		
National literature	2019/04/22	
Document Types	Coverage Range	
A:Publication of unexamined patent application	2014-118634	~ 2020-206237
A:Publication text of unexamined patent application (paper)	1971-001614	~ 1992-362924
A:Publication of PCT application(patent)	2015-511463	~ 2020-550001
A:Publication text of PCT application(patent) (paper)	1981-500530	~ 1995-509461
B:Publication of examined patent application		~
B:Publication text of examined patent application (paper)	1970-013375	~ 2015-139370
B:Publication of granted patent application	5629867	~ 6424381
C:Patent specification		~
H:Corrected patent specification		~
U:Publication of unexamined utility model application	1973-027312	~ 1990-042939
U:Publication text of unexamined utility model application (paper)	1972-017702	~ 1992-119330
U:Publication of PCT application(utility model)		~
U:Publication text of PCT application(utility model) (paper)	1980-500001	~ 1980-500009
U:Publication of registered utility model application	3141035	~ 3219765
U1:Unexamined utility model specification	1972-001920	~ 1991-029599

Tip**How to easily display document coverage information related to the current screen**

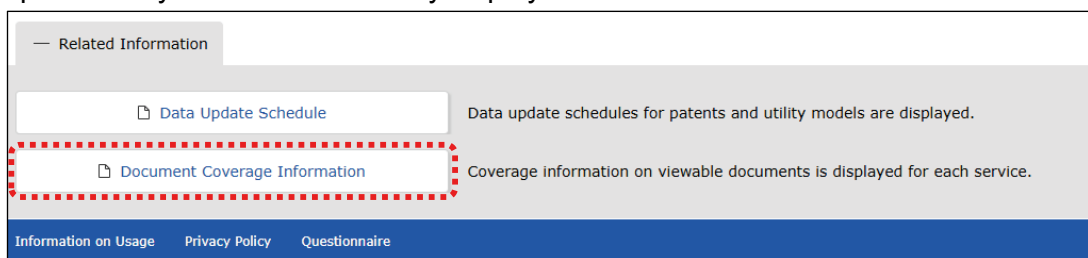

- (1) Click the "+Related Information" button at the bottom of each search screen.

The related information area appears.

- (2) Click the "Document Coverage Information" button.

The Document Coverage Information screen appears, and the range of information provided by the service currently displayed can be confirmed.

4.9 Saving Search Criteria and Repeating Search Using Same Search Criteria

When repeating a search using the same search criteria, saving search criteria can be used to avoid entering criteria. This section explains how to search using keywords. When executing the saved search criteria for the first time, search as follows. See ["Searching with a Saved Search Condition" \(P.72\)](#) if a search condition is already saved.

- (1) ["Saving a Search Condition" \(P.69\)](#)
- (2) ["Searching with a Saved Search Condition" \(P.72\)](#)
- (3) ["Outputting a Saved Search Condition to a CSV file" \(P.74\)](#)
- (4) ["Loading a CSV file" \(P.75\)](#)

Saving a Search Condition

This section explains how to save a search condition.

Search conditions are saved on a browser-by-browser basis. If the browser cache is cleared, saved search conditions will be cleared as well.

Operation Example

Save a search condition from the search criteria used in the Operation Example in ["5.2 Searching Patents and Utility Models by Keyword \[Patent/Utility Model Search\]" \(P.83\)](#).

1. Enter the target search condition.

Please refer to the following instructions for how to enter.

- ["5.2 Searching Patents and Utility Models by Keyword \[Patent/Utility Model Search\]" \(P.83\)](#)
- ["6.2 Searching Designs by Keyword \[Design Search\]" \(P.131\)](#)
- ["7.2 Searching Trademarks by Keyword \[Trademark Search\]" \(P.145\)](#)
- ["8.1 Searching Trial Decisions and Judgment Gazettes \[Trial Decision Search\]" \(P.172\)](#)

In this example, enter the condition below into The Patent/Utility Model Search.

- In "Search target text", select "Japanese text".
- In "Document types", select "Domestic Documents".
- In the "Search item" field of "Search keywords", select "Full text".
- In the "Keyword" field of "Search keywords", enter "風鈴".
- Open the search option area and select "Publication date/issued date" in "Date options".
- In "Date options", enter "20051001" to "20051031".

The screenshot shows the J-PlatPat search interface with the following configuration:

- Selective Input:** Logical Expression Input, Search History
- Search target text:** Japanese text (selected), English text
- Document types:** Domestic Documents (checked), Foreign Documents, Non-patent document, J-GLOBAL
- Search keywords:**
 - Search item: Full text
 - Keyword: 風鈴
 - AND: Abstract, FI, IPC
 - Ex: 組立物, C04B35/49, B01B1/00
- Exclusion keywords:** Specify a keyword to exclude from the search result.
- Search options:**
 - Main theme: Ex: 4K018
 - Sub theme: Ex: 2C999,4H004,4H104
 - Date options: Publication date/issued date, 20051001 ~ 20051031
 - Registered item search: Filter items by registration date
 - Search by status: Narrow down by items for "Application/Right not expired"
 - Search by stage: -

At the bottom, the "Save Search Condition" button is highlighted with a red dashed box and labeled '2.'.

2. Click the "Save Search Condition" button.

⇒ The search criteria is saved in the browser.

Five search criteria can be saved. A new search criteria will overwrite the saved search criteria. If search criteria is locked, it will not be overwritten.

Tip

To lock a Saved Search Condition

- (1) Click the "Load Search Condition" button.

The "Load Search Condition" screen appears.

Patent/Utility Model Search

You can retrieve patent/utility model publications, foreign documents, and non-patent documents by using keywords in bibliographies, abstracts, and claims, as well as classifications (FI/F-terms, IPC), etc.
 Enter a document type and a search keyword to search. (An OR search is performed when you separate search keywords with a space.)
 For more information about classification information, see [Patent/Utility Model Classification Search \(PUBG\)](#).
 Filter search is also available by using the previous search result. For the search history number, please check from the search history tab.
 To search by specifying the search history number, set the Document types setting for Domestic Documents or Foreign Documents to the same setting as the previous search.

Selective Input Logical Expression Input Search History

Load Search Condition Search Type

- (2) Click the key icon next to the Search condition that you want.

The search condition is locked. Click it again to unlock.

Load Search Condition

Key icon : When the icon is black (locked), the search condition will not be overwritten. Up to 5 search conditions can be saved. A new search condition will overwrite the oldest saved search condition among the search conditions whose Key icon is white (unlocked).

Searching with a Saved Search Condition

This section explains how to search using the saved search condition.

In this section, search using a saved search condition in the Patent/Utility Model Search.

Operation Example

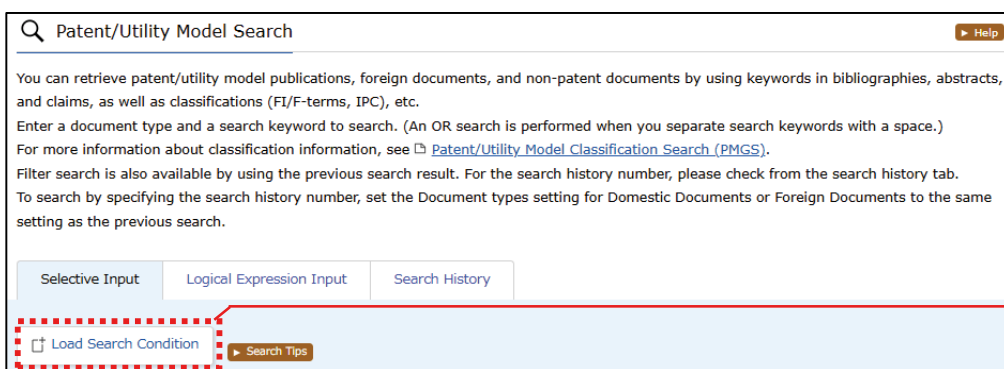

Load a search condition saved in "Saving a Search Condition" (P.69) to search the [Patent/Utility Model Search].

1. Load the search condition.

To load a saved search condition using the following procedure.

(1) Click the "Load search condition" button.

Load search condition screen appears.

Patent/Utility Model Search

You can retrieve patent/utility model publications, foreign documents, and non-patent documents by using keywords in bibliographies, abstracts, and claims, as well as classifications (FI/F-terms, IPC), etc.

Enter a document type and a search keyword to search. (An OR search is performed when you separate search keywords with a space.)

For more information about classification information, see [Patent/Utility Model Classification Search \(PMGS\)](#).

Filter search is also available by using the previous search result. For the search history number, please check from the search history tab.

To search by specifying the search history number, set the Document types setting for Domestic Documents or Foreign Documents to the same setting as the previous search.

Outputting a Saved Search Condition to a CSV file

This section explains how to output a saved search condition to a CSV file

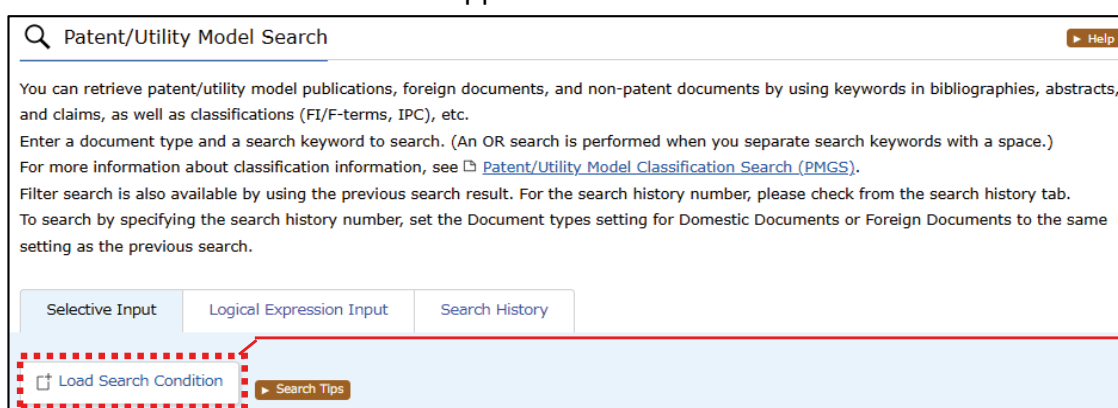

In this section, search using a saved search condition in the Patent/Utility Model Search.

Operation Example

Output a saved search condition of [Patent/Utility Model Search] saved in "Saving a Search Condition" (P.69) to a CSV file.

1. Click the "Load Search Condition" button.

⇒ Load Search Condition screen appears.

Q Patent/Utility Model Search ▶ Help

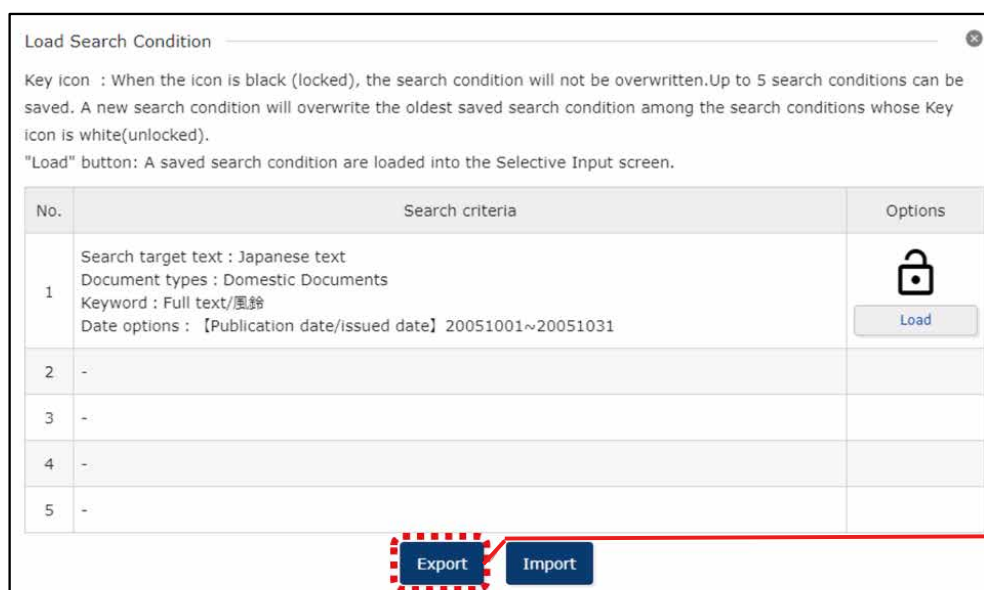

You can retrieve patent/utility model publications, foreign documents, and non-patent documents by using keywords in bibliographies, abstracts, and claims, as well as classifications (FI/F-terms, IPC), etc.

Loading a CSV file

This section explains how to load a CSV file.

In this example, load the CSV file outputted in the Patent/Utility Model Search.

Attention

A CSV file cannot be imported from different law categories. Only a CSV file exported on the search screen for each law category can be imported. When imported, all saved search conditions (including locked ones) will be overwritten. Do not edit the exported CSV file directly. It may load incorrectly.

Operation Example

Loading the CSV file downloaded in "Outputting a Saved Search Condition to a CSV file" (P.74) to the [Patent/Utility Model Search].

1. Click the "Load Search Condition" button.

⇒ The Load search condition screen appears.

Patent/Utility Model Search

You can retrieve patent/utility model publications, foreign documents, and non-patent documents by using keywords in bibliographies, abstracts, and claims, as well as classifications (FI/F-terms, IPC), etc.

Patents and Utility Models

5

This chapter explains how to search for patent and utility model information.

- The searching limit for Patents/Utility Models is up to 3,000. The error message will appear when the search results exceed the upper limit of 3,000. If so, please change the search criteria and then search again.
- If you know the document number you wish to search for, see ["5.1 Searching Patents and Utility Models by Document Number \[Patent/Utility Model Number Search/OPD\]" \(P.78\)](#).
- If you do not know the document number you wish to search for, or if you wish to search using keywords, see ["5.2 Searching Patents and Utility Models by Keyword \[Patent/Utility Model Search\]" \(P.83\)](#).
- For how to search for trial decisions, see ["8.1 Searching Trial Decisions and Judgment Gazettes \[Trial Decision Search\]" \(P.172\)](#).
- For how to view history information, see ["4.2 Searching History Information" \(P.46\)](#).
- See Help for a description of each item in the screen.

5.1	Searching Patents and Utility Models by Document Number [Patent/Utility Model Number Search/OPD]	78
5.2	Searching Patents and Utility Models by Keyword [Patent/Utility Model Search].....	83
5.3	Narrowing Down Patent Search Results Using Search Function to Narrow Down Legal Status [Patent/Utility Model Search].....	90
5.4	Saving Search Criteria (Logical Expression) and Repeating Patent and Utility Model Search Using Same Search Criteria [Patent/Utility Model Search]	96
5.5	Searching Patents and Utility Models by Using Search History Number[Patent/Utility Model Search].....	106
5.6	Searching Patent and Utility Model Classifications [Patent/Utility Model Classification Search (PMGS)]	112
5.7	Searching Patent Applications and Examination-Related Information From Countries Around the World [Patent/ Utility Model Number Search/OPD]	123

5.1 Searching Patents and Utility Models by Document Number [Patent/Utility Model Number Search/OPD]

This section explains how to search documents by number, such as application number or publication number.

Operation Example

Search for patent application number "2004-106468".

1. From the global navigation, select "Patents/Utility Models" - "Patent/Utility Model Number Search/OPD".

⇒ The Patent/Utility Model Number Search/OPD screen appears.

The screenshot shows the 'Patent/Utility Model Number Search/OPD' screen. The interface includes a top navigation bar with tabs for 'Patents/Utility Models', 'Designs', 'Trademark', and 'Trials & Appeals'. The left sidebar contains links for 'Patent/Utility Model Number Search/OPD', 'Patent/Utility Model Search', and 'Patent/Utility Model Classification Search (PMGS)'. The main content area has a title 'Patent/Utility Model Number Search/OPD' and a 'Help' button. Below the title, there is instructional text: 'If you select a document, you can retrieve various publications including patents/utility models, foreign documents, and non-patent documents (journals of technical disclosure). If you select OPD retrieval, you can view application information and examination information (dossier information) at patent offices around the world. Select an issued country/region/issued organization and type, and enter a number.' The search form includes a 'Search target' section with radio buttons for 'Document' (selected) and 'OPD Retrieval'. The 'Input type' section has radio buttons for 'Number' (selected), 'Number range', and 'DOCDB'. Below this, there are three input fields: 'Publication country/region/office' (set to 'Japan (JP)'), 'Number type' (set to 'Patent application number'), and 'Number' (set to '2004-106468'). At the bottom, there is a 'Search' button and a 'Clear' button. Red dashed boxes and numbers 1, 2, and 3 highlight the navigation path, the search form area, and the search button respectively.

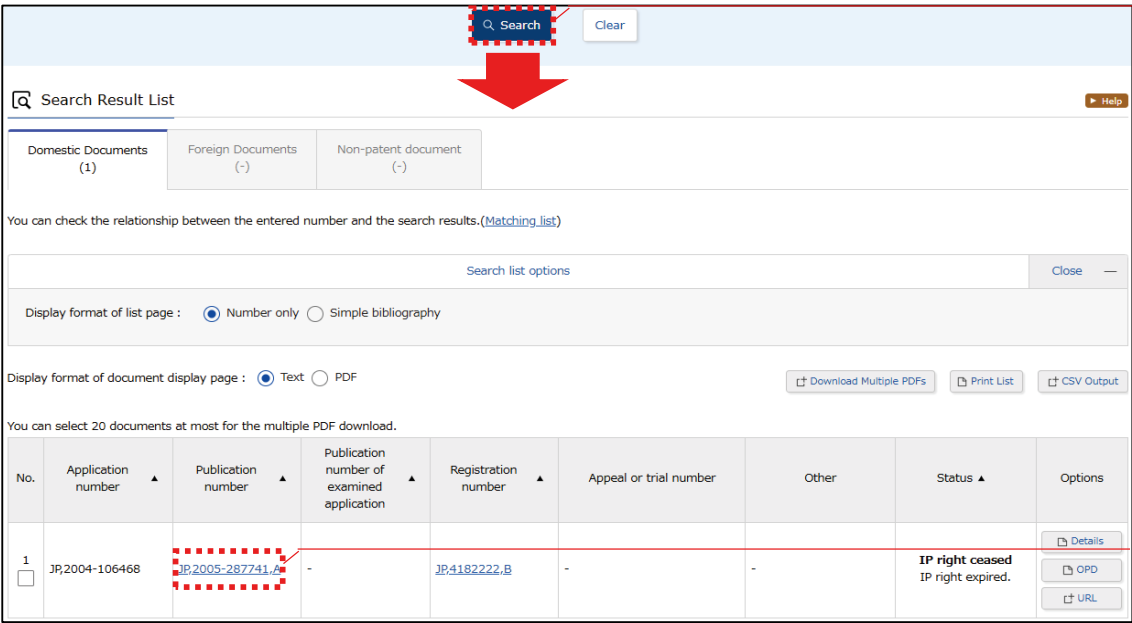

2. Enter the search criteria.

In this example, enter the following criteria.

- In "Search target", select "Document".
- In "Input type", select "Number".
- In "Publication country/region/office", select "Japan (JP)".
- In "Number type", select "Patent application number".
- In "Number", enter "2004-106468".

3. Click the "Search" button.

⇒ The Search Result List screen appears.

3.

Search

Clear

[Download Multiple PDFs](#) [Print List](#) [CSV Output](#)

You can select 20 documents at most for the multiple PDF download.

No.	Application number ▲	Publication number ▲	Publication number of examined application ▲	Registration number ▲	Appeal or trial number	Other	Status ▲	Options
1 ☐	JP,2004-106468	JP,2005-287741,A	-	JP,4182222,B	-	-	IP right ceased IP right expired.	Details OPD URL

4.

4. Select the link of the document number for the publication you wish to view.
In this example, select "JP,2005-287741,A" in the "Publication number" column.

If no document matches the entered criteria, the document number will not appear as a link in the search result list. Try using different search criteria.

⇒ The Document Display screen appears.

The screenshot shows the 'Document Display' interface for the patent JP,2005-287741,A. The title is 'Grant (Full renewal or maintenance fee paid.)'. Navigation buttons include 'Previous document', '1 of 1', 'Display', and 'Next document'. Action buttons include 'Registration gazette', 'Entire PDF Document', 'Details', 'OPD', 'Licensable Patent DB', 'Search key', 'URL', and 'Mistranslation'. The display format is set to 'Text' (selected) over 'PDF'. A primary document link 'PAJ' is provided. A notice states: '* NOTICE * JPO and INPIT are not responsible for any damages caused by the use of this translation.'

The interface is divided into two main panels: 'Bibliography' and 'Drawings'.

Bibliography Panel: Contains detailed patent information including publication country (JP), kind of official gazette (A), publication number (2005287741), date of publication of application (20051020), title of the invention (BATTERY-LESS LIGHT EMITTING DEVICE EMITTING LIGHT AND SOUND SIMULTANEOUSLY), international patent classification (A63H 5/00), and applicant information (NATIONAL INSTITUTE OF ADVANCED INDUSTRIAL & TECHNOLOGY). It also lists representative identification numbers and patent attorney details.

Drawings Panel: Displays 'Representative drawing' 1 and 2. Drawing 1 is a perspective view of a device with components labeled 10, 11, 12, 13, 14, and 15. Drawing 2 is a cross-sectional view of the same device, showing internal components labeled 11a, 12a, 13a, 14a, and 15a. An 'Enlarge and Rotate' button is available for the drawings.

At the bottom, there are three expandable sections: 'Overview', 'Scope of Claims', and 'Detailed Description', each with an 'Open' button and a plus sign.

Tip

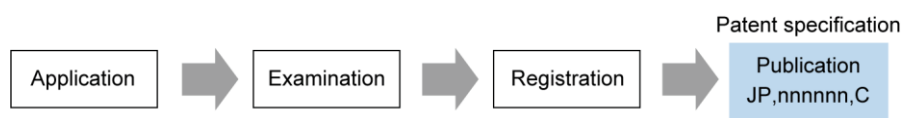

Changes to the patent publication system

Under the present patent system, a "publication of unexamined patent application" is issued for every application pending in the JPO, from the application date until one year and six months after the application date. A "patent publication" is issued only for patents that have been examined and registered.

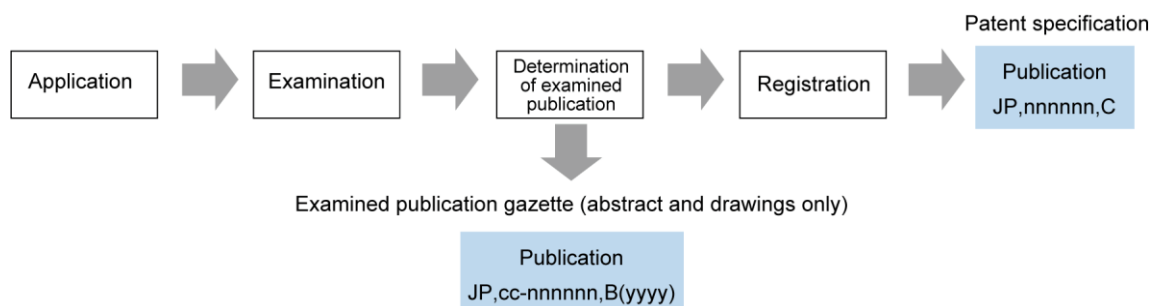

This system has been in effect since Heisei 8 (1996). Before that, different types of publications were issued in different eras. Although all publications issued from the Meiji era onward can be viewed through J-PlatPat, publication names differ depending on the era, and thus care should be exercised when selecting search targets.

The following illustrates how publications were issued in each era.

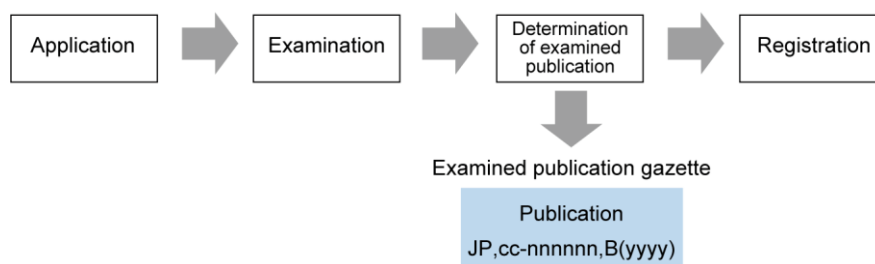

- From Meiji 21 (1888) to Taisho 10 (1921)

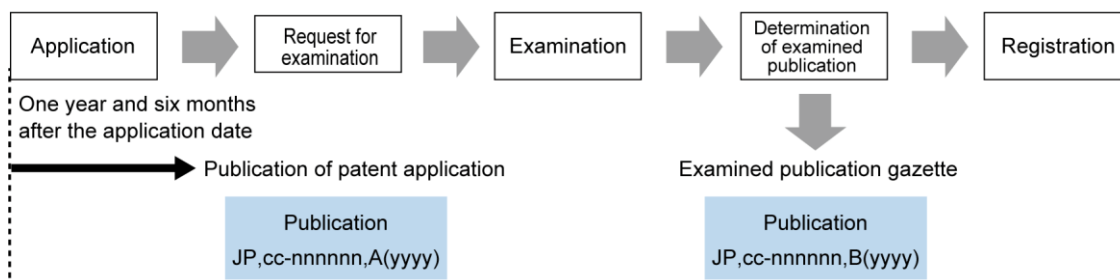

- From Taisho 11 (1922) to Showa 24 (1949) [introduction of system of publication after examination]

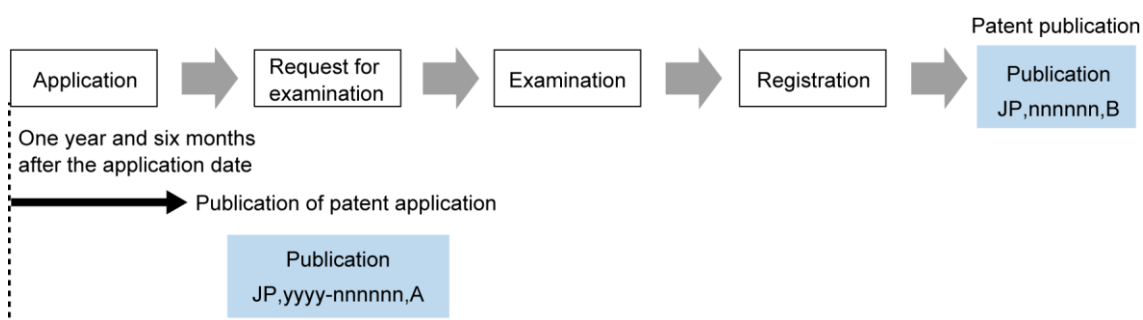

- From Showa 25 (1950) to Showa 45 (1970) [abolition of descriptions]

- From Showa 46 (1971) to March of Heisei 8 (1996) [introduction of system of public disclosure]

- From April of Heisei 8 (1996) to present [abolition of system of publication after examination]

5.2 Searching Patents and Utility Models by Keyword [Patent/Utility Model Search]

This section explains how to search documents using keywords such as bibliographic item, classification (FI, F-term, IPC), abstract, scope of claims, and full publication text (excluding bibliography).

 ["FI" \(P.188\)](#), ["F-term" \(P.187\)](#), ["IPC" \(P.188\)](#), ["Japanese Abstract" \(P.189\)](#)

Operation Example

Find out what kind of technical information has been published as of October 2005 for "風鈴".

1. From the global navigation, select "Patents/Utility Models" - "Patent/Utility Model Search".

⇒ The Patent/Utility Model Search screen appears.

The screenshot shows the 'Patent/Utility Model Search' interface. Red dashed boxes and numbers 1 through 4 highlight specific areas:

- 1.** Points to the 'Patent/Utility Model Search' tab in the top navigation bar.
- 2.** Points to the 'Selective Input' tab in the sub-navigation bar.
- 3.** Points to the 'Search target text' section, specifically the 'Japanese text' radio button.
- 4.** Points to the 'Search' button at the bottom of the form.

The form includes the following sections:

- Search target text:** Radio buttons for 'Japanese text' (selected) and 'English text'.
- Document types:** Checkboxes for 'Domestic Documents' (checked), 'Foreign Documents', 'Non-patent document', and 'J-GLOBAL'.
- Search keywords:** A list of search items with 'Full text' selected. Keywords entered include '風鈴' (fuzuru), 'インフルエンザ' (influenza), '半導体記憶装置' (semiconductor memory device), and '組成物' (composition).
- Exclusion keywords:** A field to specify keywords to exclude from the search result.
- Search options:** A section for specifying search criteria, including 'Main theme' (Ex: 4K018), 'Sub theme' (Ex: 2C999,4H004,4H104), 'Date options' (Publication date/issued date: 20051001 to 20051031), 'Registered item search' (Filter items by registration date), 'Search by status' (Narrow down by items for "Application/Right not expired"), and 'Search by stage'.

2. Confirm that the "Selective Input" tab is displayed.

3. Enter the search criteria.

In this example, enter the following criteria.

- In "Search target text", select "Japanese text".
- In "Document types", select "Domestic Documents".
- In the "Search item" field of "Search keywords", select "Full text".
- In the "Keyword" field of "Search keywords", enter "風鈴".
- Open the search option area and select "Publication date/issued date" in "Date options".
- In "Date options", enter "20051001" to "20051031".

4. Click the "Search" button.

⇒ The Search Result List screen appears.

4.

 Tip**What are non-patent documents?**

J-PlatPat lists the following primary documents, authorized by their copyright holders, as non-patent documents.

- Journals of technical disclosure
- Manuals (CSDB)
- Independent books (CSDB)
- Domestic technical journals (CSDB)
- Non-technical journals (CSDB)
- Foreign academic papers (CSDB)
- Domestic academic papers (CSDB)
- Company technical reports (CSDB)
- Organization bulletins (CSDB)
- Proceedings (CSDB)

"CSDB" is a JPO database which stores computer software-related technical documents, including software manuals and non-technical journals.

 Tip**J-GLOBAL search and link**

J-GLOBAL is an online service, provided by the Japan Science and Technology Agency, through which domestic researchers and scholarly articles can be searched.

Selecting "J-GLOBAL" in "Document types" and searching makes it possible to search JGLOBAL for non-patent documents, science technology terms, chemical substances, and materials information.

5.3 Narrowing Down Patent Search Results Using Search Function to Narrow Down Legal Status [Patent/Utility Model Search]

By specifying "Status Search" and "Stage Search" in Search Options, you can further narrow down the search results.

Attention

- If the search results before narrowing down by legal status are within 3000, further narrowing down by "Status Search" and "Stage Search" specified in Search Option is performed.
- If the number of search results before narrowing down exceeds 3,000, further narrowing down by "Status search" and "Stage search" specified in Search Options will not be performed.
- Change other search conditions and perform the search.

Narrowing Down the Search Results by Status Search ---

This section explains how to further narrow down by "Status Search".

Operation Example

Narrow down the search results to only Items for which patent rights have not expired and items for which patent applications are pending.

1. From the global navigation, select "Patents/Utility Models" - "Patent/Utility Model Search".

⇒ The Patent/Utility Model Search screen appears.

The screenshot shows the Patent/Utility Model Search interface. Red dashed boxes and numbers indicate key areas:

- 1.** Points to the "Patent/Utility Model Search" tab in the top navigation bar.
- 2.** Points to the "Selective Input" tab in the search input section.
- 3.** Points to the main search criteria section, which includes:
 - Search target text:** Radio buttons for "Japanese text" (selected) and "English text".
 - Document types:** Checkboxes for "Domestic Documents" (checked), "Foreign Documents", "Non-patent document", and "J-GLOBAL".
 - Search keywords:** A list of keyword fields with dropdown menus for "Search item" (Full text, Bibliography, Title/name of invention or device, Abstract) and input fields for "Keyword".
 - Exclusion keywords:** A field to specify keywords to exclude from the search result.
 - Search options:** A section with "Main theme" and "Sub theme" dropdowns, "Date options" (Publication date/issued date), "Registered item search" (Filter items by registration date), "Search by status" (Narrow down by items for "Application/Right not expired"), and "Search by stage".

2. Confirm that the "Selective Input" tab is displayed.

3. Enter the search criteria.

In this example, enter the following criteria.

- In "Search target text", select "Japanese text".
- In "Document types", select "Domestic Documents".
- In the "Search item" field of "Search keywords", select "Full text".
- In the "Keyword" field of "Search keywords", enter "□ボット".
- Open the search option area and select "Publication date/issued date" in "Date options".
- In "Date options", enter "20051001" to "20060131".

4. Click the "Search" button.

⇒ The Search Result List screen appears.

4.

5. Perform Status Search to narrow down.

Keeping the search criteria in 3., enter the following criteria.

- Open the search options area and select "Filter items by items for which rights have not been expired and pending items" in "Status search".

5.

6. Click the "Search" button.

⇒ The Search Result List screen appears narrowed down to only Items for which patent rights have not expired and items for which patent applications are pending.

6.

7. Select the link of the document number for the document you wish to view.

⇒ The Document Display screen appears.

Narrowing Down the Search Results by Stage Search

This section explains how to further narrow down by "Stage Search".

Operation Example

Narrow down the search results to items that are before the request for substantive examination the request for substantive examination.

1. From the global navigation, select "Patents/Utility Models" - "Patent/Utility Model Search".

⇒ The Patent/Utility Model Search screen appears.

The screenshot shows the Patent/Utility Model Search interface. Red dashed boxes and numbers indicate key areas:

- 1.** Points to the navigation menu on the left, specifically the "Patent/Utility Model Search" link.
- 2.** Points to the "Selective Input" tab, which is selected among "Logical Expression Input" and "Search History".
- 3.** Points to the main search area, which includes:
 - Search target text (Japanese text selected).
 - Document types (Domestic Documents checked).
 - Search keywords (Full text, Bibliography, Title/name of invention or device, Abstract).
 - Exclusion keywords (Specify a keyword to exclude from the search result).
 - Search options (Main theme, Sub theme, Date options, Registered item search, Search by status, Search by stage).

At the bottom, there are buttons for "Search", "Clear", "Save Search Condition", and "Create Logical Expression from Criteria".

2. Confirm that the "Selective Input" tab is displayed.

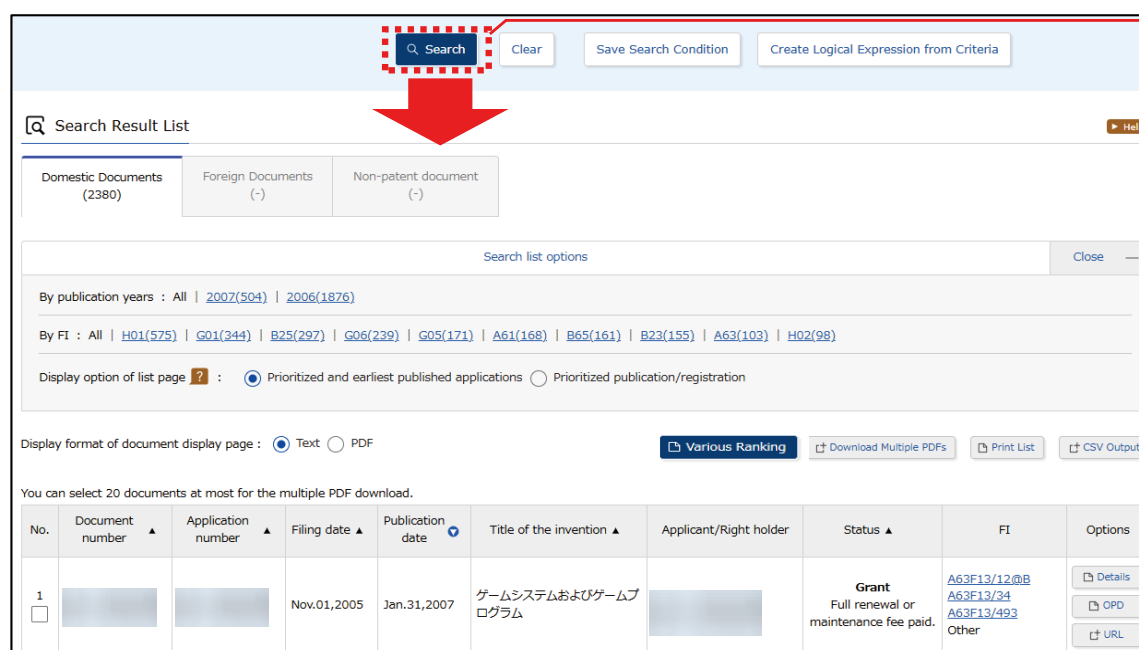

3. Enter the search criteria.

In this example, enter the following criteria.

- In "Search target text", select "Japanese text".
- In "Document types", select "Domestic Documents".
- In the "Search item" field of "Search keywords", select "Full text".
- In the "Keyword" field of "Search keywords", enter "□ボット".
- Open the search option area and select "Publication date/issued date" in "Date options".
- In "Date options", enter "20061001" to "20070131".

4. Click the "Search" button.

⇒ The Search Result List screen appears.

1			Nov.01,2005	Jan.31,2007	ゲームシステムおよびゲームプログラム		Grant Full renewal or maintenance fee paid.	A63F13/12@B A63F13/24 A63F13/493 Other	Details OPD URL

5. Perform Stage Search to narrow down.

Keeping the search criteria in 3., enter the following criteria.

- Open the search options area and select "Filing" in "Stage search".

6. Perform Stage Search to narrow down.

⇒ The Search result list screen appears with the Stage narrowed down to "Filing".

7. Select the link of the document number for the document you wish to view.

⇒ The Document Display screen appears.

5.4 Saving Search Criteria (Logical Expression) and Repeating Patent and Utility Model Search Using Same Search Criteria [Patent/Utility Model Search]

When saving search criteria and repeating a search using the same search criteria, logical expressions can be used to avoid entering criteria. This section explains how to search using logical expressions.

Operation Example

Save the search criteria used in the Operation Example in ["5.2 Searching Patents and Utility Models by Keyword \[Patent/Utility Model Search\]" \(P.83\)](#) as a logical expression and repeat the search using the saved logical expression.

A logical expression must be created before executing a logical expression search. Create a logical expression as follows.

See ["Searching with a Logical Expression" \(P.103\)](#) if a logical expression is already saved, or if you will enter a logical expression directly using operators.

- (1) ["Creating a Logical Expression" \(P.96\)](#)
- (2) ["Saving a Logical Expression" \(P.100\)](#)
- (3) ["Searching with a Logical Expression" \(P.103\)](#)

Creating a Logical Expression

This section explains how to create logical expressions.

The following methods can be used to create a logical expression to use in searches.

- Inputting a search criteria on the "Selective Input" tab of the Patent/Utility Model Search screen and then turning it into a logical expression
Search criteria entered as per normal searches can be automatically converted into a logical expression, making it easy to create logical expressions.

- Directly entering logical expressions using the "Logical Expression Input" tab in the Patent/Utility Model Search screen
See "[Appendix A Direct Entry of Logical Expressions](#)" (P.180) for how to create a logical expression for direct input using operators.

Operation Example

Create a logical expression from the search criteria used in the Operation Example in "[5.2 Searching Patents and Utility Models by Keyword \[Patent/Utility Model Search\]](#)" (P.83).

1. From the global navigation, select "Patents/Utility Models" - "Patent/Utility Model Search".

⇒ The Patent/Utility Model Search screen appears.

The screenshot shows the 'Patent/Utility Model Search' interface. Red dashed boxes and numbers highlight specific areas:

- 1.** Points to the 'Patent/Utility Model Search' link in the top navigation bar.
- 2.** Points to the 'Selective Input' tab in the 'Logical Expression Input' section.
- 3.** Points to the main search criteria area, which includes 'Search target text' (set to Japanese text), 'Document types' (with 'Domestic Documents' selected), 'Search keywords' (with 'Full text' selected and keyword '風鈴'), 'Exclusion keywords', 'Search options' (with 'Main theme' and 'Sub theme' fields), and 'Date options' (with 'Publication date/issued date' selected and range '20051001' to '20051031').
- 4.** Points to the 'Search' button at the bottom right of the form.

2. Confirm that the "Selective Input" tab is displayed.

3. Enter the search criteria.

In this example, enter the following criteria.

- In "Search target text", select "Japanese text".
- In "Document types", select "Domestic Documents".
- In the "Search item" field of "Search keywords", select "Full text".
- In the "Keyword" field of "Search keywords", enter "風鈴".
- Open the search option area and select "Publication date/issued date" in "Date options".
- In "Date options", enter "20051001" to "20051031".

4. Click the "Create Logical Expression from Criteria" button.

⇒ The display switches to the "Logical Expression Input" tab and the logical expression appears in the "Logical expression" field.

To save the created logical expression, perform the save operations in the following "Saving a Logical Expression" (P.100), while still in this screen. To search without saving, click the "Search" button.

The screenshot shows the 'Logical Expression Input' tab of a search interface. At the top, there are three tabs: 'Selective Input', 'Logical Expression Input' (active), and 'Search History'. Below the tabs are buttons for 'Load Logical Expression' and 'Save Logical Expression'. A message states: 'You can save/load input conditions and logical expressions. Search options are also saved.' Below this, there's a 'Search target text' section with radio buttons for 'Japanese text' (selected) and 'English text'. A 'Document types' section includes checkboxes for 'Domestic Documents' (checked), 'Foreign Documents', and 'Non-patent document'. The 'Logical expression' field, which is highlighted with a red dashed border, contains the text '[風鈴/TX]'. Below this is the 'Search options' section, which includes fields for 'Main theme' (Example: 4K018) and 'Sub theme' (Example: 2C999,4H004,4H104). It also has a 'Date options' section with a dropdown for 'Publication date/issued date' and date range inputs (20051001 ~ 20051031). Other options include 'Registered item search' with a checkbox for 'Filter items by registration date', 'Search by status' with a checkbox for 'Narrow down by items for "Application/Right not expired"', and 'Search by stage' with a dropdown menu. At the bottom, there are 'Search' and 'Clear' buttons.

Saving a Logical Expression

This section explains how to save a created logical expression in the browser.

Logical expressions are saved on a browser-by-browser basis. If the browser cache is cleared in local storage, saved logical expressions will be cleared as well.

Operation Example

Save a logical expression created according to ["Creating a Logical Expression" \(P.96\)](#).

1. Click the "Save Logical Expression" button with the logical expression created in the "Logical Expression Input" tab of the Patent/Utility Model Search screen.

Selective Input Logical Expression Input Search History

Load Logical Expression Save Logical Expression

You can save/load input conditions and logical expressions. Search options are also saved.

Search target text

☒ Japanese text ☐ English text

Publication date/issued date 20051001 ~ 20051031

+ Add

Registered item search ?

☐ Filter items by registration date

Search by status

☐ Narrow down by items for "Application/Right not expired"

Search by stage

-

Search Clear

⇒ The Save Logical Expression screen appears.

Save Logical Expression

Input conditions, logical expressions, and search options are saved.
Select the save destination, and click the "Save" button. (Up to 3 items can be saved.)
* If a logical expression has already been saved at the save destination, it will be overwritten.

Sel.	No.	Logical expression
☒	1	-
☐	2	-
☐	3	-

Save

2. Select a destination number in the "Sel." column.

Three logical expressions can be saved. Selecting the number used for saving an existing logical expression will overwrite that logical expression.

3. Click the "Save" button.

⇒ The logical expression is saved in the browser.

Searching with a Logical Expression

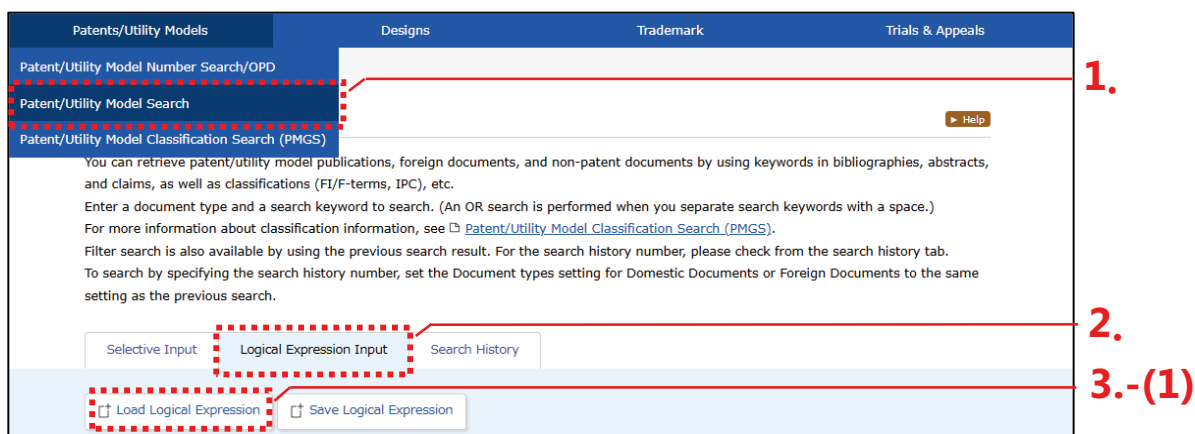

This section explains how to search patents and utility models using logical expressions.

Operation Example

Load a logical expression saved in "Saving a Logical Expression" (P.100) to search patents and utility models.

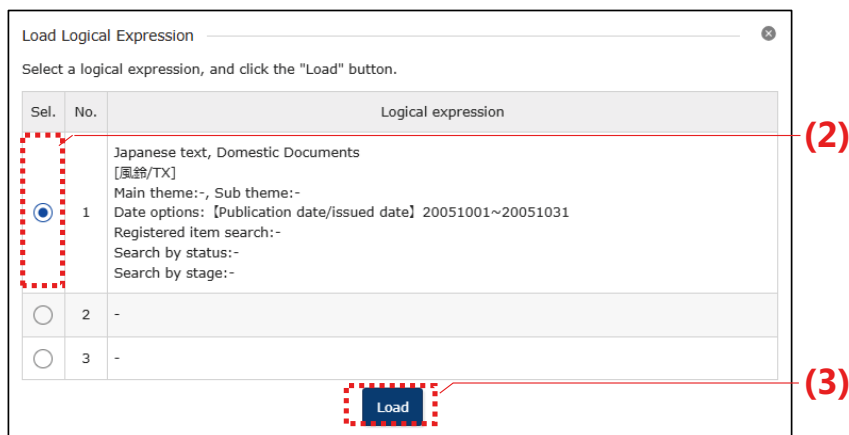

1. From the global navigation, select "Patents/Utility Models" - "Patent/Utility Model Search".
⇒ The Patent/Utility Model Search screen appears.

2. Select the "Logical Expression Input" tab.
⇒ The "Logical Expression Input" tab appears.

3. Enter a logical expression.
In this example, load a saved logical expression using the following procedure.

- (1) Click the "Load Logical Expression" button.
The Load Logical Expression screen appears.

- (2) Select the number of the logical expression you wish to load in the "Sel." column.

(3) Click the "Load" button.

The logical expression is loaded in the "Logical Expression Input" tab.

To specify date options, open "Search options" and enter a date in "Date options".

To edit the loaded logical expression, display the "Selective Input" tab, change the search criteria, and click the "Create Logical Expression from Criteria" button.

See Help for how to edit logical expressions directly in the "Logical expression" field.

4. Click the "Search" button.

⇒ The Search Result List screen appears.

4.

5.5 Searching Patents and Utility Models by Using Search History

Number[Patent/Utility Model Search]

Once a search result history is obtained, it will be automatically stored as a search history number. The search history can also be used as a population, and can be multiplied by other keywords or another search history. This section explains how to search using the search history number.

The search history is saved only when the document types are "Domestic Documents" or the "Foreign Documents".

The search history saves up to 20 items. If the search history exceeds 20 items, the oldest is deleted.

The search history is saved on a browser-by tab basis. If the browser tab is closed, the search history information will be deleted as well.

When the search history information is displayed in a different browser or across multiple tabs, the search history information is saved in each browser-by tab basis.

When searching using "search history number" in "Search item", the search history number searches based on the history of the previous search results for "search history number".

Therefore, the search result from the search using the search history number, and the search result using the Save Search Condition and the logical expression (search condition) saved from Save Logical Expression may not match.

Operation Example

Search using the search history number "#1" searched in the operation example in ["5.2 Searching Patents and Utility Models by Keyword \[Patent/Utility Model Search\]" \(P.83\)](#), and the search history number "#2" searched using different search criteria, with additional search criteria.

1. Search for "5.2 Searching Patents and Utility Models by Keyword [Patent/Utility Model Search]" (P.83).

In addition, enter search criteria different from "5.2 Searching Patents and Utility Models by Keyword [Patent/Utility Model Search]" (P.83) and perform a search.

In this example, enter the following criteria.

- In "Search target text", select "Japanese text".
- In "Document types", select "Domestic Documents".
- In the "Search item" field of "Search keywords", select "Bibliography".
- In the "Keyword" field of "Search keywords", enter "音".
- Open the search option area and select "Filing date" in "Date options".
- In "Date options", enter "20040301" to "20040331".

Select the "Search History" tab after performing two searches.

For information on how to search, see "5.2 Searching Patents and Utility Models by Keyword [Patent/Utility Model Search]" (P.83).

Patent/Utility Model Search

You can retrieve patent/utility model publications, foreign documents, and non-patent documents by using keywords in bibliographies, abstracts, and claims, as well as classifications (FI/F-terms, IPC), etc.
 Enter a document type and a search keyword to search. (An OR search is performed when you separate search keywords with a space.)
 For more information about classification information, see [Patent/Utility Model Classification Search \(PMGS\)](#).
 Filter search is also available by using the previous search result. For the search history number, please check from the search history tab.
 To search by specifying the search history number, set the Document types setting for Domestic Documents or Foreign Documents to the same setting as the previous search.

 Proximity Search

Delete AND

2. Select the link of the search history number "#1" from the search history list.

⇒ The search history number is automatically input in the "Search history number" field.

Selective Input Logical Expression Input Search History

If the search history exceeds 20 items, the oldest one will be deleted.
When the browser tab is closed, all will be deleted.

Search History Number
Ex: #1 Set to Selective Input

+ Add Search Number + Add Exclusion Search Number

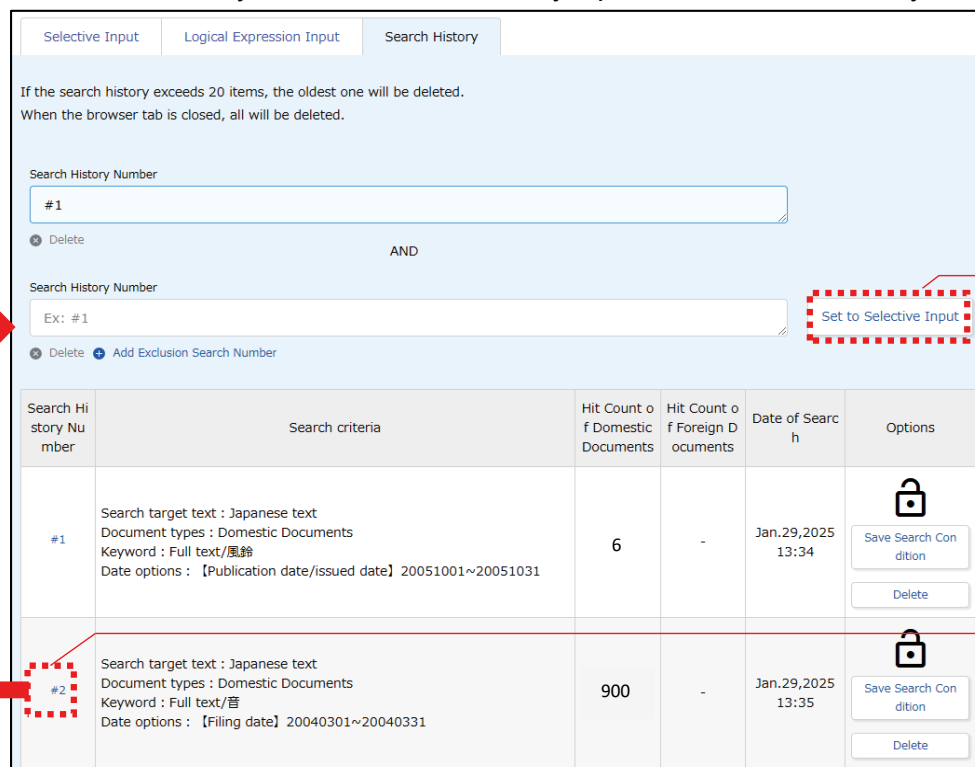

Search History Number	Search criteria	Hit Count of Domestic Documents	Hit Count of Foreign Documents	Date of Search	Options
#1	Search target text : Japanese text Document types : Domestic Documents Keyword : Full text/風鈴 Date options : 【Publication date/issued date】 20051001~20051031	6	-	Jan.29,2025 13:34	 Save Search Condition Delete
#2	Search target text : Japanese text Document types : Domestic Documents Keyword : Full text/音 Date options : 【Filing date】 20040301~20040331	900	-	Jan.29,2025 13:35	 Save Search Condition Delete

To set multiple search history numbers, continue to select the link of the search history number you want to set.

3. Click the "Add Search Number" button and select the input area for the added "Search history number" (make it active).

Select the link of the search history number "#2" from the search history list.

⇒ The search history number is automatically input in the "Search history number" field.

Selective Input Logical Expression Input Search History

If the search history exceeds 20 items, the oldest one will be deleted.
When the browser tab is closed, all will be deleted.

Search History Number
#1

+ Delete AND + Add Exclusion Search Number

Search History Number
Ex: #1 Set to Selective Input

+ Delete + Add Exclusion Search Number

Search History Number	Search criteria	Hit Count of Domestic Documents	Hit Count of Foreign Documents	Date of Search	Options
#1	Search target text : Japanese text Document types : Domestic Documents Keyword : Full text/風鈴 Date options : 【Publication date/issued date】 20051001~20051031	6	-	Jan.29,2025 13:34	 Save Search Condition Delete
#2	Search target text : Japanese text Document types : Domestic Documents Keyword : Full text/音 Date options : 【Filing date】 20040301~20040331	900	-	Jan.29,2025 13:35	 Save Search Condition Delete

4. Click the "Set the Selective Input" button.

⇒ The tab switches to the "Selective Input" tab, and all of the search history numbers input into the "Search History Number" field are automatically set to the "Search Keywords" in the "Selective Input" tab (The "Search item" is "Search history number").

5. Select "Document types", and click the "Search" button.

⇒ The "Search Result List" screen appears.

*The search history number searches based on the search result information from the previous search.

*When searching by specifying a search history number, "Domestic Documents" or "Foreign Documents" in "Document types" should be set to the same as when searching for the specified search history number.

Tip

To avoid the search history from being deleted

When the search history exceeds 20 items, it will delete from the oldest one, but when it is locked, it will not be deleted.

However, when the browser tab is closed, all of the search history will be closed.

- (1) Click the key icon for the search history which you want to lock.

⇒ The search history is locked, Click it again to unlock.

Selective Input Logical Expression Input Search History

If the search history exceeds 20 items, the oldest one will be deleted.
When the browser tab is closed, all will be deleted.

#1	Search target text : Japanese text Document types : Domestic Documents Keyword : Full text/要約 Date options : 【Publication date/issued date】 20051001~20051031	6	-	Oct.22,2024 10:09	 Save Search Condition

Tip

To save the search criteria of the search history

When a search is performed on the "Selective Input" tab, the "Save Search Condition" button appears.

- (1) Click the "Save Search Condition" button of the search history to save the search criteria.

⇒ The search criteria is saved in the browser.

Five search criteria can be saved. A new search criteria will overwrite the saved search criteria. For how to search using the saved search criteria, refer to ["Searching with a Saved Search Condition" \(P.72\)](#).

Selective Input Logical Expression Input Search History

If the search history exceeds 20 items, the oldest one will be deleted.
When the browser tab is closed, all will be deleted.

Search History Number

#1 Set to Selective Input

+ Add Search Number + Add Exclusion Search Number

Search History Number	Search criteria	Hit Count of Domestic Documents	Hit Count of Foreign Documents	Date of Search	Options
#1	Search target text : Japanese text Document types : Domestic Documents Keyword : Full text/風鈴 Date options : 【Publication date/issued date】 20051001~20051031	6	-	Oct.22,2024 10:09	 Save Search Condition Delete

Tip

To save the logical expression (search criteria) of the search history

When a search is performed on the "Logical Expression Input" tab, the "Save Logical Expression" button appears.

- (1) Click the "Save Logical Expression" button of the search history to save the search conditions.

⇒ The "Save Logical Expression" screen appears.

- (2) Select a destination number in the "Sel." column.

Three logical expressions can be saved. Selecting the number used for saving an existing logical expression will overwrite that logical expression.

- (3) Click the "Save" button.

⇒ The logical expression (search criteria) is saved in the browser.

For how to search using the saved logical expression (search criteria), refer to ["Searching with a Logical Expression" \(P.103\)](#).

Selective Input Logical Expression Input Search History

If the search history exceeds 20 items, the oldest one will be deleted.
When the browser tab is closed, all will be deleted.

5.6 Searching Patent and Utility Model Classifications [Patent/Utility Model Classification Search (PMGS)]

This section explains how to search for patent and utility model classifications.

The following method can be used to search for patent and utility model classifications.

- ["Searching Classifications \(FI, F-term, IPC\) by Keyword" \(P.112\)](#)
- ["Searching Classifications \(FI, F-term, IPC\) by Classification Code" \(P.118\)](#)
- ["Searching Classification \(FI\) in the "FI/Facet Simple Display" screen" \(P.121\)](#)

["FI" \(P.188\), "F-term" \(P.187\), "IPC" \(P.188\)](#)

Searching Classifications (FI, F-term, IPC) by Keyword

This section will describe how to search the FI, F-term, and IPC using keywords.

Operation Example

Search the FI for "illumination device with a built-in battery".

1. Select "Patents/Utility Models" - "Patent/Utility Model Classification Search (PMGS)" from the global navigation.

⇒ The Patent/Utility Model Classification Search (PMGS) screen appears.

2. Select the "Search by Keyword" tab.

⇒ The "Search by Keyword" tab appears.

3. Enter the search criteria.

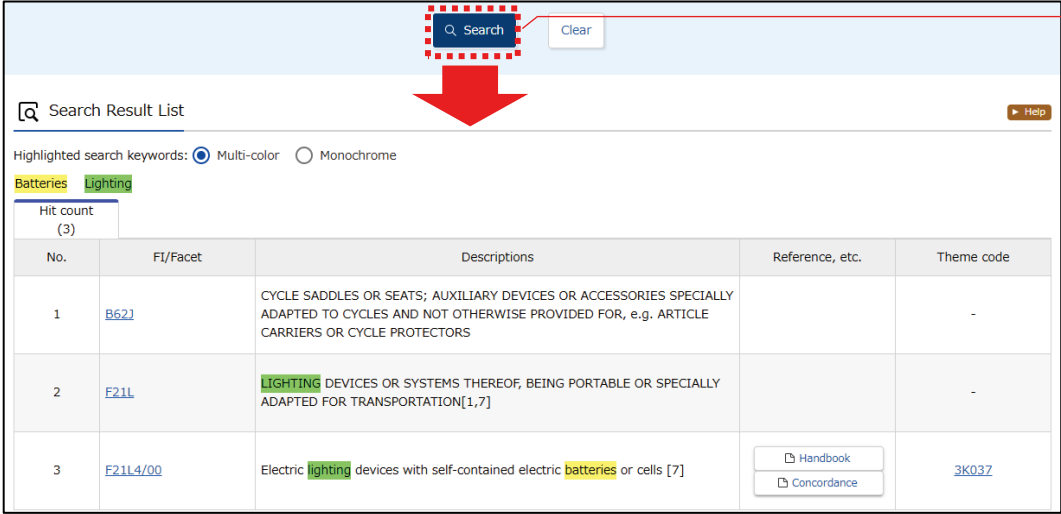

In this example, enter the following criteria.

- In "Search target", select "FI/Facet".
- In "Display type", select "FI".
- In "Keyword", select "Within FI/facet", and enter "Batteries*Lighting" in the input field.
An AND search can be made by entering an asterisk (*) between multiple keywords to be searched for. For AND searches, see "3.1 AND Search, OR Search, and NOT Search" (P.30).

Glossary "Facet" (P.188)

4. Click the "Search" button.

⇒ The Search Result List screen appears with the text corresponding to hits highlighted.

Search Result List

Highlighted search keywords: ☒ Multi-color ☐ Monochrome

Batteries Lighting

Hit count (3)

No.	FI/Facet	Descriptions	Reference, etc.	Theme code
1	B62J	CYCLE SADDLES OR SEATS; AUXILIARY DEVICES OR ACCESSORIES SPECIALLY ADAPTED TO CYCLES AND NOT OTHERWISE PROVIDED FOR, e.g. ARTICLE CARRIERS OR CYCLE PROTECTORS		-
2	F21L	LIGHTING DEVICES OR SYSTEMS THEREOF, BEING PORTABLE OR SPECIALLY ADAPTED FOR TRANSPORTATION[1,7]		-
3	F21L4/00	Electric lighting devices with self-contained electric batteries or cells [7]	Handbook Concordance	3K037

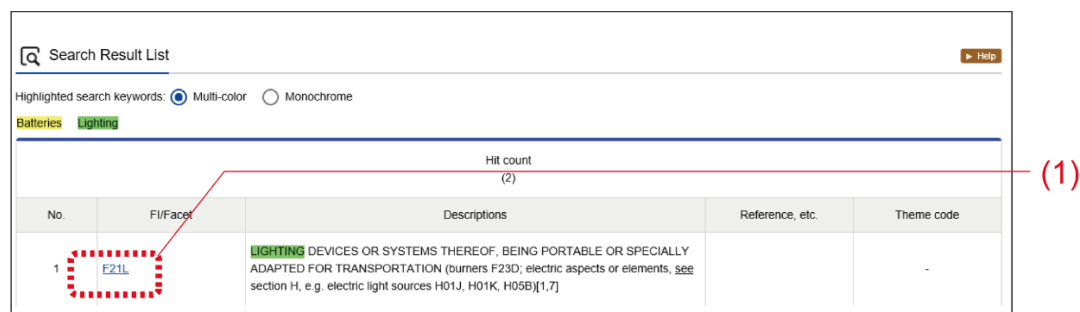

Patent/utility model searches can be made using the retrieved classification. See the following hint for details.

Tip

Using a retrieved FI, F-term, or IPC to search for patents and utility models

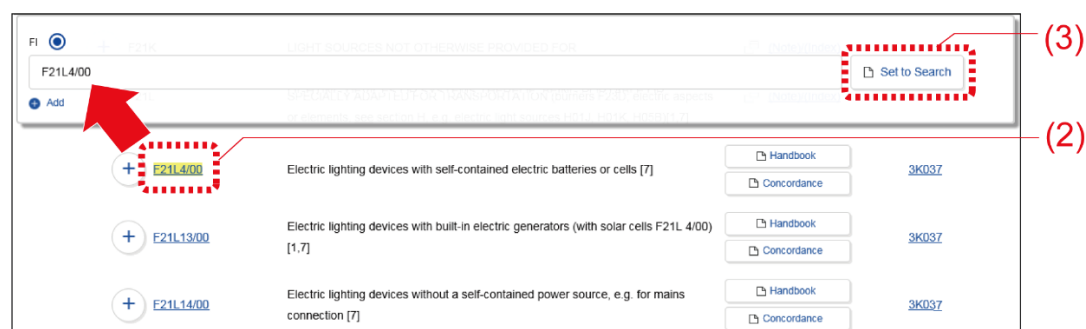

The following describes an example of searching for patents and utility models by setting "F21L4/00" as the FI.

- (1) Select the link for the FI/Facet "F21L4/00" in the search result list of "Searching Classifications (FI, F-term, IPC) by Keyword" (P.112).

The screen switches to the "Code Inquiry" tab, with the details of the selected FI/Facet displayed in a tree view.

- (2) Select the link for the FI/Facet in the tree view.
The FI/Facet is automatically entered in the "FI" field.

To set multiple codes, select the links of the FIs to be set.

- (3) Click the "Set to Search" button.

The Patent/Utility Model Search screen appears.

All FIs entered in the "FI" field are automatically set as "Search keywords" in the Patent/Utility Model Search screen (with "FI" as the "Search item").

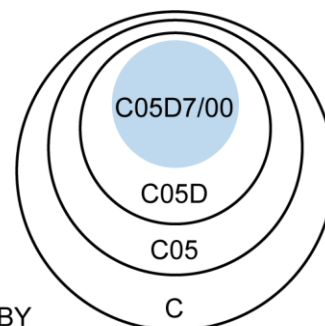

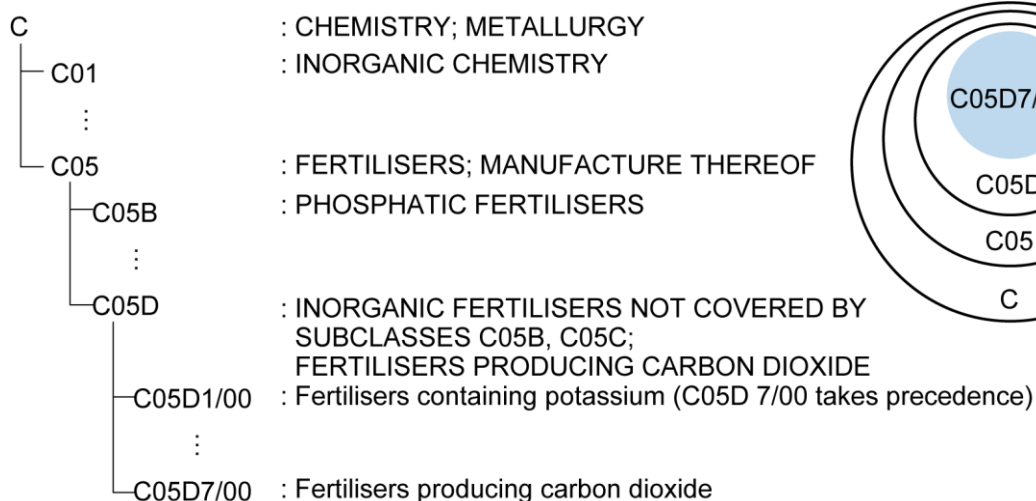

For how to search using the Patent/Utility Model Search screen, see "5.2 Searching Patents and Utility Models by Keyword [Patent/Utility Model Search]" (P.83).

Tip

What is IPC (International Patent Classification)?

International Patent Classification is an internationally-unified classification system for patent documents which is also given to all patent documents published in Japan.

Example of IPC classification system (C05D7/00 (carbon dioxide-producing fertilizers))

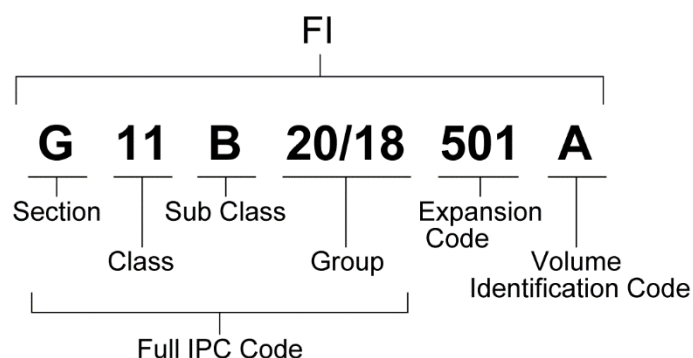

Tip

What is FI?

FI is basically a detailed extension from the latest version (Ver. 8) of the IPC, but is partially based on an earlier version, and is formatted as one or both of the following.

- Full IPC code (up to group) + three-digit number (expansion code)
- One letter (volume identification code)

FI is used as a search key common for publications from all years, irrespective of IPC revisions. FI therefore enables the simultaneous search of all documents whatever the IPC version may be.

Tip

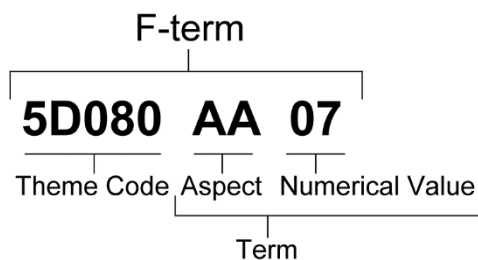

What is F-term?

"F-term" takes its name from File Forming Term, and is a search code system developed on the basis of a paperless project by the JPO to enable advanced searches.

The purpose of F-term is to enable finer classifications of FI and transverse or multi-faceted searches, and has been developed particularly for fields having a large number of items (approximately 2,600).

F-term is a 9-digit alphanumeric character string consisting of a 5-digit theme code, a 2-digit aspect, and a 2-digit numerical value. If the first five digits are omitted, the remaining 2-digit aspect and 2-digit numerical value are called a "term."

One patent document is given many codes, and publications issued in the year 2000 and later include F-terms. Using F-term skillfully makes it possible to search with less needless information returned.

Searching Classifications (FI, F-term, IPC) by Classification Code

This section will describe how to search the FI, F-term, and IPC using classification codes.

Operation Example

Find details on the theme code "2C150" listed in a publication.

1. Select "Patents/Utility Models" - "Patent/Utility Model Classification Search (PMGS)" from the global navigation.

⇒ The Patent/Utility Model Classification Search (PMGS) screen appears.

Patents/Utility Models | Designs | Trademark | Trials & Appeals

Patent/Utility Model Number Search/OPD

Patent/Utility Model Search

Patent/Utility Model Classification Search (PMGS)

Classification Search (PMGS) Help

You can retrieve classifications by keywords for FI/F-terms and IPC (latest version). You can also retrieve classifications by code. You can set classifications for patent/utility model searches using the code retrieval.

Simple display (FI/Facet Simple Display, F-term Simple Display, IPC (latest version) Simple Display) is convenient for viewing the listed classifications or printing the listed classifications.

It takes several months from the revision of FI, F-Term and IPC to be reflected in the PMGS.

For information related to classification, refer to [the Scheme parallel viewer \(Browsing the latest versions of FI and IPC\)](#), [Patent Map Guidance \(Former\) Information](#), [IPC Classification Table and Update Information](#), [CPC Information](#), [WIPO-IPC](#), and [Additional code list](#).

For revision/abolition information, refer to [FI Revision Information](#), [Theme Revision/Abolition Information](#), [Theme Code Table](#), [IPC Revision Table](#), [IPC Guidelines](#), and [Former IPC Version](#).

☐ BB00 EXERCISE OR PLAY Open +

Tip

Searching an IPC corresponding to FI (or vice versa)

This section describes an example of searching for an IPC corresponding to FI "F21L4/00".

- (1) Set the "Search target" to "FI/Facet" and search for "F21L4/00" as described in "Searching Classifications (FI, F-term, IPC) by Classification Code" (P.118).
- (2) Click the "Concordance" button on the same line as "F21L4/00" in the classification table tree at the bottom of the "Classification Display".

The Concordance Display (FI -> IPC (Latest Version)) screen appears, and you can then search for the latest version of the IPC corresponding to "F21L4/00".

Concordance Display (FI -> IPC (Latest Version))		
No.	FI	IPC (latest version)
1	F21L4/00	F21L4/00
2	F21L4/00.100	F21L4/00
3	F21L4/00.110	F21L4/00

Searching Classification (FI) in the "FI/Facet Simple Display" screen

This section will describe how to search classification (FI) in the "FI/Facet Simple Display" screen.

Operation Example

Search the FI "A01B1/02" listed in a publication.

1. Select "Patents/Utility Models" - "Patent/Utility Model Classification Search (PMGS)" from the global navigation and then confirm that the "Code Inquiry" tab is displayed.

The screenshot shows the 'Patent/Utility Model Classification Search (PMGS)' screen. The 'Patent/Utility Model Classification Search (PMGS)' link in the left navigation menu is highlighted with a red dashed box and labeled 1. The 'Code Inquiry' tab is selected and labeled 2. The search target is set to 'FI/Facet'.

2. Click the "FI/Facet Simple Display" link.

3. Confirm that the "FI-Section/Broad-Facet-Choice" screen is displayed.

⇒ The "revision date" pull-down menu only appears in Japanese display mode, and the latest revision date is selected as the default. About the classification by revision date in the past, please refer to the hint "How to refer to the information on FI as of a specific revision date" (P.122) below.

The screenshot shows the 'FI-Section/Broad-Facet-Choice' screen. The 'Classification Inquiry' section shows 'A01B1/02' and a 'Search' button. The 'Search' button is highlighted with a red dashed box and labeled 4. The 'Search' button is also labeled 5.

4. Enter a classification that you wish to search into "Classification inquiry".

5. Click the "Search" button.

⇒ The searched FI/Facet appears. Redirect to the latest revision date screen when FI is valid as of the latest revision date. Redirect to the right before the abolished revision date screen when searched an FI that is already abolished.

Tip

How to refer to the information on FI as of a specific revision date

Switching to the revision date is only available in Japanese display mode. You can switch to the English display mode only when the latest revision date is selected.

- (1) If you select a specific revision date from the "revision date" pull-down menu of each level of hierarchy, the FI information will be displayed. The revision date is available to be displayed are from those granted after November 2019.
- (2) If you select a revision date other than the latest one, the English display mode will not be displayed.

The display items on the FI/Facet Simple Display screen are below. However, these display items only appear in Japanese display mode.

- "新設" icon: A newly created FI appears with the "新設" icon as of the selected revision date.
- "廃止" icon: An abolished FI appears with the "廃止" icon as of the latest revision date.
- "移行先" link: FI appears with the link that shows which FI to be transferred to.

5.7 Searching Patent Applications and Examination-Related Information From Countries Around the World [Patent/ Utility Model Number Search/OPD]

This section explains how to search the One Portal Dossier for patent applications and examination-related information from countries around the world (dossier information).

[Glossary](#) "Dossier Information" (P.187)

Operation Example

Search for dossier information on application number "2006-529020" filed in Japan.

1. From the global navigation, select "Patents/Utility Models" - "Patent/Utility Model Number Search/OPD".

⇒ The Patent/Utility Model Number Search/OPD screen appears.

The screenshot shows the 'Patent/Utility Model Number Search/OPD' screen. Red dashed boxes and numbers 1, 2, and 3 highlight specific areas:

- 1.** Points to the 'Patent/Utility Model Number Search/OPD' link in the left navigation menu.
- 2.** Points to the search input area, which includes:
 - Search target:** Radio buttons for 'Document' and 'OPD Retrieval' (selected).
 - Input type:** Radio buttons for 'Number' (selected) and 'DOCDB'. A note states: 'Searches are performed only for the numbers entered.' for 'Number' and 'Include a country/region code for each number.' for 'DOCDB'.
 - Publication country/region/office:** A dropdown menu showing 'Japan (JP)'.
 - Number type:** A dropdown menu showing 'Patent application number'.
 - Number:** A text input field containing '2006-529020'.
- 3.** Points to the 'Search' button at the bottom of the form.

2. Enter the search criteria.

In this example, enter the following criteria.

- In "Search target", select "OPD Retrieval".
- In "Input type", select "Number".
- In "Publication country/region/office", select "Japan (JP)".
- In "Number type", select "Patent application number".
- In "Number", enter "2006-529020".

3. Click the "Search" button.

⇒ The One Portal Dossier (OPD) Search screen appears.

6.1 Searching Designs by Document Number [Design Number Search]

This section explains how to search documents by number, such as registration number or publication material number.

"Publication Material" (P.190)

Operation Example

Search for design registration number "1568234".

1. Select "Designs" - "Design Number Search" from the global navigation.

⇒ The Design Number Search screen appears.

The screenshot shows the 'Designs' section of the J-PlatPat interface. A red dashed box labeled '1.' highlights the 'Design Number Search' option in the global navigation menu. Another red dashed box labeled '2.' highlights the search input area, which includes the 'Input type' (Number selected), 'Number type' (Registration number selected), and the 'Number' field containing '1568234'. A third red dashed box labeled '3.' highlights the 'Search' button at the bottom of the form.

2. Enter the search criteria.

In this example, enter the following criteria.

- In "Input type", select "Number".
- In "Number type", select "Registration number".
- In "Number", enter "1568234".

3. Click the "Search" button.

⇒ The Search Result List screen appears.

3.

6.2 Searching Designs by Keyword [Design Search]

This section explains how to search for documents using keywords, such as design classifications or articles to the design.

Operation Example

Find what kind of designs are registered for "かばん".

1. Select "Designs" - "Design Search" from the global navigation.

⇒ The Design Search screen appears.

The screenshot shows the 'Design Search' interface. At the top, a navigation bar includes 'Patents/Utility Models', 'Designs', 'Trademark', and 'Trials & Appeals'. The 'Designs' section is active, showing a dropdown menu with options: 'Design Number Search', 'Design Search' (highlighted with a red dashed box and labeled '1'), 'Japanese design classification Search', and 'Graphic Image Design Search (External Link)'. Below the navigation bar, the main content area is titled 'Design Search' and contains instructions. A red dashed box labeled '2' encloses the search criteria section, which includes 'Document types' (with 'Domestic Gazette' selected), 'Search keywords' (with 'Relevant articles' selected and 'かばん' entered in the 'Keyword' field), and 'Exclusion keywords'. At the bottom, a red dashed box labeled '3' highlights the 'Search' button.

2. Enter the search criteria.

In this example, enter the following criteria.

- In "Document types", select "Domestic Gazette".
- In the "Search item" field of "Search keywords", select "Relevant articles".
- In the "Keyword" field of "Search keywords", enter "かばん".

3. Click the "Search" button.

⇒ The Search Result List screen appears.

4. Select the link of the document number for the document you wish to view.

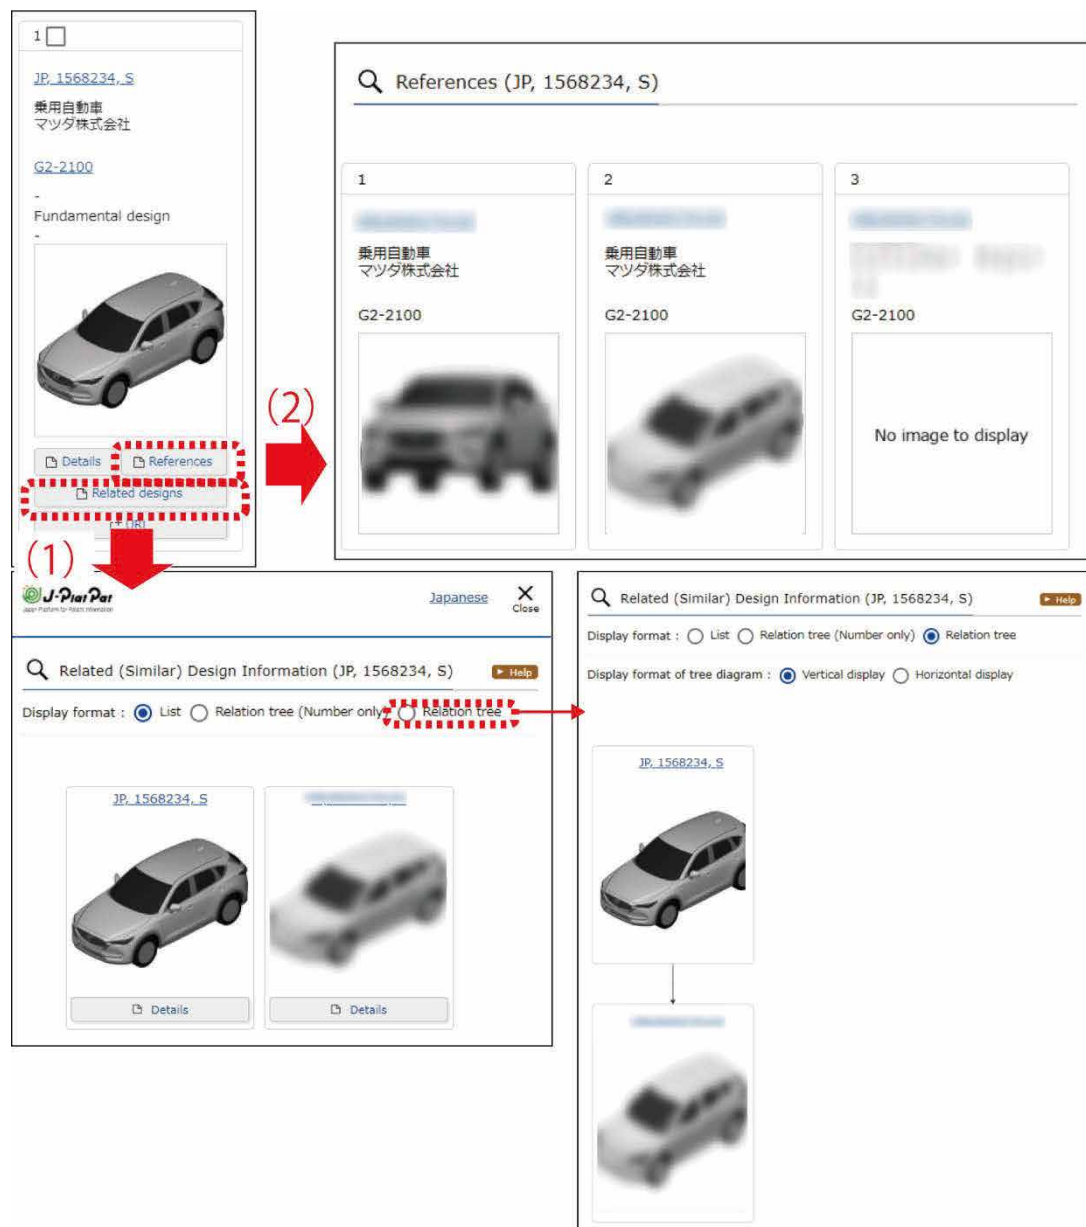

⇒ The Document Display screen appears.

Tip

Viewing fundamental designs, related designs (similar designs), and reference documents

This section explains how to search for fundamental designs, related designs (similar designs), and reference documents.

- (1) To search for fundamental designs and related designs (similar designs), click the "Related designs" button for the document in the Search Result List screen.
You can check the relations among them with the relation tree display.
- (2) To search for reference documents, click the "References" button for the document in the Search Result List screen.
A list of reference documents for that document appears.

6.3 Searching Design Classification

[Japanese Design Classification Search]

This section explains how to search for Japanese design classifications. The following method can be used to search for design classifications.

- "Searching Design Classifications by Keyword" (P.134)
- "Searching Design Classifications by Classification Code" (P.138)

Searching Design Classifications by Keyword

This section explains how to search Japanese design classifications and D-terms using keywords.

"Japanese Design Classification" (P.189), "D-term" (P.186)

Operation Example

Search Japanese design classifications for "かばん" or "バッグ".

1. Select "Designs" - "Japanese design classification Search" from the global navigation.

⇒ The Japanese design classification Search screen appears.

The screenshot shows the 'Japanese design classification Search' page. The navigation bar at the top has tabs for 'Patents/Utility Models', 'Designs', 'Trademark', and 'Trials & Appeals'. The 'Designs' tab is selected, and a dropdown menu is open, showing options: 'Design Number Search', 'Design Search', 'Japanese design classification Search' (highlighted with a red dashed box and labeled 1.), and 'Graphic Image Design Search (External Link)'. Below the navigation, the page title is 'Japanese design classification Search'. There is a search bar with the text 'かばん バッグ' (kaban baggu) and a 'Search' button (labeled 2.). Below the search bar, there are two tabs: 'Search by Classification' and 'Search by Keyword' (labeled 3.). The 'Search by Keyword' tab is selected. Below the tabs, there is a 'Keyword' field with the text 'かばん バッグ' and an 'AND' button. Below that, there is a 'Search range (classification)' field with the text 'Ex: G2-2100'. At the bottom, there is a 'Search' button (labeled 4.) and a 'Clear' button.

2. Select the "Search by Keyword" tab.

3. Enter the search criteria.

In this example, enter the following criteria.

- Enter "かばん バッグ" in "Keyword".

An OR search can be made by separating multiple search terms with a space.

4. Click the "Search" button.

⇒ The Search Result List screen appears with the text corresponding to hits highlighted.

▶ Tip

What is the "Japanese design classification"?

- A classification primarily concerned with the concept of the intended use of an article.
- All documents having a filing date (or priority date, or in the case of design publication materials the publication date) on or after January 1, Heisei 17 (2005) are given a single classification.
- Classifications are composed of groups, large classifications, small classifications, and image design classifications.
- Image design classifications are given only to designs containing an image.

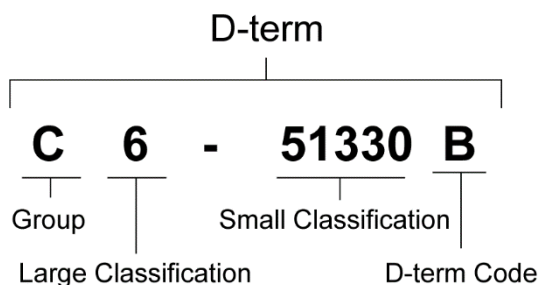

Japanese Design Classification

▶ Tip

What is D-term?

- Provides subdivisions for current Japanese design classifications in terms of shapes, patterns, etc.
- Given to documents having a filing date (or priority date, or in the case of design publication materials the publication date) on or after January 1, Heisei 17 (2005).
- D-terms may or may not be given to documents depending on the content of the documents. Some documents are given multiple D-terms.
- D-terms are composed of the groups, large classifications, and small classifications of the current Japanese design classification, and D-term codes which expand the aforementioned into lower rankings.

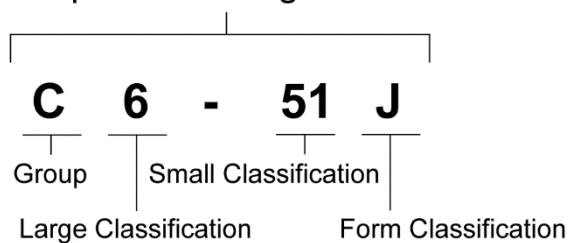

▶ **Tip**

What is the "Former Japanese design classification"?

- A classification primarily concerned with the concept of the intended use of an article.
- Documents having a filing date (or priority date, or in the case of design publication materials the publication date) on or before December 31, Heisei 16 (2004) are given a single classification.
- Classifications are composed of groups, large classifications, small classifications, and form classifications.

Former Japanese Design Classification

Former Japanese Design Classification

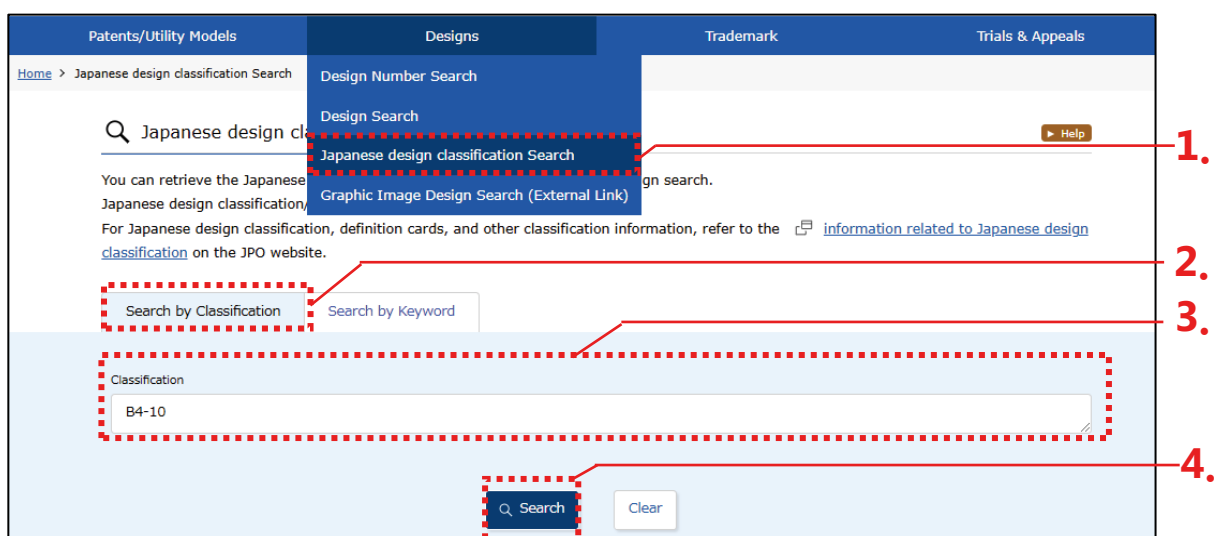

Searching Design Classifications by Classification Code

This section explains how to search Japanese design classifications and D-terms using classification codes.

Operation Example

Search for Japanese design classification "B4-10".

1. Select "Designs" - "Japanese design classification Search" from the global navigation.
⇒ The Japanese design classification Search screen appears.

2. Confirm that the "Search by Classification" tab is displayed.
3. Enter the search criteria.
In this example, enter the following criteria.
 - In "Classification", enter "B4-10".

4. Click the "Search" button.

⇒ * The retrieved classification is displayed with highlighting. The classification code information can be confirmed.

Design searches can be made using the retrieved classification. See the following hint for details.

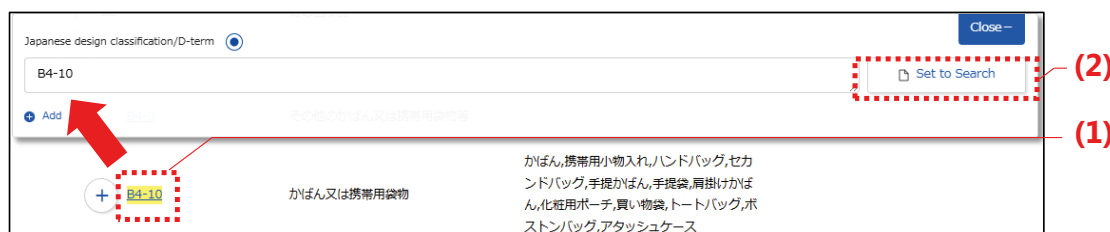

Tip

Searching designs using a retrieved design classification

This section gives an example of searching for designs by setting the design classification "B4-10" from the search results of "Searching Design Classifications by Classification Code" (P.138).

- (1) Select the link (Japanese design classification or D-term) for the classification of designs you wish to search for from the tree displayed in the "Search by Classification" tab.

The selected classification is automatically entered in the "Japanese design classification/D-term" field.

- (2) Click the "Set to Search" button. The Design Search screen appears. All classifications entered in the "Japanese design classification/D-term" field are automatically set as "Search keywords" in the Design Search screen (with "Japanese design classification/D-term" as the "Search item").

The screenshot shows the 'Design Search' interface. At the top, there is a search bar with a magnifying glass icon and the text 'Design Search'. Below the search bar, there is a paragraph of text: 'You can retrieve domestic gazettes, publication materials, and foreign gazettes using Japanese design classification/D-term, etc. Select the search items and enter search keywords. (An OR search is performed when you separate search keywords with a space.) Note that the retrievable coverage varies by search item. (Click here for details.) For classification information, refer to Design Classification Search.' Below this text, there is a section with two buttons: 'Load Search Condition' and 'Search Tips'. Below these buttons, there is a section titled 'Document types' with three checkboxes: 'Domestic Gazette' (checked), 'Publication Material', and 'Foreign Gazette'. Below the 'Document types' section, there is a section titled 'Search keywords' which is highlighted by a red dashed box. This section contains a table with two columns: 'Search item' and 'Keyword'. The first row has 'Japanese design classification/D-...' in the 'Search item' column and 'B4-10' in the 'Keyword' column. To the right of the table, there is a button labeled 'Old Version' with a question mark icon. At the bottom left of the 'Search keywords' section, there is an 'Add' button.

Design Search

You can retrieve domestic gazettes, publication materials, and foreign gazettes using Japanese design classification/D-term, etc. Select the search items and enter search keywords. (An OR search is performed when you separate search keywords with a space.) Note that the retrievable coverage varies by search item. (Click here for details.) For classification information, refer to Design Classification Search.

7.1 Searching Trademarks by Document Number [Trademark Number Search]

This section explains how to search trademark publications by entering document numbers such as application numbers.

Operation Example

Search for trademark registration number "5052317".

1. Select "Trademark" - "Trademark Number Search" from the global navigation.

⇒ The Trademark Number Search screen appears.

The screenshot shows the 'Trademark Number Search' interface. A red dotted box labeled '1.' highlights the 'Trademark' menu in the top navigation bar, which is open to show 'Trademark Number Search' as the selected option. Another red dotted box labeled '2.' encompasses the main search form area, including the 'Search target type' (set to 'Publication'), 'Input type' (set to 'Number'), 'Number type' (set to 'Registration number'), and the 'Number' input field containing '5052317'. A third red dotted box labeled '3.' points to the 'Search' button at the bottom of the form.

2. Enter the search criteria.

In this example, enter the following criteria.

- In "Search target type", select "Publication".
- In "Input type", select "Number".
- In "Number type", select "Registration number".
- In "Number", enter "5052317".

3. Click the "Search" button.

⇒ The Search Result List screen appears.

7.2 Searching Trademarks by Keyword [Trademark Search]

This section explains how to search for applications/registration information or publications using keywords such as trademark names and pronunciations.

The following describes search criteria that can be used to search.

- ["Searching by Trademark Name" \(P.145\)](#)
- ["Searching by Pronunciation" \(P.150\)](#)

Searching by Trademark Name

This section explains how to search for applications/registration information by trademark name.

Operation Example

Find whether "J-PlatPat" has been applied for or registered as a trademark for printed materials.

1. Select "Trademark" - "Trademark Search" from the global navigation.

⇒ The Trademark Search screen appears.

The screenshot shows the J-PlatPat Trademark Search interface. The global navigation bar at the top includes 'Patents/Utility Models', 'Designs', 'Trademark', and 'Trials & Appeals'. The 'Trademark' menu is expanded, showing options like 'Trademark Number Search', 'Trademark Search', 'Japanese Well-known Trademark Search', 'Unregistered Mark Search', 'Table of the CFE Marks', and 'Goods/Service Name Search'. The 'Trademark Search' option is highlighted with a red dashed box and labeled '1.'.

The main search area is titled 'Trademark Search' and includes a search bar and a 'Search Tips' button. Below this, there is a section for 'Search target type' with radio buttons for 'Information on application/registration' (selected) and 'Publication'. The 'Information on application/registration' section is expanded, showing three search criteria: 'Trademark (mark)', 'Goods/services', and 'Other search keywords'. Each criterion has a 'Search item' dropdown and a 'Keyword' input field. The 'Trademark (mark)' section includes 'Delete' and 'AND' buttons. The 'Goods/services' section includes an 'Add' button. The 'Other search keywords' section includes 'Add', 'Partial match' (selected), and 'Exact match' radio buttons. Below these sections are 'Exclusion keywords' and 'Search options' sections, each with an 'Open' button. The 'Search options' section shows 'Options : Not specified'. The 'Search' button at the bottom is highlighted with a red dashed box and labeled '3.'.

2. Enter the search criteria.

In this example, enter the following criteria.

- In "Search target type", select "Information on application/registration".
- In the "Search item" in "Trademark (mark)", select "Trademark (for search)".
- Enter "J-PlatPat" in "Keyword" for "Trademark (mark)".
- In the "Search item" for "Goods/services", select "Similar group code (reference)".
- In "Keyword" for "Goods/services", enter the similar group code for printed materials, "26A01".

For how to search similar group codes, see ["7.6 Searching Designated Goods/Service Names, Classes, and Similar Group Codes \[Goods/Service Name Search\]"](#) (P.165).

"Trademark (for search)" (P.190), "Similar Group Code" (P.190)

3. Click the "Search" button.

⇒ The Search Result List (Application/Registration Information) screen appears.

3.

4.

No.	Application number/ Registration number/ International registration number	Specimen of trademark	Trademark (for search)	Pronunciation criteria	Pronunciation (reference information)	Class	Applicant/Right holder/Holder	Filing date/Date of the international registration (date of subsequent designation)	Registration date	Status	Options

⇒ The "Information on application/registration of trademarks" screen appears.

Information on application/registration of trademarks [Help](#)

Tip

What is a "status"?

"Status" refers to the current state (such as application pending or registered) for each project, shared by TM5 (the Japan Patent Office, the United States Patent and Trademark Office, the European Union Intellectual Property Office, the Korean Ministry of Intellectual Property, and the China National Intellectual Property Administration).

The statuses indicated for Japan include 15 types for domestic trademarks and 12 types for international trademarks. The following status icons and status notations are used, for example.

Status	Meaning
 LIVE-APPLICATION-Awaiting Examination	The government has received the trademark application but has not delivered it to the examiner.
 LIVE-REGISTRATION-Issued and Active	The trademark application has been registered by the government.
 DEAD-REGISTRATION-Expired	The trademark application was registered, but the registration was canceled due to improper rights maintenance.

See Help for other statuses and their meanings.

Tip

About page feeding of the information on application/registration of trademarks display screen

In the information on application/registration of trademarks display screen, page feeding is possible within the range of 12000 results by clicking on the "Next document" button.

(In the Publication Display screen for trademarks and Document Display screen for designs, page feeding is possible within the range of 30000 results.)

When the search results exceed an upper limit of 12000, the following message may be displayed.

< Previous document 1 / 12001 / 12000 [Display](#) [Next document](#) >

To display the documents No.12001 to 30000, return to the search result list and click on the link of the relevant document number.

To display the document in the range indicated in the message, go back to the search results, and click the number link of the document you want to display.

Searching by Pronunciation

This section explains how to search by the reading (pronunciation) of a trademark containing text.

"Pronunciation" (P.190)

Operation Example

Find whether a trademark having a reading similar to "プラットパット" has been applied for or registered as a trademark for printed materials.

1. Select "Trademark" - "Trademark Search" from the global navigation.

⇒ The Trademark Search screen appears.

The screenshot shows the J-PlatPat Trademark Search interface. The top navigation bar includes 'Patents/Utility Models', 'Designs', 'Trademark', and 'Trials & Appeals'. The 'Trademark' tab is selected, and a dropdown menu is open, showing options: 'Trademark Number Search', 'Trademark Search' (highlighted with a red dashed box and labeled '1.'), 'Japanese Well-known Trademark Search', 'Unregistered Mark Search', 'Table of the CFE Marks', and 'Goods/Service Name Search'.

The main content area is titled 'Trademark Search' and contains instructions and links. Below this, there is a section for 'Search target type' with radio buttons for 'Information on application/registration' (selected) and 'Publication'. The 'Search item' dropdown is set to 'Pronunciation (search by similarity)' and the 'Keyword' field contains 'プラットパット'.

Below the 'Search item' section, there is a 'Goods/services' section with a 'Search item' dropdown set to 'Similar group code (reference)' and a 'Keyword' field containing '26A01'.

Below the 'Goods/services' section, there is an 'Other search keywords' section with a 'Search item' dropdown set to 'Applicant/right holder/Holder' and a 'Keyword' field containing 'Ex: 出願太郎'.

Below the 'Other search keywords' section, there is an 'Exclusion keywords' section with a text input field and an 'Open' button.

Below the 'Exclusion keywords' section, there is a 'Search options' section with an 'Open' button.

At the bottom, there is a 'Search' button (labeled '3.'), a 'Clear' button, and a 'Save Search Condition' button.

2. Enter the search criteria.

In this example, enter the following criteria.

- In "Search target type", select "Information on application/registration".
- In the "Search item" in "Trademark (mark)", select "Pronunciation (search by similarity)".
- In "Keyword" for "Trademark (mark)", enter "プラットパット".
- In the "Search item" for "Goods/services", select "Similar group code (reference)".
- In "Keyword" for "Goods/services", enter the similar group code for printed materials, "26A01".

For how to search similar group codes, see ["7.6 Searching Designated Goods/Service Names, Classes, and Similar Group Codes \[Goods/Service Name Search\]"](#) (P.165).

3. Click the "Search" button.

⇒ The Search Result List (Application/Registration Information) screen appears.

► Tip

Searching trademarks by pronunciation

Trademark searches by pronunciation include a "Simple text search", which searches for an exact matching pronunciation, and a "Search by similarity", which searches for pronunciations having similar sounds or qualities.

For details on entering text used when searching trademarks by pronunciation, click the "Notes on Use" link at the top of the Trademark Search screen.

 Trademark Search
 ► Help

You can search for application/registration information, or publications after year 2000 by the trademark name, pronunciation, and other options. Select the search items and input search keywords.

(An OR search is performed when you separate search keywords with a space.)

Also, when searching by class, trademarks in other classes related to "similar group codes" will also be displayed in the results.)

Note that if the search target type is publication, the search target is limited to only some publications.

[Reference Information]

- Materials about classes of goods/services or similar group codes -> [Goods/Service Name Search](#), [International Classification Table of Goods and Services](#), [Examination Guidelines for Similar Goods and Services](#)
- Notes on "Pronunciation (Search by Similarity)", "Pronunciation (Simple Text Search)", and "Trademark (for search)" -> [Notes on Use](#)
- Materials related to figure trademark search -> [Manual for searching figure trademarks using Global Brand Database \(GBD\)](#) [Image Search](#), [GBD Image Search](#)

- Simple text search

Although this search retrieves perfect matches, partial matches can also be searched for by using wildcards (?).

For wildcards, see "3.3 Wildcard" (P.39).

- Search by similarity

This search retrieves pronunciations similar to the search keywords. Criteria for determining similarity are indicated by numbers in the "Pronunciation criteria" column of the Search Result List. For details on the pronunciation criteria, click the "Notes on Use" link at the top of the Trademark Search screen.

7.3 Searching Well-known Trademarks [Japanese Well-known Trademark Search]

This section explains how to use keywords such as trademark names or right holders to search trademarks registered as defensive marks and registered trademarks acknowledged as being well-known trademarks through opposing decisions, trials & appeals, or judgments.

"Well-known Trademark" (P.191), "Defensive Mark" (P.187)

Operation Example

Search for a well-known trademark having a reading of "guriko".

1. Select "Trademark" - "Japanese Well-known Trademark Search" from the global navigation.
⇒ The Japanese Well-known Trademark Search screen appears.

2. Enter the search criteria.
In this example, enter the following criteria.

- In the "Search item" field of "Search keywords", select "Reading (katakana)".
- In the "Keyword" field of "Search keywords", enter "guriko".

3. Click the "Search" button.

⇒ The Search Result List screen appears.

3.

Search Result List

4.

4. Select the link you wish to view in the "Registration number/international registration number" column.

⇒ The Japanese Well-known Trademark screen appears.

The screenshot shows the "Japanese Well-known Trademark" search results page. At the top, there is a search bar with the text "Japanese Well-known Trademark" and a "Help" button. Below the search bar, there are navigation links: "< Previous document", "4 of 6", "Display", and "Next document >". The main content area displays the registration number "Reg.No.2671735". On the left side, there is a table with the following information:

Registration number	: 2671735
Classes of goods and services	:
International Classification	30
Right holder	: Ezaki Glico Co.,Ltd. Osaka-shi, Osaka
Trademark (for search)	: guriko
Reading (katakana)	: guriko

Below the table, it states: "This trademark is registered as a defensive mark." On the right side, there is a large image of the trademark "グリコ" (Guriko) in bold black Japanese characters. Above the image, there is a "1" and an "Enlarge and Rotate" button. A "- Collapse" button is located at the top right of the image area.

Tip

Displaying a list of well-known trademarks

To display all well-known trademarks registered with J-PlatPat, click the "List All" button on the lower right in the Japanese Well-known Trademark Search screen.

The screenshot shows the "Japanese Well-known Trademark Search" screen. At the top, there is a search bar with the text "Japanese Well-known Trademark Search" and a "Help" button. Below the search bar, there is a paragraph of text: "You can retrieve trademarks registered as defensive marks and registered trademarks certified as well-known trademarks through opposing decisions, trials, or judgment from, for example, trademark names and document numbers. Note that search results are not equivalent to trademark publications. For cautions regarding the use of 'Japanese Well-known Trademark Search', refer to [Notes on use](#)." Below this text, there is a search form with the following fields:

- Search keywords**: A text input field.
- Search item**: A dropdown menu with "Trademark (for search)" selected.
- Keyword**: A text input field with the example text "Ex: 特許庁 ?特許? 特許?".
- Add**: A button with a plus icon.
- Exclusion keywords**: A text input field with the placeholder text "Specify a keyword to exclude from the search result."
- Open**: A button with a plus icon.
- Search for figure trademark**: A checkbox.
- Search**: A button with a magnifying glass icon.
- Clear**: A button.
- List All**: A button with a magnifying glass icon, highlighted with a red dashed border.

7.4 Searching Marks That Cannot Be Registered [Unregistered Mark Search]

This section explains how to search for marks that cannot be registered under the Trademark Act, using keywords such as pronunciations or document numbers.

"Unregistered Mark" (P.191), "Pronunciation" (P.190)

Operation Example

Find whether or not the pronunciation "ボルドー" is an unregistered mark.

1. Select "Trademark" - "Unregistered Mark Search" from the global navigation.

⇒ The Unregistered Mark Search screen appears.

The screenshot shows the 'Unregistered Mark Search' interface. A red dashed box highlights the search input area, and three red numbers with arrows indicate the following steps:

1. Select "Unregistered Mark Search" from the global navigation menu (indicated by a red arrow pointing to the menu item).
2. Enter search keywords in the 'Search keywords' section (indicated by a red arrow pointing to the 'Keyword' input field containing 'ボルドー').
3. Click the 'Search' button (indicated by a red arrow pointing to the 'Search' button).

The interface includes the following elements:

- Global navigation: Patents/Utility Models, Designs, Trademark, Trials & Appeals.
- Breadcrumbs: Home > Unregistered Mark Search.
- Search bar: Unregistered Mark Search.
- Help button: Help.
- Search target type: All (selected), WTO Source of Origin, Marks Designated by Minister.
- Search keywords: Search item (Pronunciation (simple text search)), Keyword (ボルドー).
- Exclusion keywords: Specify a keyword to exclude from the search result. Open +.
- Date options: Date of publication (designation)... Ex: 20180401 to Ex: 20180501.
- Buttons: Search, Clear.
- Footer: List all (WTO source of origin), List all (marks designated by minister).

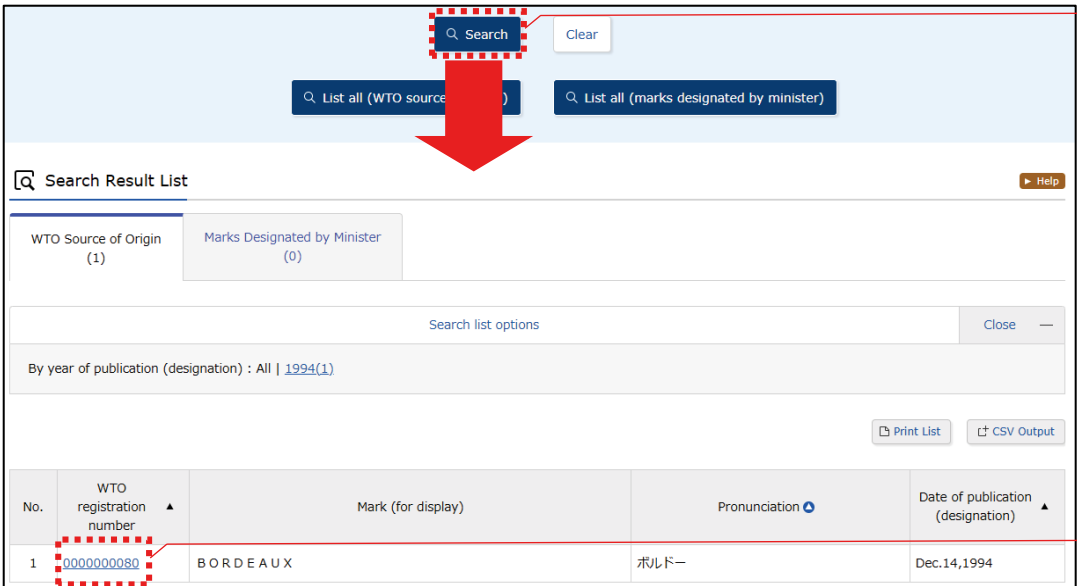

2. Enter the search criteria.

In this example, enter the following criteria.

- In "Search target type", select "All".
- In the "Search item" field of "Search keywords", select "Pronunciation (simple text search)".
- In the "Keyword" field of "Search keywords", enter "ボルドー".

3. Click the "Search" button.

⇒ The Search Result List screen appears.

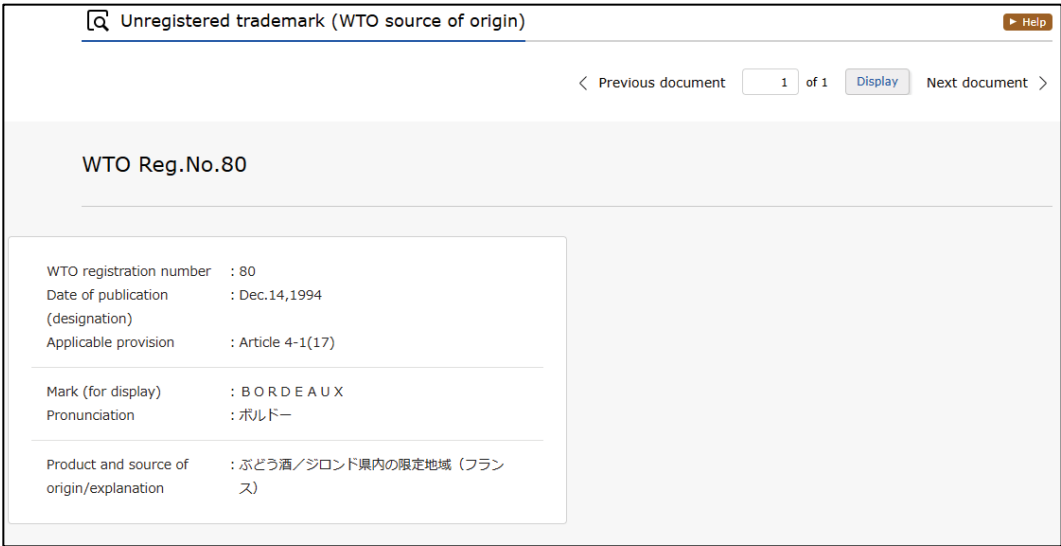

3.

4.

4. Select the link of the registration number you wish to view in the "WTO registration number" column.

⇒ The "Unregistered trademark (WTO source of origin)" screen appears.

Unregistered trademark (WTO source of origin)

WTO Reg.No.80

WTO registration number	: 80
Date of publication (designation)	: Dec.14,1994
Applicable provision	: Article 4-1(17)
Mark (for display)	: B O R D E A U X
Pronunciation	: ボルドー
Product and source of origin/explanation	: ぶどう酒／ジロンド県内の限定地域（フランス）

Tip

Displaying a list of unregistered marks

To display all the unregistered marks registered with J-PlatPat (WTO source of origin or marks designated by minister), click the "List all (WTO source of origin)" button or the "List all (marks designated by minister)" button at the bottom in the Unregistered Mark Search screen.

Unregistered Mark Search

You can retrieve (part of) marks that cannot be registered under Trademark Law, by pronunciation, document number, or other options. Note that search results are not equivalent to trademark publications.

7.5 Searching Classification of Figures or Other Elements of Marks [Table of the CFE Marks]

This section explains how to search for classifications of figures or other elements of marks.

["Classification of Figures, etc." \(P.186\)](#)

The following method can be used to search classifications of figures or other elements of marks.

- ["Searching Classification by Using a Tree in Table of the CFE Marks" \(P.159\)](#)
- ["Searching Classification of Figures or Other Elements of Marks by Keyword" \(P.163\)](#)

Searching Classification by Using a Tree in Table of the CFE Marks

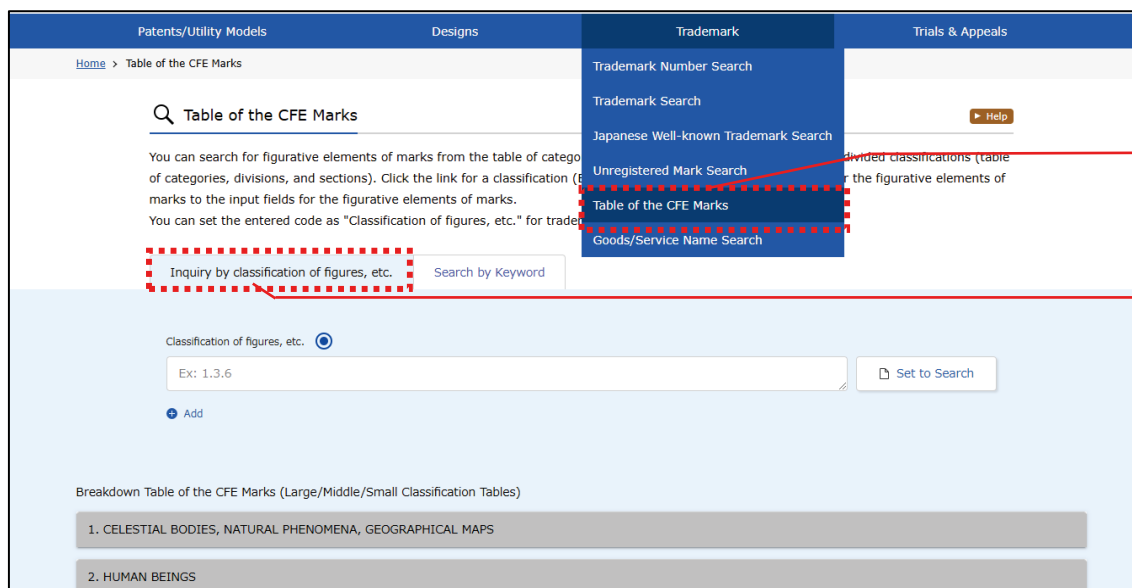

This section explains how to search by selecting a classification from the tree of the Breakdown Tables of the CFE Marks (Large/Middle/Small Classification Tables).

Operation Example

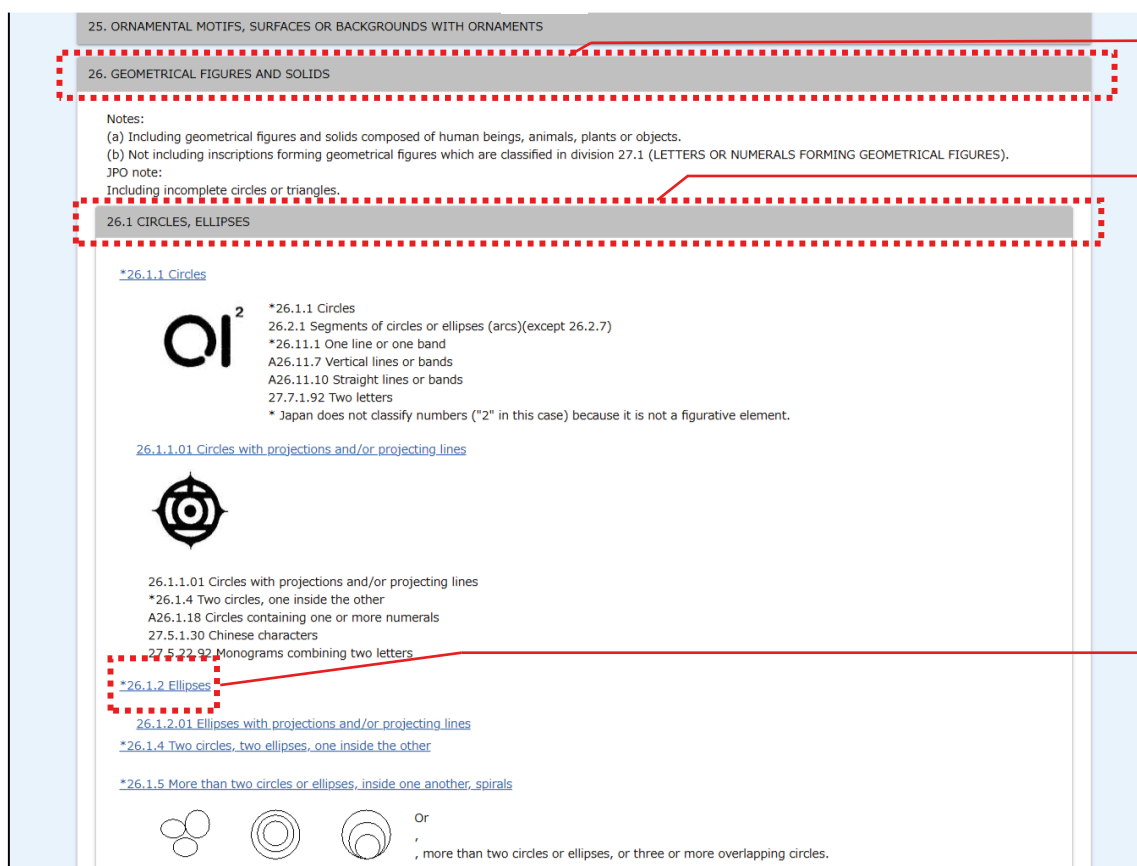

Search the classification of "ellipse".

1. Select "Trademark" - "Table of the CFE Marks" from the global navigation.

⇒ The Table of the CFE Marks screen appears.

⋮ Omitted

- 2.** Confirm that the "Inquiry by classification of figures, etc." tab is displayed.
- 3.** Select the large classification to search.
Since the search is for an ellipse, select "26 GEOMETRICAL FIGURES AND SOLIDS" in the Breakdown Tables of the CFE Marks (Large/Middle/Small Classification Tables).
⇒ The classifications in "26 GEOMETRICAL FIGURES AND SOLIDS" are expanded.
- 4.** Select the middle classification to search.
Since the search is for an ellipse, select "26.1 CIRCLES, ELLIPSES" in the Breakdown Tables of the CFE Marks (Large/Middle/Small Classification Tables).
⇒ The classifications in "26.1 CIRCLES, ELLIPSES" are expanded.
- 5.** Select the small classification to search.
The classification for "ellipse" can be identified as "26.1.2".
Trademark searches can be made using the retrieved classification. See the following hint for details.

Tip

Searching trademarks using a retrieved classification of figures or other elements of marks

This section explains how to search for trademarks by setting the retrieved classification of figures or other elements of marks. ("26.1.2" Ellipses).

- (1) Select a link for the classification searched for in the Table of the CFE Marks screen.

The selected classification is automatically entered in the "Classification of figures, etc." field.

- (2) Click the "Set to Search" button.

The Trademark Search screen appears.

All classifications entered in the "Classification of figures, etc." field are automatically set as "Trademark (mark)" in the Trademark Search screen (with "Classification of figures, etc." as the "Search item").

For how to search using the Trademark Search screen, see ["7.2 Searching Trademarks by Keyword \[Trademark Search\]"](#) (P.145).

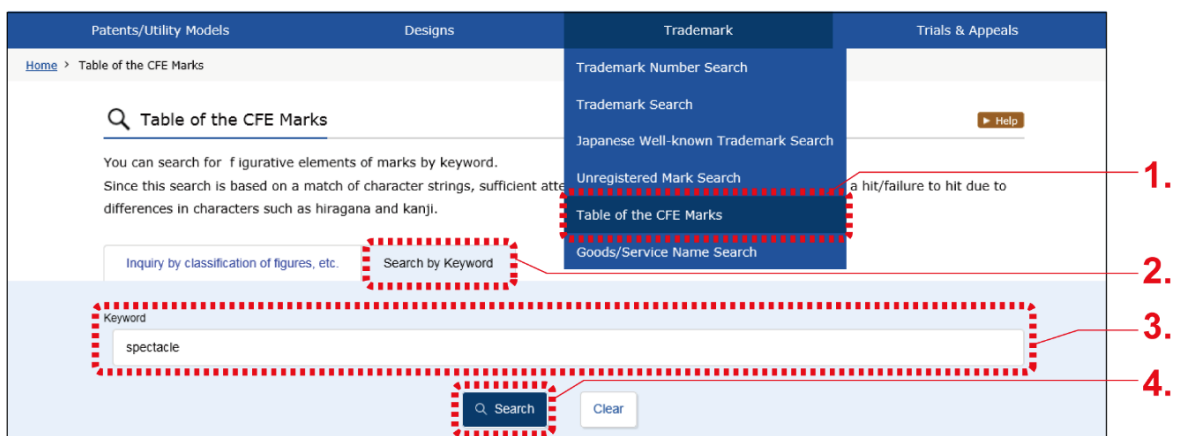

Searching Classification of Figures or Other Elements of Marks by Keyword

This section explains how to search the classification of figures or other elements of marks using keywords.

Operation Example

Search the classification of "spectacle".

1. Select "Trademark" - "Table of the CFE Marks" from the global navigation.
⇒ The Table of the CFE Marks screen appears.

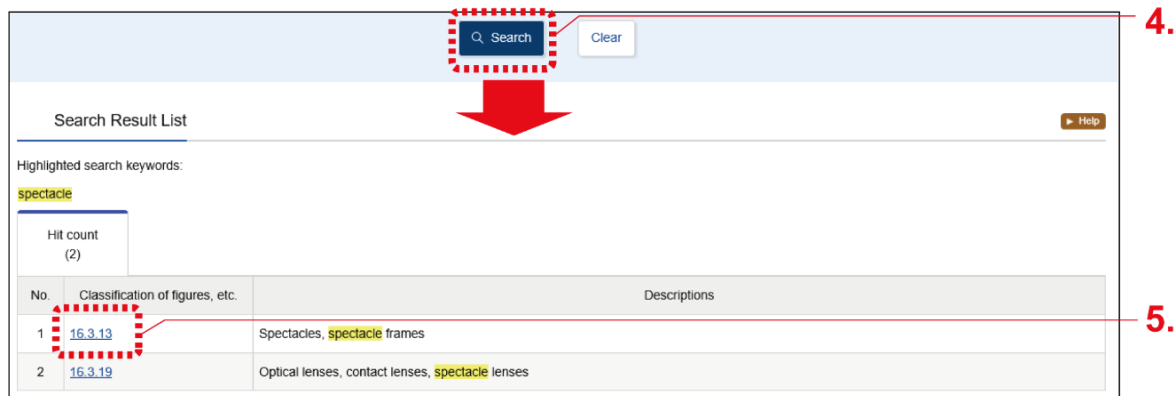

2. Select the "Search by Keyword" tab.
3. Enter the keyword.
In this example, enter the following criteria.
 - Enter "spectacle" in "Keyword".

4. Click the "Search" button.

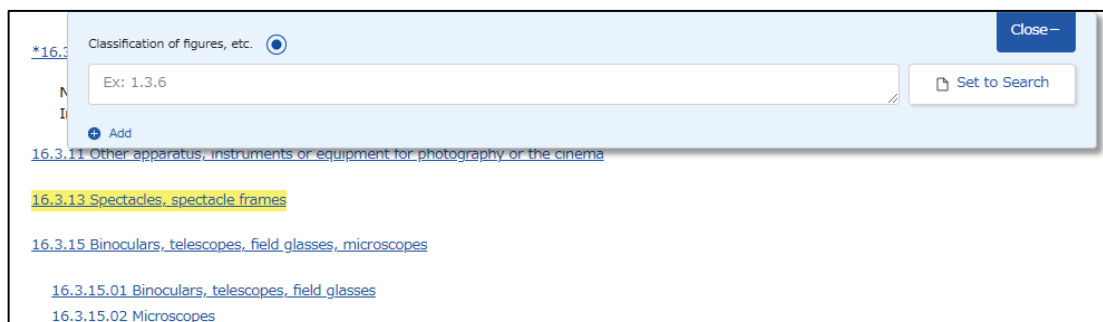

⇒ The Search Result List screen appears.

If your desired classification is not displayed in the search results, try using a different term. For example, if "hat" returns no hits, try searching with similar terms, such as "cap" or "headwear".

5. Select a link in the "Classification of figures, etc." column.

⇒ The screen switches to a tree in the "Inquiry by classification of figures, etc." tab with the selected classification highlighted.

Trademark searches can be made using the retrieved classification.

For more information, refer to "Searching trademarks using a retrieved classification of figures or other elements of marks" (P.162).

7.6 Searching Designated Goods/Service Names, Classes, and Similar Group Codes [Goods/Service Name Search]

This section explains how to search designated goods/service names, classes, and similar group codes by goods/service name.

"Class" (P.186), "Similar Group Code" (P.190)

Operation Example

Search for a goods/service name containing "印刷物".

1. Select "Trademark" - "Goods/Service Name Search" from the global navigation.

⇒ The Goods/Service Name Search screen appears.

The screenshot shows the J-PlatPat interface with the 'Trademark' tab selected. A dropdown menu is open, showing 'Goods/Service Name Search' as the selected option, indicated by a red dashed box and a red arrow labeled '1.'. Below the dropdown, the main search form is visible, outlined by a red dashed box and a red arrow labeled '2.'. The form includes sections for 'Edition of international classification (term)', 'Data type', 'Language to use', 'Search keywords', 'Goods/service name', 'Class', 'Similar group code (reference)', 'Exclusion keywords', and a 'Search' button at the bottom, which is also highlighted by a red dashed box and a red arrow labeled '3.'. The 'Search' button is a blue button with a magnifying glass icon and the text 'Search'.

Similar group code (reference)
Ex: 29A01 29B? [Set to Search](#)

< Notes >
If you adopt an indication of "Goods/service name (English)" on the list of goods and services for filing a foreign application (including Madrid protocol via WIPO), the wording might not be accepted or might be required to be changed, depending on the practices of the office you apply for. So, please note that this English indication should be used only as a reference.
As a general rule, the data of similar group codes typed as "N: International Classification Table of Goods and Services (Nice Classification)" and "G: Examination Guidelines for Similar Goods and Services" are published in accordance with the data of corresponding version of "Examination Guidelines for Similar Goods and Services". Please note that the similar group codes may have been changed at the time of examination due to the changes of practices after the above Guidelines were published.
Goods and services with a data type of "F" cannot be accepted by the JPO. **Since the designation of such goods and services can be a ground for refusal**, please refer to the information at the following link and the search results, and consider making changes to the indication.
[List of goods/service names that cannot be accepted \(Excel\)](#)

Hit count (2)

No.	Class	Data type	Application number/international registration number	Goods/service name (Japanese)	Goods/service name (English)	Similar group code (reference)
1	16	G N M	-	印刷物	printed matter	26A01
2	35	G M	-	印刷物の小売又は卸売の業務において行われる顧客に対する便益の提供	retail services or wholesale services for printed matter	26A01 35K13

 Tip**About the database of the Data types of Goods/Services.**

J-PlatPat provides the five data types of Goods/Services, which are commonly accepted as an example. Here are the descriptions below.

- **G** : Examination Guidelines for Similar Goods and Service
The display of Goods/Services listed in the Examination Guidelines for Similar Goods and Services by the Japan Patent Office
- **N** : International Classification Table of Goods and Services (Nice Classification)
The display of Goods/Services based on the International Classification of Goods and Services (Nice Classification)
- **T** : TM5 ID List
The display of Goods/Services in English is accepted by JPO, USPTO, EUIPO, CNIPA, and MOIPA (TM5)
- **E** : Goods/Services name (only Japanese or English) accepted by examination
These Goods/Services are newly adopted by examination and are thought to be informative for applicants.
- **M** : WIPO Madrid Goods and Services Manager (MGS)
These Goods/Services are accepted by the WIPO and collected in a database (WIPO Madrid Goods and Services Manager).
- **F** : Goods/Service names that cannot be accepted due to refusal under Article 6 of the Trademark Act

Tip

Searching trademarks using retrieved classes or similar group codes

This section explains how to search for trademarks by setting a retrieved similar group code (26A01).

- (1) Select the link in the "Similar group code (reference)" column that displays the codes retrieved in "7.6 Searching Designated Goods/Service Names, Classes, and Similar Group Codes [Goods/Service Name Search]" (P.165).

In this example, select the link for "26A01".

Search Result List

Class
Ex: 03 5 08 27 30 42 Set to Search

Similar group code (reference)
26A01 Set to Search (2)

< Notes >
If you adopt an indication of goods/service name (English)* on the list of goods and services for filing a foreign application (including Madrid protocol via WIPO), the wording might not be accepted. It might be required to be changed, depending on the practices of the office you apply for. So, please note that this English indication should be used only as a reference.
As a general rule, the data of similar group codes is based on "N: International Classification Table of Goods and Services (Nice Classification)" and "G: Examination Guidelines for Similar Goods and Services" are published in accordance with the data of corresponding version of "Examination Guidelines for Similar Goods and Services". Please note that the similar group codes may have been changed at the time of examination due to the changes of practices after the above Guidelines were published.
Goods and services with a data type of "F" cannot be accepted by the JPPO. Please note the designation of such goods and services can be a ground for refusal, please refer to the information at the following link and the search results, and consider making changes to the indication.

Trial & appeals

8

This chapter explains how to search for trials and appeals information.
Please refer to the help for explanations of the items on the screen.

8.1 Searching Trial Decisions and Judgment Gazettes [Trial Decision Search].. 172

8.1 Searching Trial Decisions and Judgment Gazettes [Trial Decision Search]

This section explains how to search various documents related to trial decisions (appeal against examiner's decision, inter partes trial/appeal), opposition decision documents, and judgment gazettes.

The following method can be used for trial decision searches.

- ["Searching Trial Decisions and Judgment Gazettes by Keyword" \(P.172\)](#)
- ["Searching Trial Decisions and Judgment Gazettes by Appeal or Trial Number" \(P.176\)](#)

Searching Trial Decisions and Judgment Gazettes by Keyword

This section explains how to search trial decisions and judgment gazettes using keywords.

Operation Example

Search ex parte trial/appeals in which "国立研究開発法人産業技術総合研究所" is the demandant.

1. From the global navigation, select "Trials & Appeals" - "Trial Decision Search".

⇒ The Trial Decision Search screen appears.

The screenshot shows the 'Trial Decision Search' interface. At the top, the navigation bar includes 'Patents/Utility Models', 'Designs', 'Trademark', and 'Trials & Appeals'. The 'Trials & Appeals' section is active, and 'Trial Decision Search' is highlighted. Below the navigation bar, the page title is 'Trial Decision Search'. A search bar with a magnifying glass icon and the text 'Trial Decision Search' is present. To the right of the search bar is a 'Help' button. Below the search bar, there is a paragraph explaining the search capabilities: 'You can search various decision-related documents (ex parte appeals, inter partes trial/appeal), documents related to decision on opposition, judgment gazettes. Select the search items and input search keywords. (An OR search is performed when you separate search keywords with a space.) For more information about case record symbols, see [Record symbol list](#). In inputting the action filing number, for example, input "H●●-▲▲▲▲▲▲" for "平成●●年(行ケ)第▲▲▲▲▲▲号".'

The main search form is enclosed in a red dashed box. It contains the following sections:

- Input type:** Radio buttons for 'Input keyword' (selected) and 'Number'.
- Load Search Condition:** A button with a document icon.
- Document types:** A section with a 'Document types' header and an 'Advanced Settings +' button. It includes checkboxes for 'Ex parte trial/appeal' (checked), 'Opposition', 'Inter partes trial/appeal', and 'Judgment Gazette'.
- Search keywords:** A section with a 'Search item' dropdown menu (set to 'Demandant') and a 'Keyword' input field containing the text '国立研究開発法人産業技術総合研究所'.
- Add:** A button with a plus icon.
- Search options:** A section with a 'Search options' header and an 'Open +' button. It includes a text field with the value 'Options : Not specified'.

At the bottom of the form, there are three buttons: 'Search' (highlighted with a red dashed box and annotation 3), 'Clear', and 'Save Search Condition'.

2. Enter the search criteria.

In this example, enter the following criteria.

- In "Input type", select "Input keyword".
- In "Document types", select "Ex parte trial/appeal".
- In the "Search item" field of "Search keywords", select "Demandant".
- In the "Keyword" field of "Search keywords", enter "国立研究開発法人産業技術総合研究所".

3. Click the "Search" button.

⇒ The Search Result List screen appears.

3.

Tip

What is a trial decision bulletin?

Information regarding inter partes trial/appeal decisions, ex parte trial/appeal decisions, decisions made for oppositions, and the like leading up to the publication of those decisions is called a "trial decision bulletin". Trial decision bulletins can be searched through the Trial Decision Search screen.

Bulletin is displayed in the search result list for documents subject to trial decision bulletins. When the document number link is selected, the trial decision bulletin appears.

Representative patent attorney:

has resulted in the following appeal decision:

Conclusion

The appeal of the case was groundless.

Reason

[1] History of the procedures this application is application on , and in view of the description of the Description whose full text was amended by the Written Amendment on and the corrected Drawings, the invention according to claim 5 was described in Claim 5 of the scope of the claim, and is acknowledged as follows. (Hereinafter, it is called the "present invention".) "

Searching Trial Decisions and Judgment Gazettes by Appeal or Trial Number

This section explains how to search trial decisions and judgment gazettes using appeal or trial numbers.

Operation Example

Search for the appeal or trial number "2017-009341".

1. From the global navigation, select "Trials & Appeals" - "Trial Decision Search".

⇒ The Trial Decision Search screen appears.

The screenshot shows the 'Trial Decision Search' page. A red dashed box labeled '1.' highlights the 'Trial Decision Search' link in the top navigation bar. Another red dashed box labeled '2.' highlights the 'Input type' section, which includes radio buttons for 'Input keyword' and 'Number' (selected). A third red dashed box labeled '3.' highlights the 'Search keywords' section, which includes a 'Search item' dropdown menu (set to 'Appeal or trial number') and a 'Keyword' text input field containing '2017-009341'. Below these fields are 'Search' and 'Clear' buttons.

2. Enter the search criteria.

In this example, enter the following criteria.

- In "Input type", select "Number".
- In the "Search item" field of "Search keywords", select "Appeal or trial number".
- In the "Keyword" field of "Search keywords", enter "2017-009341".

3. Click the "Search" button.

⇒ The Search Result List screen appears.

The Japanese Patent Application No. 2013-205146 "manufacturing method of single crystal diamond" the case of appeal against the examiner's decision of refusal [Heisei 27(2015) April 13 publication of unexamined application and provisional-publication-of-a-patent 2015- 67516 and the number of claims (5)] has resulted in the following appeal decision:
[Conclusion]
The examiner's decision is revoked.
The Invention of the present application shall be granted a patent.
[Reason]
This application is Heisei 25(2013). It is application on September 30 and it is admitted that invention concerning the Claims 1-5 is a thing as the matter described in the Claims 1-5 of the scope of the claim corrected by the Written Amendment as of Heisei 30(2018) January 25 specifies.
And about this application, even if it examines any of the reason for refusal of the examiner's decision, and the reason for refusal from a the body, it shall not refuse for the Reason.
In addition, beyond that, no reasons for refusal were found.
Therefore, the appeal/trial decision shall be made as described in the conclusion.

Appendix

The appendix provides additional reference information for using J-PlatPat.

Appendix A	Direct Entry of Logical Expressions	180
Appendix B	Glossary	186

Appendix A Direct Entry of Logical Expressions

This section explains how to input logical expressions when using the "Logical Expression Input" tab in the Patent/Utility Model Search Screen to input logical expressions directly. Details of entry formats for different search items, search items that can be specified, and so on can be found in Help.

Breaks between Search Keywords and Search Items

Logical expressions are created by specifying multiple search keywords and combining those search keywords with operators. To enter a search keyword directly, enter the search keyword and a structure tag indicating a search item separated by a slash (/).

For details on structure tags indicating search items, see Help.

- When "クラウド" is included in the scope of claims (structure tag "CL")

クラウド/CL

- When a keyword in which an undetermined single character is included between "無電源" and "発光" in the full text (structure tag "TX")

A question mark (?) can be used as a wildcard.

'無電源?発光' /TX

Specifying a Proximity Search

When searching by keywords, a proximity search can also be specified using logical expressions by indicating an interval between two or three keywords.

The interval between keywords can be from 1 to 99 characters. Word order specifications can be entered as C or c for word order and N or n for no word order.

If "Japanese text" is selected in "search target text", the interval number is the number of characters. If "English text" is selected, the interval number is the number of words.

For two keywords, enter the keywords as follows.

- Example of searching full text (structure tag "TX") for items in which no more than five characters are between "無電源" and "発光" (when specifying the word order so that "無電源" is always first and "発光" is always last, enter "C" after the number of characters).

無電源, 5C, 発光 / TX

- Example of searching full text (structure tag "TX") for items in which no more than three characters are between "無電源" and "発光" (when no word order is specified for "無電源" and "発光", enter "N" after the number of characters).

無電源, 3N, 発光 / TX

Specifying a proximity search can also be entered by using the screen of the "Proximity Search Input Support" of the "Selective Input" tab. The entered search criteria on the "Selective Input" tab can also turn into a logical expression. For how to search full text for items in which no more than three characters are between "無電源" and "発光", see the following:

- (1) Select the "Full text" in the "Search item" field of "Search keywords" in the "Selective Input" tab, then click the "Proximity Search" button next to the "Keyword" field.

Patent/Utility Model Search

You can retrieve patent/utility model publications, foreign documents, and non-patent documents by using keywords in bibliographies, abstracts, and claims, as well as classifications (FI/F-terms, IPC), etc.
Enter a document type and a search keyword to search. (An OR search is performed when you separate search keywords with a space.)
For more information about classification information, see [Patent/Utility Model Classification Search \(PMGS\)](#).

Selective Input Logical Expression Input

Load Search Condition Search Tips

Search target text
☒ Japanese text ☐ English text

Document types
☒ Domestic Documents ☒ Foreign Documents ☐ Non-patent document ☐ J-GLOBAL

Advanced Settings +

Search keywords
 Search item: Full text
 Keyword: Ex: 感染を予防
 Proximity Search

- (2) The "Proximity Search Input Support" appears, then specify each item of 1) to 3), and then click the "OK" button.

Proximity search input support

1) Enter keywords for proximity search.

Keyword 1: 無電源
 Keyword 2: 発光

2) Enter the distance (1 to 99) between keywords 1 and 2.
 3 (The unit of distance is expressed in number of characters for Japanese or number of words for English.)

3) Select the order of appearance of keywords 1 and 2.
☐ Search for documents in which keyword 1 appears before keyword 2.
☒ Search for documents regardless of the order of appearance of keyword 1 and keyword 2.

OK

- (3) "無電源,3N,発光" is automatically entered in the "Keyword" field when the "Proximity Search Input Support" closes.

Patent/Utility Model Search

You can retrieve patent/utility model publications, foreign documents, and non-patent documents by using keywords in bibliographies, abstracts, and claims, as well as classifications (FI/F-terms, IPC), etc.
Enter a document type and a search keyword to search. (An OR search is performed when you separate search keywords with a space.)
For more information about classification information, see [Patent/Utility Model Classification Search \(PMGS\)](#).

Selective Input Logical Expression Input

Load Search Condition Search Tips

Search target text
☒ Japanese text ☐ English text

Document types Advanced Settings +
☒ Domestic Documents all ☒ Foreign Documents 1 ☐ Non-patent document ☐ J-GLOBAL

Search keywords
 Search item Full text Keyword 無電源,3N,発光 Proximity Search

For how to turn the entered search criteria on the "Selective Input" tab into a logical expression, see the ["5.4 Saving Search Criteria \(Logical Expression\) and Repeating Patent and Utility Model Search Using Same Search Criteria \[Patent/Utility Model Search\]" \(P.96\)](#)

Usable Operators

Operators that can be used are as follows. All should be entered as half-width characters. If a single logical expression includes multiple operators, operators having a higher priority ranking are given priority.

- Square brackets ([])
Used to change the priority. This comes first in the priority ranking.
Square brackets are used when defining a scope to be searched preferentially within the logical expression. Nesting can be specified for up to three levels.
- Asterisk (*)
Indicates a logical product (AND). This comes second in the priority ranking.
- Plus (+)
Indicates a logical sum (OR). This comes third in the priority ranking.
- Minus (-)
Indicates a logical negation (NOT). This comes third in the priority ranking.

When searching for a document that matches all of the following criteria

- Overview/abstract (AB) contains "クラウド" or "システム"
- Scope of claims (CL) contains "製造方法" or "装飾部品"

- FI is either "B22F1/00A" or "C22F1/00,601"

```
[クラウド/AB+システム/AB]*[製造方法/CL+装飾部品/CL]*[B22F1/00@A/FI  
+C22F1/00,601/FI]
```

When searching for a document that matches all of the following criteria

- FI contains either "B22F1/00A" or "C22F1/00,601"
- Scope of claims (CL) contains "y + z" (full-width characters, including the operator)
- Application number of the priority contains " 'DE19854811.2'/PN "

```
[B22F1/00@A/FI+C22F1/00,601/FI]*[ y + z /CL]*[ 'DE19854811.2' /PN]
```

- Enter operators contained in the set of search keywords using full-width characters.
- Enter a comma (,) before the FI expansion code.
- Enter an "at" sign (@) before the FI volume identification code.

▶ Tip

How to partially omit input when entering logical expressions directly

When entering search keywords having the same type and same aspect in sequence, the input can be partially omitted by using parentheses (). Even if input is omitted using parentheses, the same search results will be returned (as if nothing was omitted).

- Example of partially omitting a full text search tag ("ワイン/TX+ビール/TX")

```
(ワイン+ビール) /TX
```

- Example of partially omitting up to FI main group ("D02H13/06/FI*D02H13/08/FI")

```
D02H13/ (06*08) /FI
```

- Example of partially omitting up to FI subgroup ("A23B4/00,101/FI*A23B4/00,505@A/FI")

```
A23B4/00, (101*505@A) /FI
```

- Example of partially omitting up to FI expansion code ("A23B4/06,501@C/FI*A23B4/06,501@D/FI")

```
A23B4/06, 501@ (C*D) /FI
```

- Example of partially omitting main theme and aspect of F-term (FT) ("2F084EE02/FT+2F084EE03/FT*2F084EE04/FT")

```
2F084EE (02+03*04) /FT
```

Specifying Exclusion Keywords

This section explains how to specify exclusion keywords containing search keywords.

In a "NOT" search using the minus operator (-), a document containing both a search keyword and an exclusion keyword will not be returned as a hit.

Extended NOT searches cannot be used for English text.

- Extended NOT search

Example of searching for words such as "データログ" or "ログデータ", but excluding documents containing only "プログラム"

(for retrieving documents containing both "データログ" and "プログラム")

[ログ,NOT,プログラム/TX]

- NOT search

Example of searching for words such as "データログ" or "ログデータ", but excluding documents containing "プログラム"

(for avoiding documents containing both "データログ" and "プログラム")

[ログ/TX] - [プログラム/TX]

Appendix B Glossary

Terms used in this manual are defined below.

C ---

■ Class

Based on the Nice Classification, which broadly separates designated goods/services by field. There is Class 1 to Class 45, which the applicant designates at the time of filing. All trademarks belong to one of these classes.

■ Classification of Figures, etc.

A classification based on the Vienna Classification, which is widely adopted internationally as a classification for the figurative elements of trademarks, that has been further subdivided specifically for Japan. Supplied by the JPO as a search key for examination. In addition to figurative elements, classifications are provided for sounds (sound marks) and motion (motion marks).

A classification of figurative or other elements of marks is not provided for trademarks including text only.

■ CPC

Abbreviation of "Cooperative Patent Classification". A common classification managed and used jointly by the European Patent Office (EPO) and the United States Patent and Trademark Office (USPTO).

■ CS-term

Terms developed for use in computer software document searches.

D ---

■ D-term

Provides subdivisions for Japanese design classifications in terms of shapes, patterns, and other elements. The filing date (or priority date, or in the case of design publication materials the publication date) is from 2005 or later, are granted the current Japanese design classification. The one from 2004 or earlier is granted the former Japanese design classification. Not all Japanese design classifications are subdivided by D-terms.

■ D-term (VZA/VZB/VZQ)

It is assigned to a design for which registration is being sought for a part of the design.

(VZA/VZB are granted to the documents whose filing date is from May, 2019. VZQ is granted to the documents whose filing date is from April, 2020.)

VZA: Designs that the part subject to design registration and the other parts are drawn identifiably in drawings.

VZB: Designs that some of the views of the outer appearance are not disclosed in drawings.

VZQ: The Designs for a set.

■ Defensive Mark

A system in which a registered trademark widely recognized by consumers is registered as a defensive mark, even for non-similar goods, when there will be confusion as to the trademark's origin.

■ Dossier Information

Information related to the processing and examination of patent applications (patent family applications) filed in various countries around the world.

With this system, dossier information from the five major patent agencies and WIPO-CASE participating agencies (including international PCT applications) can be viewed through the One Portal Dossier (OPD) Search screen.

E

■ English Abstract

An English-text overview of patent document information from various countries.

F

■ F-term

A technical classification code unique to the Japanese Patent Office developed for the purpose of computer-based searches. F-terms are added to documents as search items that describe technical features.

■ F-term Description

A document that provides technical descriptions of F-terms and F-term themes.

■ Facet

A code developed over a predetermined range of IPCs (such as subclasses or a range of multiple groups), from a viewpoint different from the development of IPC classifications. Written using three English letters.

Facets make it possible to search documents from a transverse perspective spanning multiple IPC categories.

■ FI

Abbreviation of "File Index". A technical classification code unique to the Japanese Patent Office, expanded with further detail from IPC subgroups.

■ FI Handbook

A detailed description of FI.

■ Free Word by Examiner

The free word is the useful term that is assigned to Gazettes and is used for searching.

Especially, the free word by the examiner is given to the Gazettes by the examiner and consists of a theme code and a free word.

G

■ Global Brand Database (GBD)

The Global Brand Database (GBD) by WIPO is a database of Trademarks for searching. This can be set in Japanese and searched by Image.

I

■ International Design Classification

A classification established on the basis of the Locarno Agreement, managed and operated by the World Intellectual Property Organization (WIPO) International Bureau.

■ IPC

Abbreviation of "International Patent Classification". This is a classification for international patents. The IPC is a patent classification that can be used in common by countries around the world, and subdivides all technical fields related to inventions in stages.

J

■ J-GLOBAL

An online service, provided by the Japan Science and Technology Agency, through which domestic researchers and scholarly articles can be searched.

<https://jglobal.jst.go.jp/>

■ Japanese Abstract

Japanese-language overviews of foreign-language documents such as U.S. patent specifications (full text).

■ Japanese Design Classification

A classification created with a primary focus on the intended use of articles to the design, using concepts such as functions when necessary. The current Japanese design classification is given to documents whose filing date (or priority date, or in the case of design publication materials the publication date) is 2005 or later, and the former Japanese design classification is given to documents from 2004 or earlier.

■ Journal of Technical Disclosure

This system only gathers data from journals of technical disclosure for which approval for publication has been granted.

As of the end of March 2011, J-PlatPat no longer provides new data from journals of technical disclosure. Existing data from journals of technical disclosure provided thus far remains available.

O

■ One Portal Dossier (OPD)

One Portal Dossier is the system that provides dossier information from the five major patent agencies and WIPO-CASE participating agencies (including international PCT applications) and shows them in easy to read format.

P

■ PAJ

An abbreviation of "Patent Abstracts of Japan". The English abstracts of publications of unexamined patent applications, in which the bibliographies, applicants, and abstracts of publications of unexamined patent applications issued in Japan are translated into English and digitalized according to specifications based on Trilateral Conference agreements.

■ Pronunciation

Natural readings of text elements such as hiragana, katakana, kanji, and alphabets contained in trademarks, written in katakana. Supplied by the JPO as a search key for examination.

Pronunciations are not supplied for trademarks without text elements (trademarks with graphics only).

Pronunciations are reference information for searching and may differ from those of the actually used by the applicant (trademark owner).

In principle, pronunciations will not be changed after registration, except in the case of obvious errors.

■ Publication Material

Examination materials extracted from publications such as journals, catalogs, or new product information posted on company websites, which are stored with bibliographic information such as design classifications and image data of photographs of products.

S

■ Similar Group Code

A code provided by the JPO, as a search key for examination, in accordance with the details of a good/service. Products and services with similar group codes are assumed to be similar to each other.

T

■ Trademark (for search)

A text string used in a trademark and provided for search purposes by the JPO as a search key for examination.

Trademarks (for search) are not supplied for trademarks with no text elements (trademarks with graphics only).

Trademark (for search) is reference information for searching and may differ from the character combination of the trademark.

In principle, Trademark (for search) will not be changed after registration, except in the case of obvious errors.

U

■ Unregistered Mark

"Unregistrable trademarks" under the Trademark Act. This system makes it possible to search for marks, crests, insignias, seals, or symbols that fall under the following provisions.

- Trademark Act, Article 4-1(2)
- Trademark Act, Article 4-1(3)
- Trademark Act, Article 4-1(5)
- Trademark Act, Article 4-1(17)

W

■ Well-known Trademark

A registered trademark certified as being well-known in an opposition decision, trial decision, or judgment. This system handles opposition decisions published in trial decision gazettes issued after April, Heisei 18 (2006). This system makes it possible to search trademarks certified as being well-known trademarks in opposition decisions, trial decisions, and judgments.

■ WIPO

An abbreviation of "World Intellectual Property Organization". An international organization whose purpose is promoting the protection of global intellectual property rights, and that manages treaties pertaining to intellectual property rights.

■ WIPO-CASE (Centralized Access to Search and Examination)

The system is to share the dossier information provided by WIPO.
